OBITUARIES, CANADIAN.—*Jan. 11.*—FERLAND, L'ABBÉ, M. J. B. A. Ferland's reputation rests upon his literary productions, although he was at the same time a distinguished ornament of the Roman Catholic Church in Canada. While his productions have not been very numerous, they are held in great estimation, not only on account of their importance as contributions to historical literature, but for the reason of their being written whilst in the full pursuit of his arduous professional duties. He was descended from the family of Freland, formerly of Poitou, in Vendée, France, in the 17th century; a member of which emigrated to Can-

ada and settled on the Island of Orleans, near Quebec. Here the name was changed to its present style; and the father of the historian was married to a daughter of M. Lebrun de Duplessis, one of the four advocates who remained in Quebec after the conquest. M. Ferland was born at Montreal on the 25th of December, 1805. In 1813 his mother went to reside at Kingston with her son, and there he pursued his early studies. In 1816 he entered the college of Nicolet, where he remained until 1823, when he was admitted to holy orders; served for one year as under-secretary to Monseigneur Plessis, and afterwards became professor of arts, rhetoric, and philosophy, at Nicolet. In 1828 he was admitted to the priesthood; was vicar, and served at Rivière du Loup and St. Roch, Quebec; and acted as first chaplain of the marine hospital during the cholera of 1834. He was appointed curé of St. Isidore; and subsequently was given that of St. Foy, and in 1837 that of Ste. Anne de Beaupre. In 1841 he was appointed superintendent of students at Nicolet, and became superior of that institution in 1847. A year later he was called upon to reside at the archiepiscopal palace, Quebec. In 1855 he proceeded to France, for the purpose of gathering materials for an early history of Canada. In this expedition he was eminently successful; and on his return, published "*Observations on the History of Canada*," by l'Abbé Brasseur, and subsequently, "*Notes on the Registers of Notre Dame de Quebec*;" "*A Voyage to Labrador*;" lately the first volume of "*Courses of History of Canada from 1534 to 1633*;" and a "*Journal of a Voyage to the coast of Gaspé*," with other narratives. M. Ferland was a gentleman of much goodness of heart and amiability of manners, and was very generally esteemed.

He had been for a number of years Roman Catholic chaplain to her Majesty's forces in the garrison of Quebec.

April 15.—GALE, Hon. Mr. Justice, was the son of a Mr. Gale, who, born in Hampshire, England, came to America in 1770 as Assistant Paymaster to the Forces. The late Mr. Justice Gale was born at St. Augustine, East Florida, in 1783. He was educated at Quebec, while his father was Secretary, and came to study law at Montreal under the late Chief Justice Sewell in 1802, having the late Chief Justice Rolland and, we believe, Mr. Papineau as fellow-students. Mr. Gale was admitted to the bar in 1808, and ere long secured a large practice. In 1815 he was appointed a magistrate in the Indian territories, and accompanied Lord Selkirk when he went to the Northwest. Later, when Lord Dalhousie was attacked for his Canadian administration, he went home as bearer of memorials from the English-speaking Lower Canadians in the townships and elsewhere, defending his Lordship's conduct. In 1829 he became chairman of the Quarter Sessions, and in 1834 was raised to the bench to replace Mr. Justice Uniacke, who preferred to

resign the seat on the bench to which he had just been appointed rather than come back to Montreal during the cholera then raging there. Judge Gale retired from the bench in 1849, forced into retirement by continued ill-health and the gradual coming on of the infirmities of old age. He had married in 1839 a Miss Hawley, of St. Armand West. Born of parents who had both suffered for their loyal adherence to the British crown during the American Revolution, and educated in their views, Mr. Gale was, as long as he moved in politics, a staunch conservative and defender of British connection and British supremacy. He wrote a series of letters to the "Montreal Herald" (in those days the organ of the stoutest conservatism), over the signature of "Nerva," which produced a strong impression on the public mind at the time. And in espousing the cause of Lord Dalhousie and upholding the old constitution (under the title Constitutionalists taken by the conservatives of that day) against the advocates of democracy or responsible government, he was but consistently pursuing the course on which he at first set out. While upon the bench, he maintained in an elaborate and very able judgment the right of the crown to establish martial law in 1837, refusing to theorize about what abstract rights man had or ought to have, declaring simply and firmly what the law, as he read it, established the prerogative of the sovereign to be in a colony. Both as lawyer and judge he won the respect of his *confrères* alike by his ability and learning. Of late years his heart was most deeply interested in the freedom of the slave. He could not speak with patience of any compromise with slavery, and waxed indignant in denunciation of all who in any way aided, abetted, or even countenanced it. When the Anderson case was before the Upper Canada courts, he was one of the most active among those who aroused agitation. When the Prince of Wales visited the country, he got up a congratulatory address from the colored people of Canada, which however was not received, as the Prince was desired by the Duke of Newcastle not to recognize differences of race and creed wherever it could be helped. He was a man of high principle, and ever bore an unblemished moral character. Yet once in his early career at the bar he was forced by the then customs of society to go out in a duel. His antagonist was Sir James Stuart, who had quarrelled with him in court. Mr. Gale was severely wounded.

June 27.—McCord, Hon. J. S., one of the Justices of the Superior Court of Lower Canada. The deceased judge was born near Dublin, on the 18th day of June, 1801. His father, who had friends in Canada, emigrated in 1806, and settled there. He studied law in the offices first of the late Chief Justice Rolland, and subsequently in that of the late Mr. Justice Gale, and was called to the bar in 1822 or 1823. He continued to practise his profession until the outbreak of the rebellion in 1837, when he en-

tered the volunteer service, raising a cavalry corps, and becoming commandant of a brigade of cavalry, and for a time also of the whole militia force in Montreal. On the reorganization of the courts by the Special Council, he became a District Judge and Judge of the Court of Requests, and subsequently Judge of the Circuit Court. Later, on the reorganization of the Judiciary in 1857, he became a Judge of the Superior Court. He had thus been on the bench for twenty-three or twenty-four years, and in that time had done judicial duty in every portion of the old district of Montreal, embracing about half the population of Lower Canada. Although not standing foremost among the jurists who have won celebrity among the members of the bench and bar, he has yet proved an eminently useful and painstaking judge, whose decisions have uniformly stood the test of appeal more successfully than those of most other men upon the bench. Few or none of them have, indeed, been altogether set aside. Besides his soldiering for several years, he was for years a zealous student of natural history, and one of the founders of the Montreal Natural History Society. He was known as a student of meteorology, and contributed many important papers on that interesting branch of study. But the work into which he threw most of his heart and soul during his later years—next after his judicial duties, if not equally even with them—was the promotion of the interests of the religious community to which he belonged. A zealous, true-hearted member of the Church of England, he was also a warm friend and admirer of the metropolitan Bishop of Canada, and an ardent fellow-laborer with him in every thing which could promote the interests or welfare of the Church. He was successively vice-chancellor and chancellor of the University of Bishops' College, Lennoxville, which office he held at the time of his death. Owing to the illness and overtasking of several of the judges, the Beauharnois circuit had been on several occasions neglected, and the matter was brought up in Parliament by the representatives of that district. When urged by the Attorney-General to take the duty there for one term, and the difficulties of the Government pointed out to him—the blame, in fact, cast upon them by Parliament for neglect—he replied, "I will go, if it kills me." He held his last term there, and returned home ill. He was never fit for work afterwards.

Oct. —.—McLEAN, Hon. ex-Chief Justice, was born at St. Andrews, near Cornwall, U. C., in April, 1791. He was the son of the Hon. Neal McLean, M. L. C., and his mother was a daughter of an U. E. loyalist, Col. Macdonald. The son was educated at the Cornwall Grammar School, under Dr. Strachan, now Bishop of Toronto. He studied law in the office of Attorney-General Firth, at York, as Toronto was then called; but before he had been called to the bar he went through the American war as captain in the incorporated militia. While

assisting the aide-de-camp of Gen. Brock, after that brave commander had received his death-wound, he was wounded himself in the hip. Afterwards, in the engagement at York, he saved the colors of the York militia. He was taken prisoner at the battle of Lundy's Lane, and was sent to Greenbush, opposite Albany, New York, where he was detained till the peace. On the breaking out of the rebellion in Upper Canada, his old military instincts came back upon him, and he took an active part against the men who had assembled at Montgomery's tavern, near Toronto. After his return from his imprisonment at Greenbush, Mr. McLean was admitted to the bar; and soon after he was employed in a professional capacity in the difficulties that arose out of the contentions between the Northwest and the Hudson Bay Companies.

Mr. McLean represented Stormont and Cornwall, for several years, in the Legislative Assembly of Upper Canada, of which he was twice elected Speaker. He was appointed Judge of the Court of King's Bench, in the early part of 1837; but he continued to feel an interest in politics long after, and when the union of Upper and Lower Canada was proposed, he used whatever personal influence he possessed with members of the Legislature or otherwise in opposition to that measure. On the appointment of Mr. Justice Draper to the Chief Justiceship of the Common Pleas, Mr. McLean, fancying injustice had been done to him, resigned the Judgeship he had so long held. Mr. Macdonald had afterwards an opportunity of making what even Mr. McLean considered full amends, by appointing him Chief Justice of Upper Canada. This promotion was so wholly unexpected by the object of it, that at first he could scarcely believe the intelligence. Before he resigned the Chief Justiceship of the Court of Queen's Bench, his strength had given way. Mr. Sandfield Macdonald, when Attorney General, proposed that he should take the Presidency of the Court of Error and Appeal, a comparatively easy berth, which had been filled by Sir John Beverley Robinson before his death. Mr. McLean's integrity as a Judge was never questioned; he was much respected by the Bar; and his liberal hospitalities while on circuit will be long remembered.

Nov. 25.—PARKER, Chief-Justice. The deceased Chief Justice was the eldest son of Robert Parker, Esq., formerly Controller of H. M. Customs at the port of St. John, N. B. He commenced his studies in the office of Ward Chipman, Esq., afterwards Chief Justice of New Brunswick. Before entering upon the duties of the legal profession, Mr. Robert Parker, at the instance of his father, took charge of the Customs Department in Miramichi, on the occasion of a vacancy caused by the death of the previous incumbent. About the year 1816 he was called to the bar, and commenced his professional business in St. John. In 1819 he

married Susan, daughter of Lieut.-Col. Morris Robinson, formerly Barrack-Master General at Gibraltar. Mr. Parker was appointed to the vacant office of Recorder, which he held for four or five years, resigning it in 1829-'30. In 1826 he was elected to the Legislature, as one of the members for the county of St. John, and held the seat for some years, not, however, without contests with opposing candidates. He became Solicitor-General in 1828, and as Attorney-General, *pro tempore*, he had the management of the celebrated proceedings taken against John Baker for hoisting the flag of the United States on the territory in possession of Great Britain, but claimed by the United States, pending the settlement of the Northeastern Boundary question effected by the Ashburton Treaty. In 1834 a vacancy occurred in the bench of the Supreme Court by the death of Mr. Justice John Murray Bliss, and he was then elevated to the bench. How Judge Parker discharged the duties which now devolved upon him it is needless to say. Judge Parker's accession to the office of Chief Justice was so recent, that his discharge of the duties of that office, for a brief period, does not call for special remark. As a member of society, the heart of the deceased Chief Justice was in every good work. As President of the Bible Society, for a very long period, he loved to mark the growth and expansion of that truly noble Society, whose object is to publish the Word of God, "without note or comment," in all the languages of the world, and to supply a copy to every human being. He watched, as with parental fondness, the growth of the Society in New Brunswick, discharging the delicate duties which devolved upon him with the utmost assiduity and success.

OBITUARIES—EUROPEAN.—Sept. 1.—CASTELLANI, Chevalier FORTUNATO PIO, a celebrated Italian artist and designer in jewelry, died at Rome. His name had become noted throughout Europe, by the classic taste which he displayed in adapting the designs of ancient Etruscan artists to the exigencies of modern jewelry. His studio was always crowded by foreigners, and his classic necklaces, ear-rings, and bracelets, were carried to all parts of Europe as trophies of Roman taste.

Jan. 2.—THOMSON, RICHARD, an English antiquarian, and for more than thirty years librarian of the London Institute, died at his apartments there, aged 70 years. He was the author of a number of published works, among which were, "A Faithful Account of the Processions and Ceremonies observed in the Coronations of the Kings and Queens of England" (1820); "The Book of Life, a Bibliographical Melody dedicated to the Roxburghe Club" (1820); "The Chronicles of London Bridge" (1827); "Illustrations of British History" (1828); "Tales of an Antiquary" (1828); "Historical Essay on Magna Charta" (1829); "Legends of London" (1832); and a catalogue of the library.

Jan. 8.—DOBSON, JOHN, an English architect

of much celebrity, died at Newcastle, aged 77 years. He was born at Chirton, near North Shields, and early evincing some artistic talent, was carefully educated for the profession to which he devoted his life. Soon after attaining his majority he travelled in England and France, studying church architecture, and immediately after his return entered upon his work. As his reputation began to extend beyond the limits of his own country, he was called upon to design houses, churches, and castles, in other parts of England. The churches built from Mr. Dobson's plans were numerous, and among them may be mentioned that of St. Thomas, Newcastle; the Scottish church at North Shields, in 1818; Gesmond church, at Monkwearmouth; Lynn church, at Warrington, Cheshire; St. Stephen's, South Shields; St. Mary's, Jarrow, and St. Mary's, Rye Hill; besides schools built, cemeteries laid out, etc. The restoration of Lambton Castle for the Earl of Durham affords an instance of his inventive genius; the graving-dock, at St. Peter's shipyard, his talent as engineer, and the Central Railway-station at New Castle, his taste and skill as a designer. Mr. Dobson was also employed extensively by the Government on the Custom-houses at Glasgow, Newcastle, and Liverpool. The Royal Arcade, Newcastle, was from his designs, and he also executed several important hydraulic works. The result of his many years of industry and devotion to his department of art, will long afford a pleasing study for the profession in which he had attained the front rank.

Jan. 9.—SZEMERE, BERTALAN, a Hungarian statesman and author, died at Paris, aged 58 years. He was a native of Borsod County, received his early education at Miskolcz and Kázmárk, and took a course of philosophical and legal studies at Patak and Presburg. In 1836-'7 he travelled over a large portion of Europe, and subsequently held various public offices in his native country. He was appointed Minister of the Interior in the Batthyányi cabinet, being also elected representative of Borsod in the national assembly of Pesth, officiated for some months as commissary of the revolutionary government in Upper Hungary, and on the declaration of independence in Debreczin, was chosen by Kossuth President of the new ministry, with the portfolio of the Interior. He opposed the transfer of dictatorial power to Görgey, and after the surrender of the latter, escaped to Constantinople, and thence went to Paris, where he resided until his death. In exile he published, besides some minor writings, *L. Batthyányi, A. Görgei, und L. Kossuth*, and "Hungary from 1848 to 1860."

Jan. 9.—DOD, ROBERT PHIPPS, compiler of the "Parliamentary Companion," and "Peerage and Baronetage," died at Nant Issa-hall, near Oswestry, Shropshire, from the effects of an accident while shooting.

Jan. 10.—ILCHESTER, WILLIAM THOMAS HORNER FOX-STRAWGWAYS, fourth Earl of, died at

Melbury-house, Dorset, aged 69 years. He was educated at Christ Church, Oxford, and before quitting the University entered the diplomatic service. In 1816 he was attached to the embassy at St. Petersburg; at Constantinople, 1820; and at Naples, 1822. In 1824 he was appointed attaché at the Hague; in 1825 secretary of legation at Florence; in 1828 held the same office at Naples; in 1832 was secretary of embassy at Vienna; in 1835 was under-Secretary of State at the Foreign Office; and envoy extraordinary and minister plenipotentiary at Frankfurt-on-the-Main, from August, 1840, to 1849, when he retired upon a pension. He was a man of highly cultivated mind, and displayed a great fondness for horticultural pursuits.

Jan. 10.—CAMERON, REV. CHARLES RICHARD, rector of Swaby, died at Swaby, Lincolnshire, aged 85 years. He was educated at Christ Church, Oxford, and was the author of several sermons and pamphlets, among which are "Lectures on Confirmations;" "A Sermon on the Death of Nelson;" "Sayings and Doings of Popery;" "A Letter to Mr. Whitmore on the Corn Laws;" "A Pamphlet on the Sabbath Question, addressed to Archbishop Whately;" "Parochial Sermons;" "On the Antichrist of St. John;" "On the Revolutions of 1848;" and a "Poem on the New Moral World against Socialism."

Jan. 15.—HOARE, VENERABLE CHARLES JAMES, Archdeacon of Surrey, died at Goldstone, aged 83 years. He was privately educated, and was admitted a pensioner of St. John's College, Cambridge, from which he graduated with high honors in 1803. In 1806 he was elected a Fellow of his College, and the following year was presented to the Vicarage of Blandford Forum, in Dorsetshire, and in 1821 to the Vicarage of Godstone. In 1829 he was promoted to the Archdeaconry of Winchester; and in 1831 to a canonry in that cathedral. In 1847 he was translated to the Archdeaconry of Surrey, which he resigned in 1860, on account of failing health, consequent upon his great age. Among his many publications may be mentioned: "Seven Charges as Archdeacon of Winchester, with Notes;" "The Course of Divine Judgments; eight Lectures, principally in reference to the Present Times, and the impending Pestilence" (1832); "Memoir, with Remains of the Rev. Charles John Paterson;" "Tendency of Principles in Tracts for the Times" (1841); "Baptism, or the Ministration of Public Baptism of Infants, to be read in the Church, Scripturally illustrated and explained;" "Holy Scriptures and Essays," besides many other sermons and theological essays.

Jan. 15.—RITCHIE, LITCH, an English editor and novelist, formerly one of the editors of "Chambers' Cyclopædia," died at Edinburgh, aged 64 years. He was a native of Greenock, and early entered a banking-house in his native town, but subsequently went to London, where he became an author by profession, editing in succession, "The Englishman's Magazine," "The

Era," and "The Indian News." He also edited the "Library of Romance," and wrote the letter-press for "Turner's Annual Tour" and "Heath's Picturesque Annual," to collect materials for which he made annual journeys over the Continent of Europe. He edited twelve volumes of these works, and published in the mean time novels entitled "The Magician" and "Schinderhannes, the Robber of the Rhine." Besides several other novels, he published in 1857 "Weary-foot Common," and the following year, "Winter Evening Sketches and Essays."

Jan. 18.—NEILSON, JAMES BEAUMONT, civil engineer, died at Queenshill, aged 72 years. He was a native of Shettleston, near Glasgow, and was brought up as a working mechanic, though not without some educational advantages. Some accidental circumstances led him in the course of his studies and experiments to direct his attention to the process of smelting iron, and after much perseverance he ultimately satisfied himself that a vastly increased and improved action of the artificial blast employed in furnaces could be obtained by heating the air in its passage from the blowing cylinder into the furnace, and thus resulted the hot-blast, a process which completely revolutionized the iron trade.

Jan. 21.—HUMPHREYS, WILLIAM, a skilful line engraver, died at Geneva, Switzerland, aged 71 years. He was formerly from Philadelphia, from whence he went to London, where he engraved many fine pictures, including "Sancho and the Duchess," by Leslie, and "Young Lambton," by Lawrence.

Jan. 22.—BONIFACE, J. (X. B. Saintine), author of *Picciola*, died at Paris, aged 66 years. He was exceedingly successful as a writer, and his name is enduringly connected with several most popular pieces, especially *L'Ours et la Pacha* and *Riches d'Amour*. At the time of his death he was Honorary President of the Société des Gens de Lettres.

Jan. 23.—CHARRAS, JEAN BAPTISTE ADOLPHE, a French republican soldier, statesman, and author, died an exile in Belgium, aged 55 years. He was a native of Pfalsburg, in the department of the Meurthe, took part in the Revolution of 1830, was promoted in 1833 to the rank of lieutenant, and for writing a series of articles in the "National" on military affairs which gave umbrage to the Government, was sent to Algeria. Here he distinguished himself on the battle-fields as well as in the training of native troops and the colonization of the country. After the Revolution of 1848, he became under-Secretary of State and representative for the department of Puy de Dôme. He was one of the chief pillars of the Republican Government, and a victim of the *coup d'état* of December 2, 1851. In January, 1852, he was transported to Belgium, but two years after was expelled from thence at the request of Napoleon, whom he had denounced on many occasions. Since December, 1857, however, he has been permitted to reside

there. He was the author of *Histoire de la Campagne de 1815*, published in 1857, and *Les Trois Maréchaux de France* (1858). The former work is not allowed to enter France.

Jan. 31.—WHITE, ROBERT MEADOWS, D. D., Professor of Anglo-Saxon in Magdalen College, Oxford, Rector of Slimbridge, near Stonehouse, Gloucestershire, and an author of some note, died at the rectory, aged 67 years. He graduated at Magdalen College in 1819, was ordained deacon in 1821, priest in 1822, and in 1832 became college tutor, holding the office for several years. In 1834 he was elected Rawlinson Professor of Anglo-Saxon, and was vice-president of his college in 1838. At that time he enjoyed the character of domestic historian and antiquary of his college, besides being the chief authority in the English language. With all his other literary labor, he assumed the editing of the poem "Ormulum," preserved in the Bodleian Library, a work which he had in hand nearly twenty years; and in order to do full justice to that portion containing Danish expressions, and gain a knowledge of the Danish language, he visited Denmark in 1837. Dr. White was a correspondent of most of the English philologists, Dr. Bosworth, Benjamin Thorpe, Mr. Garnett, and others.

Jan. 31.—FALCONER, HUGH, M. D., an eminent British naturalist, and President of the Royal Society, London, died at his residence in Park Crescent, aged 55 years. He was educated at King's College, Aberdeen, and in 1826 went to Edinburgh, where he entered upon and completed his medical studies. Subsequently he entered the East India Company's service as assistant-surgeon, where his acquisitions in the study of botany won for him the superintendence of the botanical gardens at Serampore, and latterly at Calcutta. In this occupation (with the exception of the usual furlough to Europe) he passed twenty years of his useful and valuable life, returning to England with shattered health about two years ago, to pursue the same career with unabated ardor. In the domain of Indian botany he may be said to have created the teas of Assam, the first successful attempt to transfer the tea-plant of China to a foreign region. But perhaps the most striking of Dr. Falconer's discoveries were those in the department of palæontology, where he might be considered almost equal to the Cuviers, the Owens, and the Lyells. From the lowest range of the Himalayas he made, arranged, described, and carried to England the largest collection of fossilized organic remains which was ever made. In this pursuit he travelled extensively, and but a few months previous to his death he inspected the caves of Gibraltar, in which he found the fossilized bones of man with those of mastodons, elephants, etc. Dr. Falconer was a thorough master of geology, botany, and zoology, was well versed in ethnology and archæology, and was both a classical and oriental scholar. Among his published works are "Fauna Antiqua Sivalonis, being the

Fossil Zoology of the Sewalik Hills in the North of India," and a "Descriptive Catalogue of the Fossil Remains of Vertebrata in the Museum of Bengal." He was also a large contributor to the Geological and Philosophical Transactions.

Jan. —.—BOUILLET, M., French lexicographer and author, died in Paris, aged 66 years. During the greater part of his life he was professor of literature in the University of Paris. In 1840 he was named Principal of the College Bourbon (now Lycée Bonaparte), and held that post until some disturbance by the students, which he ineffectually tried to quiet, caused him to be removed. In 1850, however, he received compensation in being named honorary member of the Council of the University, Inspector of the Academy of Paris, and subsequently Inspector General of Public Instruction. So far back as 1826 he published his "Dictionnaire Classique de l'Antiquité Sacrée et Profane," on the plan of Lemprière. His "Historical and Geographical Dictionary" appeared in 1842, in one volume stout 8vo, and containing more than two thousand pages, double columns, closely but legibly printed. This was at once accepted as the best book of the kind that had appeared in France, and it may be doubted if a more concise and satisfactory work of reference exists in any language. In Paris Bouillet's book was recommended by the University, and adopted by men of letters and men of the world; and at the present moment it may be found in almost every counting-house and on almost every writing-desk in that city. Though it had been approved by the Archbishop of Paris, it was attacked in the Ultramontane "Univers;" and, to his great surprise and regret, M. Bouillet found that his inoffensive book was included in the Index Expurgatorius. He made a journey to Rome for the purpose of remonstrating or explaining, and succeeded not only in removing the interdict, but in getting the approval of the Holy See. It is understood that the "Dictionnaire" has gone through eighteen editions. The "Dictionnaire des Sciences, des Lettres, et des Arts," has also gone through several editions.

Jan. —.—ROMANI, Signor FELIX, an Italian librettist, died at Geneva, Switzerland, aged 75 years. He was a native of Genoa, and was one of the few whose poetry has obtained celebrity apart from the musical associations with which it was connected. His most successful productions were the librettos of the operas *Norma* and *L'Elisir d'Amore*.

Feb. 1.—GRANGER, RICHARD DUGARD, F. R. S., an eminent medical author and lecturer, died at Highgate, London, aged 63 years. He was formerly Lecturer on Physics and Structural Anatomy at St. Thomas's Hospital. He was the author of "Elements of General Anatomy, containing an Outline of the Organization of the Human Body" (1829); "Observations on the Structure and Functions of the Spinal Cord" (London, 1837); "Observations on the Cultivation of Organic Science," and "Sanitary

Report on Epidemic Cholera, as it prevailed in London, in 1848-'49."

Feb. 12.—NORTHUMBERLAND, ALGERNON PERCY, fourth Duke of, K. G., and an Admiral in the Royal Navy, born December 15, 1792; died at Alnwick Castle, Northumberland, February 12, 1865. He was descended through the female line from the ancient family of Percys, was educated at Eton College, entered the naval service in 1805, and in 1809, as midshipman of the *Hydra*, commanded a gunboat in coöperation with the Spanish patriots on the coast of Andalusia. As acting captain of the *Caledonia*, he took part in a partial action with the French fleet off Toulon in 1813, and was present at the taking of Genoa, in 1814. He became commander in March, 1814; captain in August, 1815; rear-admiral on the reserved list in November, 1850; vice-admiral July, 1857; and admiral in October, 1862. In 1816, during the lifetime of the second duke, his father, he was called to the House of Lords, by the title of Baron Prudhoe, of Prudhoe Castle. But he had no taste for public life, and he employed his energies in travelling in the East, where he found abundant opportunities to gratify his taste for the higher pursuits of archæology and for researches into the early history of nations. Several Coptic manuscripts, as well as sculptures and coins of various countries, were collected by him during his travels, and the national collections of Egyptian antiquities in the British and other Museums are greatly indebted to his liberality. In recognition of his contributions to the advancement of literature and the interests of art, the University of Oxford conferred on him in 1841 the honorary degree of D. C. L. He was a Fellow of the Royal Society, of the Society of Antiquarians of London, of the Royal Geographical Society, and the Royal Astronomical Society. He was also a member of the Royal Society of Antiquaries of Copenhagen, a Director of the British Museum, and President of the Royal United Service Institution. In 1847 he succeeded his brother in the titles and possessions of his ancestors, and from that time devoted liberally of his abundant resources to the interests of church and charitable institutions, as well as to those of science and literature. Particularly was he interested in the welfare of the sailor, and in 1856 was completed at his expense the Sailors' Home, at North Shields. On the formation of the Derby cabinet in 1852, the late Duke became the first Lord of the Admiralty, and remained in the Cabinet until the breaking up of the Government in December of that year. On taking office he was made Privy Councillor, and, in the same year, a Knight of the Garter. In 1857 a handsome quarto volume was produced under his auspices, for private distribution, containing a series of architectural illustrations of the antiquities of the county of Northumberland, with descriptive letter-press and tables of the descent of the Percy family. An illustrated

edition of his valuable Egyptian Museum, by an able Egyptologist, was in forwardness at the time of his decease. He acquired in 1856, at Rome, the famous Camuccini collection, the most valuable gallery which, for many years, has been permitted to leave Italy, consisting of seventy-four paintings, and which are described by Waagen in the supplement to his "Galleries of Art in Great Britain." Having no issue, the Duke is succeeded by his cousin the Earl of Beverley.

Feb. —.—PACHA, PIR MEHEMET, a negro Turkish admiral, died at Eyoub, Turkey.

March 17. —MATHIEU, M. (de la Drôme), a French meteorologist and author, died at Romain, France, aged 57 years. He was in early life an ardent politician, and professed the more advanced doctrines of democracy. Some time previous to the Revolution of 1848, he, in conjunction with a few friends of like views, formed at Romain an association to which he gave the name of the *Athénée de Belles Lettres*, but the ideas promulgated there proving incompatible with the existing institutions, his conferences were prohibited and the lecture-room shut up. He then founded a journal in which he advocated the socialist doctrines which formed the staple of his teaching in the Athenæum. When the Republic was proclaimed, the Department of the Drôme elected M. Mathieu to the National Assembly, and he was reelected in 1849. On the night of the *coup d'état* he was arrested. Banished from France, he first took up his residence in Belgium, and subsequently in Chambéry, where he gave up politics and devoted himself to science. He invented a musket revolver, and extracted a gas from resin with which he made some experiments at Marseilles. The latter portion of his life he turned his attention to the study of meteorology, and the publication of his almanacs. These had an immense circulation, some of the predictions concerning the weather being so strikingly verified that among the lower classes he was considered a prophet.

March 20. —TROYON, CONSTANTINE, a distinguished French artist, died in Paris, aged 52 years. He was a native of Sevres, studied under Riocreux, exhibited for the first time in 1833, and worked uninterruptedly until worn down by fatigue and over-exertion. He was the rival of Landseer and Rosa Bonheur. His "Bœufs au Labour," "Return from the Farm," and "Starting for Market," will hand down his name to posterity as an animal painter of the first order of merit. He left a large fortune.

March 24. —KISS, Prof. KARL AUGUST, a German sculptor, died in Berlin, aged 68 years. He was a native of Silesia, and at the age of twenty became a pupil of Rauch at the Academy of Berlin. The group of the Amazon and the Tiger first brought him into notice. Among his other principal works are a statue of Frederic the Great, two of Frederic William III., and St. Michael overthrowing the Dragon.

March —.—SCHOTT, Dr. H., Director of the Botanical and Geological Garden at Schönbrunn, near Vienna, died there. He travelled extensively in the Brazils early in this century, and had published many sterling works upon those branches of science which he cultivated.

April 1. —PASTA, Madame GIUDITTA, an eminent opera-singer, died at her villa near Lake Como, Italy, aged 66 years. A Jewess by birth, her first musical education was derived from the *maître de chapelle* of Como Cathedral. At the age of fifteen she became a pupil at the Milan Conservatory of Music, and five or six years later she came out at the Venice and Milan Operas. In 1821 she appeared on the Paris stage, and in the following year she sang at Verona to the members of the Congress. From 1824 to 1830 is generally considered to have been the most brilliant period of her career. Managers fought and masters composed for her. Bellini composed "Norma" and the "Sonnambula" that she might sing in them, and for her Pacini wrote his "Niobe." Her face was not prepossessing, neither could her voice be compared to that of many other celebrated singers of that time and of the present day; but the sense of the beautiful was so strong within her, so tenacious was her determination to attain to a high position in her art, that it conquered every thing; and in spite of failures in Italy and France, which embittered the commencement of her career, she succeeded in placing herself at the head of that band of illustrious artists which it is hard to believe will ever be surpassed or even equalled. The extent of her voice was remarkable. In her prime she is said to have had the full range of two and a half octaves. It must be nearly thirty years since she left the stage, but she once afterwards quitted her Como retreat to sing at St. Petersburg, for a very large remuneration.

April 11. —WITHERINGTON, W. F., an English painter of much note, died in London, aged 79 years. In 1805 he became a student of the Royal Academy, and in 1811 exhibited at the British Institution a picture of "Tintern Abbey." He became an A. R. A., and in 1830 and in the following year exhibited the "Corn-Field." Among his best pictures are some which have figure subjects; of these "The Hop-Garden," which forms part of the Sheepshank's gifts, now at South Kensington, is perhaps the best. Among other paintings of note are "The Stepping Stones," "John Gilpin," "Sancho Panza," and "Don Quixote." In 1840 he was made R. A.

April 14. —GRESSLY, ARMAND, a celebrated Swiss geologist, died near Berne, in the 52d year of his age. Born near Laufen, he began to roam about in the mountains and valleys of the Jura almost as soon as he could stand on his feet. At Strasburg, where he went to study medicine, he was present at the meeting of the Geological Congress, and began to love this science, to which he afterward entirely devoted

himself, and in which he soon distinguished himself so much as to be undisputedly the first authority in geological questions of the Jura Mountains. His work on the Solothurn Jura, published by him and his friends Desor and Agassiz, at once established him as such. Unselfish to a point which became imprudent, he practised his science for the sake of science alone. Buried among the clay and stones of the mountains, hammering, digging, and scratching for days together, he cared for nothing else, and was entirely oblivious of any claims of society on him. Gressly's geological studies for the piercing of the Hauenstein gave evidence of a truly admirable penetration and sagacity; with the greatest accuracy he pointed out the depth of the different beds and strata. If his advice had been followed in every particular and his warning been listened to, the terrible catastrophe in the Hauenstein tunnel, which cost so many lives, would not have happened. His services in the building of the Jura Railway were equally great. Some years later he accompanied his friend Desor to the Mediterranean, for the purpose of scientific examinations, and another friend and well-known natural philosopher, Prof. Karl Vogt, in his voyage to Iceland, Norway, etc.

April 16.—**LUCAS, SAMUEL**, editor of the London "Morning Star," died in London, aged 54 years. He was a native of Brighton, a man of fine abilities and earnest convictions, and thoroughly identified with the Liberal party in England. Well versed in the knowledge of public affairs, his party possessed in him an able and untiring champion, while at the same time his catholic spirit and amiable temper rendered him more than popular with all who knew him. He was identified with all the social reforms of his time. He founded the Manchester Public Schools Association, after the plan of the United States and Canadian systems—not without opposition. He was an active member of the Anti-Corn-Law League. He helped to repeal the narrow-minded restrictions on the publishing of English newspapers, and took an active part in the formation and direction of the Constitutional Defence Association, which had its origin in the attempt of the House of Lords to control the taxation of the country, and its reward in the ultimate triumph of the Commons. He was also one of the originators of the Emancipation Society. During the late war between the North and South, he was a warm supporter of our Government, upholding it with earnest vigor through much opposition. Mr. Lucas was a brother-in-law of Mr. Bright, and an intimate friend of Mr. Cobden.

April 24.—**MITCHELL, JOHN MITCHELL**, Knight of the Order of Leopold, and Belgian Consul-General for Scotland, died near Edinburgh, aged 70 years. He received a good education at the Polmont School, and was afterwards sent to the University of Edinburgh. For nearly fifty years he was in business as a

merchant of Leith, and was for a great part of the time Belgian Consul-General; but these duties, discharged in the most energetic manner, still left him time, which he devoted to literature and archaeology. He was deeply versed in archaeological science, and had an accurate and comprehensive knowledge of natural history, mineralogy, and kindred sciences, and was also familiar with most of the languages of the Continent. He contributed many interesting papers to the Antiquarian and other societies with which he was connected, besides preparing several works for the press, among which was a quarto volume, published in 1863, giving illustrations of the Runic literature of Scandinavia, with translations in Danish and English of the inscriptions found in the mound at Mesehowe, Orkney, which was opened in 1861. He was also the author of an elaborate work on "The Herring; its Natural History and National Importance."

April 24.—**RUSSIA, NICHOLAS ALEXANDROVITCH, CZAREWITCH** of, eldest son of the Emperor Alexander II., and the Empress Maria, and heir-apparent to the imperial throne, died at Nice, France, aged 21 years. He was a young man of fine scholarship, but having a delicate constitution, unlike his father and grandfather, he displayed no predilection for a military life; but, as a matter of course, he was officially connected with the army, holding a high rank, not only in the Russian army, but in the Prussian also. The betrothal of the Grand Duke to the Princess Dagmar, second daughter of the King and Queen of Denmark, took place in October last, at Copenhagen, and was afterwards ratified by a decree of the Emperor of Russia, in accordance with a law established by Alexander I. The Grand Duke had long suffered with what was believed to be a rheumatic affection, and for this a short residence in the south of Europe was proposed by his physicians; but the expected relief was not obtained, and he survived only a few weeks.

April 25.—**KMETZ, Gen. GEORGE** (Ismail Pacha), an officer of the Imperial Turkish, and the late Hungarian armies, died suddenly in London, aged 51 years. He was a native of Hungary, and the son of a Protestant clergyman; was educated at the Protestant College at Eperies, and the Protestant Lyceum of Presburg, where he contended for a scholarship in a German university, and was successful. In consequence, however, of an error on the part of the clerk of the committee with whom the decision rested, the reward was bestowed on another person of the same name. This disappointment drove him to the army, where his rapid advancement proved his faithfulness to duty. On the breaking out of hostilities between Austria and Hungary, he received the command of a battalion in the Hungarian army, and won himself great honor. Subsequently he was made general, and appointed to the command of a detached division, with which he routed the Austrians at Csorna. When the

Turks were threatened with war by Austria and Prussia, because of their hospitality to the Hungarian exiles, Gen. Kmety attached himself to the Turkish service. In 1851 he returned to England, and having no means at his command, studied music, in order to qualify himself for giving lessons. But the outbreak of the Eastern war led him back to his true vocation. He again offered his services to the Turks, and was placed in command of a division during the blockade of Kara, under the name of Madjar Ismail Pacha, inflicting on the Russians one of the most sanguine defeats they sustained during the whole war. For his gallant services in this campaign he was named lieutenant-general, and decorated. The massacres of Syria next called him into the field. He was placed in command of a division, and arrived just in time to put a stop to further disorders. Soon after, he retired to England, with a liberal pension.

April 27.—PHILLIMORE, JOHN GEORGE, an English legal and historical writer of great ability, died at his residence at Shipplake House, Oxfordshire, aged 55 years. He was educated at Westminster and Christ Church, Oxford, and called to the bar at Lincoln's Inn in 1832. In 1851 he was made Queen's counsel, and from 1862 to 1857 represented Leominster in Parliament. He was the author of several legal and political works, among which may be named "Legal Reform," "A History of the Law of Evidence," "An Introduction to the Study and History of Roman Law," "Lectures on Jurisprudence and Canon Law," "Principles and Maxims of Jurisprudence," and "Private Law among the Romans." In 1863 he produced the first volume of "The History of England during the Reign of George III.," which is unfortunately left incomplete by his death.

April 28.—CUNARD, SIR SAMUEL, Bart., died in Prince's Gardens, aged 77 years. He was for many years the head of the firm of Cunard & Co., to whose enterprise and ability the present rapid steam communication between England and this country is mainly owing. In recognition of these services he was made a baronet in 1859.

April 28.—WILLIAMS, WILLIAM, M. P., a leading liberal politician and writer, died at his residence, Park Square, Regent's Park, aged 76 years. He was descended from a good yeoman's family, and his education was necessarily obtained under great difficulties. These difficulties were so much felt by him in after-life, that he took a special interest in drawing the attention of the legislature to the cause of education among the middle classes. In 1846 he brought this subject before the House of Commons, upon which a commission of inquiry was issued, and in 1848 he made further efforts by publishing a letter to Lord John Russell, First Lord of the Treasury, on the report of the "commissioners who had been appointed to inquire into the state of education in Wales,"

followed in December by a letter on its then defective state. Having commenced business as a clerk in a warehouse in London, he rose by his own efforts to a high position, and subsequently set up an establishment upon his own account, where he made in time a comfortable fortune. About the year 1820 he became interested in politics, and not long after was a member of the common council for his ward. In 1835 he was returned to that assembly for the city of Coventry. In 1847 he retired from business and spent some time travelling through the United States. In July, 1850, a vacancy occurred for the borough of Lambeth, and Mr. Williams was returned; he was also reelected in 1852 and in 1857, representing that borough until his death.

April 30.—OLLENDORFF, H. G., Ph. D., grammarian and linguist, died in Paris, aged 60 years. He was a German Jew, of unprepossessing appearance. His method of teaching French and German was both popular and successful. His books had an immense sale both in Europe and this country, and, as he was his own publisher, his income was very large.

April —.—STÜLLER, M., a celebrated architect in Prussia, died at Berlin, aged 64 years. He was a native of Berlin, and a pupil of Sinkel, with whom he remained until he had attained his 30th year. Having obtained the patronage of the King of Prussia, he undertook and executed, between the years 1840 and 1850, an immense number of important constructions. Besides a vast number of private residences, he built the Council Chamber of Perleberg, the new Winter Palace of St. Petersburg, the Bourse of Berlin, and that of Frankfurt, and the new Berlin Museum, which ranks first among his works. He built several churches, added new apartments to the palace at Potsdam, finished the gardens of Sans Souci, erected the palace of the Grand Duke of Mecklenburg-Schwerin in Berlin, and yet found time to make an immense number of designs for goldsmiths' work and porcelain. In 1835, in conjunction with M. Stack, he published a volume entitled "Designs for Cabinet Work."

April —.—PICCOLAS, NICHOLAS, a Greek litterateur, died at Paris, aged 72 years. He was a native of Thessaly, and commenced his studies at Bucharest, whence he, early in life, removed to the University of Paris. Here, in 1823, he became acquainted with the late Earl of Guilford, under whose auspices he occupied the chair of philosophy at Corfu. Afterwards he studied medicine at Bologna, where he took his doctor's degree, and removed to Paris, in which city he continued to reside until his death. He translated Descartes' *Méthode pour bien conduire la Raison*, also *Paul et Virginie*, and other works of St. Pierre. He added a supplement to the *Anthologia Græca*, and very recently published *L'Histoire des Animaux d'Aristotle*, a work which was the labor of a life. To these must be added a critical edition of Longus, and several other classical works.

May 4.—**CHRISTY, HENRY, F. R. G. S., F. G. S.**, etc., an English antiquarian, naturalist, and palæontologist, died at La Palisse Allier, France, aged 54 years. He was a native of Woodbine, Kingston-upon-Thames. His early years were devoted to business as a partner in a manufacturing interest, and afterwards he succeeded his father as director of the London Joint Stock Bank. Having a decidedly antiquarian taste, he devoted much time to travel, for the purpose of observing the primitive customs of the more remote tribes of men, collecting arms, implements, dresses, and other relics, with great perseverance and industry. His explorations extended throughout Mexico, a portion of the United States, Canada, British Columbia, the East, Algeria, and the north of Africa, Spain, Italy, France, and the Scandinavian kingdoms, and during his travels he established close and intimate relations with the scientific men of the countries which he visited. He made liberal contributions to the British Museum and other like institutions, and was ever ready to advance the interests of these departments of science. Of late years his attention had been more particularly directed to the discoveries tending to prove the antiquity of man, and he explored, at a considerable sacrifice of money and time, the rock shelters that line the banks of the Vézère, in Dordogne; the results of which discoveries were to be embodied in a work of considerable extent. Mr. Christy's life was consecrated to works of beneficence. The starving poor of Ireland, the Arabs of Algeria, the negroes of Africa, the Indians of the British North American colonies, the oppressed in Syria, and more recently the unfortunate Danes, have reason to bless him as a benefactor. He was a Fellow of most of the metropolitan scientific societies.

May 12.—**TREVELLYAN, RALEIGH**, an English scholar and author, died at Netherwilton Hall, Northumberland, aged 83 years. He was educated at Eton, and St. John's College, Cambridge, where he graduated M. A. in 1807. In 1810 he was admitted to the bar of Lincoln's Inn; but on inheriting the family estates at the death of his brother, he relinquished the active duties of his profession. In politics he was a staunch Conservative, as his published works indicate, viz.: "Parliamentary and Legal Questions" (1832), and "Radical Sketches of Times and Men, Political and Legal." He was also the author of "Poems and Essays" (1819); "A Poetical Sketch of the Ten Commandments, with other Poems;" "The Christian Inheritance, a Sermon," and "Domestic Forms of Prayer for Night and Morning."

May 19.—**BIGG, JOHN STANYAN**, an English author, died at Ulverston, aged 86 years. He spent some years in Ireland, during which he edited the "Downshire Protestant;" since which he has resided in Ulverston, engaged in editorial and literary work. He was better known in this country by his "Night and the Soul," a poem, which was republished here.

May 30.—**KENNEDY, Sir JAMES SHAW, K. O. B.**, an eminent British officer, died at Bath, England, aged 70 years. He was educated at the Royal Military College, entered the army in 1805, as ensign in the 43d regiment, served in the siege of Copenhagen and battle of Kioge, was severely wounded at the action of Almeida, and won much distinction at the siege of Ciudad Rodrigo, and later, at the storming of Badajoz, the action of Salamanca, and the occupation of Madrid. He also shared in the glories of Waterloo, and, after the war was over, commanded at Calais, during the three years of the army of occupation, the establishment formed to keep up the communication between the army and England. He served nine years as assistant adjutant-general at Manchester, assisted in organizing the constabulary force in Ireland, and after attaining the rank of major-general in 1846, was named by the Duke of Wellington to several very important commands. Sir James was made general in 1862. His "Notes on the Battle of Waterloo, and Plan for the Defence of Canada," with a brief memoir of his life and services, was published in 1865.

June 1.—**GREY, Right Hon. Sir CHARLES EDWARD, G. C. H.**, Chief Justice of the Supreme Court of Bengal, died at Tunbridge Wells, aged 79 years. He was educated at University College, Oxford, where he graduated in 1806. In 1811 he was called to the bar by the Society of Lincoln's Inn. In 1820 he was knighted on being appointed a judge of the Supreme Court of Madras, and in 1825 was transferred to the Chief Justiceship of the Supreme Court of Bengal. In 1835 he was appointed Commissioner for the affairs of Lower Canada, and on his return was made a Privy Councillor and received the Hanoverian Order. He was Governor of Barbadoes, St. Vincent, Trinidad, and Lucia, from 1841 to 1846, when he was appointed Governor of Jamaica. For a period of about four years he represented the borough of Tyne-mouth in the House of Commons.

June 2.—**KENNEDY, W. DENHOLM**, landscape and figure painter, died at his residence, Soho-square, London, aged 51 years. He was a native of Dumfries, Scotland; received his early education in drawing at the Edinburgh School of Art, and at the London Academy, where he won some honors, and in 1820 travelled in Rome. The list of his works is very long, but among the most important may be mentioned, "The Italian Goat-herd," "Gil Blas," "The last of all the Bards was he," and the "Wardens." His representations of Italian scenes won him great credit for their beauty and perfectness.

June 8.—**PAXTON, Sir JOSEPH, M. P.**, an English architect, died at Rock Hill, Sydenham, aged 61 years. He was a native of Woburn, where he was educated at the Free School, became a gardener, and subsequently director of the gardens and grounds at Chatsworth, owned by the Duke of Devonshire, and manager of his Derbyshire estates. The grand conserva-

tory at Chatsworth was entirely the production of Mr. Paxton, and was in fact the parent of the far more famous Crystal Palace; and the costly and beautiful gardens and terraces, fountains, and water-works of these grounds, served as models for the nobler gardens, terraces, and fountains of the Crystal Palace. After the completion of the latter great achievement, Mr. Paxton seemed inclined to pursue the profession of an architect, but his only work of consequence was a costly mansion for the Baron James Rothschild. He also devised a plan for girdling London with a magnificent arcade, resembling the transept of the old Crystal Palace, in which were to be included lines of railway worked on the atmospheric principle. In 1854 he was elected Member of Parliament for Coventry, and continued to represent that borough until his decease. He was the author of a "Practical Treatise on the culture of the Dahlia" (1838), and a "Cottage Calendar." He also edited "Paxton's Flower Garden," "Horticultural Register," and "Botanical Magazine."

June 11.—WRAXHALL, FREDERIC CHARLES LASCELLES, an English author and translator, died in London, aged 37 years. He was a native of Boulogne, educated at St. Mary's Hall, Oxford, studied modern languages on the Continent, and in 1855 was appointed assistant commissary of the field train in the Turkish contingent, with the rank of captain. He had been a frequent contributor to periodical literature since 1850, had charge of the "Naval and Military Herald" in 1858, and from January, 1860, to March, 1861, was editor of the "Welcome Guest." Among his translations may be mentioned Victor Hugo's *Les Misérables*. He was the author of a "Hand-book to the Armies of Europe" (1855); "Wild Oats" (1857); "Armies of the Great Powers" (1859); "Only a Woman" (1862); "Life on the Sea"; "The Backwoodsman; or, Life on the Indian Frontier"; and "Golden Hair," a tale of the Pilgrim Fathers.

June 13.—SOUTHEY, HENRY HERBERT, M. D., a medical author, and brother of the poet, died in London, aged 81 years. He graduated at Edinburgh in 1806; became a Fellow of the Royal College of Physicians in 1812; was an honorary D. C. L. of Oxford, and Fellow of the Royal Society. His chief reputation was in cases of lunacy, and he was for many years examiner of lunatics under the Court of Chancery. He was physician in ordinary to George IV., and physician to the London Hospital. He was author of a variety of medical works, the chief of which was one "On Pulmonary Consumption."

June 18.—COOKE, GEORGE WINGROVE, an English author, and Copyhold and Enclosure Commissioner, died in London, aged 52 years. He was educated at Oxford, and early became known as an author by his "Memoirs of Lord Bolingbroke," his "History of Party," and his "Life of the First Lord Shaftesbury," works

evinced much laborious research. In January, 1835, Mr. Cooke was called to the bar of the Middle Temple, and shortly after achieved for himself an enviable position in his profession by several able treatises, as well as some valuable tracts upon different branches of law reform—among which may be mentioned "The Law of Defamation," "Law of Copyhold Enfranchisement," and the "Law of Agricultural Tenancies and Leases." Mr. Cooke was for a number of years largely employed, under the Tithe Commutation Commission, in adjusting disputes relative to moduses and claims to exemption, during the long period that all tithes throughout the kingdom were undergoing the process of extinction, a work involving an immense amount of labor. He was also the author of "Conquest and Colonization of Africa," "Inside Sebastopol," and "China and Lower Bengal," works embodying his observations during his vacation rambles. He received his appointment of Copyhold and Enclosure Commissioner in 1861.

June 20.—LUBBOCK, Sir JOHN W., Bart., F. R. S., astronomer and physicist, died at Farnborough, Kent, aged 62 years. He was a native of London, and graduated at Eton, and at Trinity College, Cambridge, in 1825. Though the head of a London banking firm, he devoted much attention to scientific pursuits. He was Treasurer of the Royal Society for many years, and also was Vice-Chancellor of the University of London. In 1834 the Royal Society awarded to him one of their royal medals for his papers on the Tides. In 1836 he delivered the Bakerian Lecture "On the Tides at the Port of London," and the Astronomical Society in 1848 gave him a testimonial for his researches on the theory of perturbations. On the death of his father in 1840 he succeeded to the baronetcy. In 1852 he served the office of sheriff of Kent, and the same year was appointed a deputy-lieutenant of that county. The following are among his published works: *Account of the Traité sur le flux et reflux de la Mer* of Daniel Bernoulli; and a Treatise on the Attraction of Ellipsoids (London, 1830); "On the Theory of the Moon and on the Perturbations of the Planets" (London, 1833); "Mathematical Tracts" (Lond., 1834); "A Treatise on Probability" (Lond., 1835); "On the Determination of the Distance of a Comet from the Earth, and the Elements of its Orbit" (Lond., 1835); "An Elementary Treatise on the Computation of Eclipses and Occultations" (Lond., 1835); "Remarks on the Classification of Human Knowledge" (Lond., 1838); "On the Heat of Vapors, and on Astronomical Refractions" (Lond., 1840); "On the Clearing of the London Bankers" (Lond., 1860); "The Stars in Six Maps, on the Gonomic Projection" (Lond., 1860); besides numerous papers on different subjects in the Philosophical Transactions and other scientific periodicals.

June 20.—THORNTON, RICHARD, an English merchant and philanthropist, died at Surrey,

aged 88 years. He was a native of Lonsdale, educated at Christ's Hospital, London, and early in life entered the mercantile business in Southwark. In 1798 he became a member of Lloyd's, where his fine business talents insured him great success. His risks were large, but Fortune seemed ever upon his side, and his benevolence kept pace with his good fortune. He built and endowed almshouses, provided at a cost of £40,000 schools for the free education and support of the poor children of his native place, gave large benefactions to other worthy objects, and in his will donated immense sums to hospitals, asylums, and other charitable purposes.

June 25.—FERGUSON, ROBERT, M. D., Physician Extraordinary to the Queen, and an eminent medical writer, died at Winkfield, near Windsor, England, aged 65 years. He studied at Heidelberg and Edinburgh, and after graduating from the latter University in 1823, settled in London, where he soon established himself in a lucrative profession, devoting most of his attention to the diseases of women and children. He attended the Queen in every confinement, and his consultation practice extended to nearly all the highest families in the kingdom. He was a bold and original practitioner, but at the same time a most laborious student, and a very voluminous writer. His chief published works are his "Essay on Puerperal Fever," and his edition of "Gooch's Works." The greater part of his writings were contributed anonymously to the "Quarterly Review."

June 28.—TAYLOR, ISAAC, an eminent English author, and inventor of a machine for printing patterns upon calico, died at Stanford Rivers, aged 77 years. He was a native of Lavenham, in Suffolk, was trained as an artist, but early in life adopted literature as his profession. His family were remarkable for their literary talent; his mother, brother, and sisters having all written works which have attained a wide popularity. In 1818 he became a contributor to the "Eclectic Review," but his first independent literary venture was a small volume entitled "Elements of Thought," published in 1822. This was succeeded by a translation of the "Characters of Theophrastus," with original illustrations, etched by the author; by the History of the "Transmission of Ancient Books to Modern Times;" the "Process of Historical Proof;" the "Memoirs and Correspondence of Jane Taylor;" and by a new translation of "Herodotus." In 1829 the "Natural History of Enthusiasm" was published anonymously, and rapidly ran through eight or nine editions. This was followed by "Fanaticism," "Spiritual Despotism," "Saturday Evening," and "The Physical Theory of Another Life." In 1838 he published "Home Education," and, in connection with the Rev. Robert Traill, took part in bringing out a new translation of "Josephus." The latter work was accompanied with numerous illustrations, engraved by some most ingenious and elaborate machinery, the invention

of which had been the amusement of Mr. Taylor's leisure hours. The engraving machine was patented in England, Ireland, and America. After an interval of seven years, he published essays on the lives of Loyola and of Wesley; a volume entitled "Restoration of Belief;" two volumes of essays, "Logic and Theology;" and "Ultimate Civilization;" "The Spirit of the Hebrew Poetry;" and a series of autobiographical papers published last year in "Good Words." One of the most complicated and beautiful pieces of mechanism now at work in Manchester, is Mr. Taylor's machine for engraving patterns upon rollers for calico printing.

June —.—MALMSTRÖM, Prof. ELIS, a Swedish poet, died at Stockholm, aged 49 years. As a student he was awarded the great prize by the Swedish Academy, for a collection of elegies, which he published in 1840, under the title of "Angelica." His poems are alike distinguished by their correctness and purity of form, as by their depth of thought. Besides Prof. Malmström's miscellaneous poems, which have gone through three editions, he has published an epic poem, "Ariadne," which is, perhaps, the most popular of his works, and several valuable historical essays and reviews.

July 28.—PRITCHARD, EDWARD WILLIAM, M. D., a medical writer, executed for the murder of his wife and mother, aged 40 years. He was a native of Southsea, Hants; educated in London and Paris, and after serving as an assistant surgeon in the Royal Navy, retired to private practice in Glasgow. He was a fellow and member of many learned societies in the United Kingdom, and a man of great literary ability. Among his writings may be mentioned—"Longevity," "Normal Sleep," "Chorea," "Visit to Pict Cairn's Island," "Antiquities of Fife," "Tobacco: its Use and Abuse," "Cure of Cancer," "Lecture on Egypt and its Climate," "Champagne in Diphtheria," "Tincture of Geraco in Gout," and "Sea-tangle Tents; or, Laminaria Digitata," and other papers.

July 30.—LABORDE, ETIENNE, Military Governor of the Palace of Luxembourg, died in Paris, aged 84 years. He entered the service in 1804, went through the German and Russian campaigns, accompanied Napoléon to Elba in 1814, returned with him to France, and was present at the battle of Waterloo. After the Revolution of 1830 he made the campaign of Belgium. In 1834 he was named Commandant de Place at Cambria, and in 1838 was placed on the retired list. Being warmly attached to the Bonapartist cause, he participated in the conspiracy of 1840 at Boulogne, was arrested and tried by the Chamber of Peers, and served an imprisonment of two years. In 1849 he was elected to the Legislative Assembly, when he voted with the majority, who were opposed to republican institutions. In 1851 he retired to private life, and some few years after was appointed to the post which he held till his death. He was the author of a volume entitled *Napoléon et sa Garde*.

August 4.—**AYTOUN, WILLIAM EDMONSTONE**, a Scottish poet and novelist, died near Elgin, Scotland, aged 52 years. He was a native of Edinburgh; was educated at the University of which he afterwards became Professor, and in 1831 gained a prize for the first poem, "Judith." He was called to the Scottish bar in 1840; and in 1845 was appointed by the crown to the chair of Rhetoric and Belles Lettres in Edinburgh University.

He was a contributor for thirty years to "Blackwood" and other magazines under the *nom de plume*, partly, of Augustus Dunshunner. His ballads, published in connection with Theodore Martin's as the "Bon Gaultier" ballads, gave him a wide fame, aside from his magazine reputation. He published "The Lays of the Scottish Cavaliers," first printed in a collected form in 1858, and now in their seventeenth edition; "Firmilian: a Spasmodic Tragedy," 1854, an amusing and effective burlesque of the sensational drama; "Bothwell: a Poem," giving an episode in the history of Mary, Queen of Scots, published in 1856; an edition of "The Ballads of Scotland," 1857; lectures on "Poetry and Dramatic Literature," delivered in London in 1853; translations of "Poems and Ballads of Goethe," a joint labor with Mr. Theodore Martin; "Norman Sinclair," a novel, first published from "Blackwood's" pages in 1861. He was also the author of some amusing papers, of which the dry and sly humor, perhaps, was best appreciated by his own countrymen, entitled "The Glenmutchkin Railway," a burlesque of the railway mania; "How I stood for the Dreepdail Burghs," a farcical sketch of electioneering, etc. Professor Aytoun was a D. C. L. of Oxford, and held other academical honors.

Aug. —.—**HAMILTON, SIR WILLIAM ROWAN**, Professor of Astronomy in the University of Dublin, and Astronomer Royal of England, born in Dublin, August 4, 1805; died at Dunsink Observatory near Dublin, September 2, 1865. At a very early age he gave strong indications of extraordinary intellectual powers. When but four years of age he had made some progress in Hebrew, and at thirteen years was in different degrees acquainted with thirteen languages, among which were some of the Oriental languages. Having access to a Latin copy of Euclid when ten years old, he became deeply interested in geometry. In 1823 he entered the University of Dublin, where he was equally distinguished for natural abilities and for acquired knowledge of the most varied kind, and his proficiency in classics and science gained for him every honor that the University had to bestow. While still an undergraduate, he was appointed Professor of Astronomy in the University, and Astronomer Royal of Ireland. In 1834 he received the Royal medal of the Royal Society for his discovery of conical refraction, and the succeeding year his paper on mathematical and astronomical science gained him the applause of the first authorities of Europe. As a lecturer, in his chair, he has been

eminently distinguished. His investigations on scientific subjects are published in the "Transactions" and "Proceedings" of the Royal Irish Academy and Royal Society, in the "Proceedings" of the British Association, in the "London and Edinburgh Philosophical Magazine," etc., and they are universally acknowledged to be some of the grandest specimens of the higher analysis. The last and most elaborate of Hamilton's writings is his "Method or Calculus of Quaternions," which occupied twenty-two years in its elaboration. The three leading traits of the author's mind, originality, generalization, and independence, are conspicuous in this work. Sir William Rowan Hamilton twice gained vice-chancellor's prizes for English poetry. He ranked metaphysics above mathematics in the hierarchy of science, and maintained that its highest province and the region of poetry lay in the same latitude. His manuscripts, in sixty volumes, are deposited in the library of Trinity College.

Aug. 10.—**CUMING, HUGH, F. L. S.**, an English botanist and conchologist, died in London, aged 74 years. Apprenticed to a sail-maker, he was brought into contact with sea-faring men, and in 1819 made a voyage to South America and settled in Valparaiso. Here his passion for shells, which had existed from childhood, found an ample field for development, and in 1826 he gave himself up wholly to his favorite pursuit. With this object he built a yacht expressly fitted for his collections, and cruised among the islands of the South Pacific, along the western coast of America, and subsequently among the Philippine Islands, where he was greatly aided in his researches by the Spanish Government. After several years of absence, he returned to England with the richest booty that had ever been collected by a single man. His dried plants numbered 180,000 specimens, and his collections of shells numbered at the time of his death over 60,000, being by far the finest in Europe. Large numbers of birds, reptiles, quadrupeds, and insects, were also added to the museums at home and abroad.

Aug. 20.—**TRELAWNEY, KATE HOWARD**, former mistress of Louis Napoleon, died at her chateau, near Versailles, aged 42 years. In early life she was remarkable for her beauty, and this, with her charms of manner, gave her great power over Louis Napoleon, from whom she received every mark of favor and consideration. On his marriage with the Empress Eugénie, the chateau and domains of Beauregard were settled upon his former mistress. She was then married to a captain by the name of Trelawney, and during the latter years of her life had grown exceedingly corpulent, so that her carriages were made expressly to accommodate her great size. The decline of her life was a period of great unhappiness, but she endeavored to assuage her own sorrows by extended and carefully administered charity, going in person to visit the sick, the suffering, and the poor.

Aug. 24.—**RICKARDS, REV. SAMUEL**, an Eng-

lish. Episcopal clergyman and author, died at Stowlangtoft, aged 70 years. He graduated at Oriel College, Oxford, in 1817, was ordained in 1820, and in 1832 was presented to the rectory of Stowlangtoft, where he passed the remainder of his life. He was a learned theologian and a vigorous writer. Among his works are "The Christian Householder; or, Book of Family Prayers," "A Parish Prayer-Book," "Short Sermons," and "Prayers, Morning and Evening of the Week for School."

Aug. 25.—COXE, Ven. Archdeacon RICHARD CHARLES, Canon of Durham and Vicar of Eglington, died at the vicarage, aged 65 years. He graduated at Worcester College, Oxford, in 1821, was ordained deacon in 1823, and priest in 1824. In 1841 he was presented to the vicarage of Newcastle-upon-Tyne, and in 1843 was appointed Honorary Canon of Durham, and was one of the select preachers before the University of Oxford. In 1853 he was preferred to the archdeaconry of Lindisfarne, with the vicarage of Eglington annexed. In 1857 he was made Canon of Durham. Archdeacon Coxe was the author of several valuable theological works, a number of sermons, and a few volumes of poems of a high order of merit.

Aug. 28.—WINDELE, JOHN, a distinguished antiquarian, geographer, and local historian, died at Cork, Ireland, aged 64 years. He was a native of Cork, and early in life evinced an intense love for antiquarian pursuits. Though a self-taught man, his information upon general subjects was varied and extensive, and he was well versed in the philology and antiquities of the ancient people of Europe, was a good Latin and French scholar, and an indefatigable contributor to periodicals, newspapers, and antiquarian publications. In 1839 he published his "Cork and the South of Ireland." He was a contributor to the "Dublin Penny Journal," the "Ulster Journal of Archaeology," and the "Transactions of the Kilkenny Archaeology Society."

Aug. 31.—APPOLD, J. GEORGE, F. R. S., an eminent mechanic and inventor, died at Clifton, aged 65 years. He held a high place among engineers and men of science. His centrifugal pumps formed striking features of the English Exhibitions of 1851 and 1862. The paying-out apparatus used in laying submarine telegraphs was mostly his invention; but the most remarkable proofs of his genius were collected in his own house and its surroundings, where almost every thing was automatic. Doors and gates opened and closed as required; when the gas was lighted, the shutters closed; and a self-acting thermometer prevented the temperature rising or falling beyond certain points. Mr. A. was also a dresser of furs by a secret process, which secured him a practical monopoly of the trade.

Sept. 2.—ENCKE, JOHANN FRANZ, a German astronomer, and director of the Royal Observatory of Berlin, born at Hamburg, September 23, 1791, died at Berlin, September 2, 1865. He

was educated at home by his father, and at the University of Gottingen, served in the Prussian army, and after the fall of Napoleon obtained a situation in the observatory of Seeberg, near Gotha, as assistant to Herr von Linden, the Director. He pronounced, in 1819, that the comet observed by Pons, at Marseilles, on the 26th of November, 1818, was the same as that previously seen by Mechain and Meissier in 1786 in the constellation Aquarius, by Miss Herschel in 1795 in the constellation Cygnus, by Pons in 1805, and that it would reappear in 1822, its period being about 8.3 years, but probably would not be seen in Europe. It was observed by Runcker, at Sir Thomas Brisbane's observatory, in New South Wales, on the 3d of June, 1822, and Encke's comet, as it has since been called, has kept its appointments with such punctuality that it might almost be regarded as a permanent member of our system, were it not for the gradual diminution in the time of its revolution, and its consequent approach to the sun. In 1825 Encke went to Berlin to take charge of the observatory there, as a successor to the celebrated Bode, whom he succeeded, in 1830, as editor of the "Berliner Astronomischen Jahrbuch." The erection of a new observatory in 1835, furnished with more powerful instruments, which was partly due to a suggestion of Humboldt, gave Encke an enlarged sphere of labor. Besides other investigations, Encke improved the theory of Vesta, and published a new method of computing perturbations, especially for orbits considerably elliptical. The planet Neptune was discovered at his observatory by M. Galle, his assistant. His publications upon astronomy and higher mathematics were numerous. In 1845 he published dissertations *De Formulis Dioptriciis*; and in 1846 a treatise "On the Relation of Astronomy to the other Sciences."

Sept. 4.—MOORE, MRS. BESSIE, widow of Thomas Moore, the poet, died at Sloperon Cottage, aged about 68 years. She was a woman of rare worth and loveliness of character.

Sept. 17.—GRANT, JAMES WM., astronomer and naturalist, died at Wester-Elchies, aged 77 years. He went to India in 1807, and remained there forty-four years, where he attained to a judgeship. During his residence here he spent his leisure in the study of astronomy, and upon succeeding to the family estates in Scotland, gave himself up to scientific and artistic pursuits. To further his astronomical studies, he purchased the great "trophy telescope," to which a prize was awarded at the Great International Exhibition of 1851. For this valuable instrument he had built the finest observatory in Scotland, and which has been visited by the most eminent scientific men of the world.

Sept. 22.—PANDEE, DR. CHRISTIAN H., an eminent Russian naturalist and geological writer, died at St. Petersburg. He was a native of Riga, and commenced his scientific career in 1817. Among his most important publications are "Contributions to the Geology of the Rus-

sian Empire," and "The Ichthyolites of the Devonian Rocks of Russia." He had also another work in preparation, upon the fossils of the same empire, at the time of his death.

Sept. —. —**AHN, Dr. FRANZ**, an eminent linguistic author and teacher, died in Rhenish Prussia, where he had long been head teacher of the gymnasium. He was the inventor of a new system of teaching foreign living languages, and many of his works have been translated and used in this country.

Sept. —. —**MEZZA, DE, General**, Danish Commander-in-chief in the late war with Austria and Prussia, died at Copenhagen, aged 72 years. He entered the army in 1807 and served in the defence of Copenhagen. On the restoration of peace his mathematical knowledge procured him a post in the school of artillery, which he held for upwards of thirty years. In the war of 1848 he again took the field and distinguished himself by his daring enterprise. At the conclusion of the war he was named Inspector Royal of Artillery, and in 1853 received the command of the forces in Schleswig, Jutland, and Funen. On the breaking out of the recent war he was charged with the defence of the Danneværke, but his means being inadequate, after a stout resistance he withdrew his troops; and although by so doing he doubtless saved the whole Danish army from capture, he was relieved of his command, and passed the remainder of his life in retirement.

Sept. —. —**MIGLIAZINI, Prof. MICHEL ANGELO**, Keeper of Ancient Monuments in the Royal Galleries at Florence, Italy, died there, aged 86 years. His labors in archæology have made his name familiar to antiquarians throughout Europe.

Sept. 30. —**HEIM, M.**, the celebrated painter of the "Massacre of the Jews," died in Paris, aged 78 years.

Oct. 11. —**HODGSON, CHRISTOPHER PEMBERTON**, author of several Oriental works, and late English consul to Hakodadi, Japan, died at Pau, Pyrenees, aged 44 years. Among his published works are "Reminiscences of Australia" (1846); "El Ydaïour; a Book of Eastern Travel" (1849); "History of the Viscounts of Bearn" (1855); an "Residence at Nagasaki and Hakodadi in 1859-'60."

Oct. 16. —**BURDER, WILLIAM CORBETT**, a well-known meteorologist and astronomer, died at Clifton, aged 43 years. He was the discoverer of the comet of March 1854, and also of the large comet of June, 1861.

Oct. 16. —**DRUMMOND, Rev. WILLIAM HAMILTON, D. D.**, a scholar, poet, and divine, died at Dublin, aged 87 years. He was the author of poems on the "Battle of Trafalgar," the "Giants' Causeway," etc., and prepared also a "Translation of Lucretius."

Oct. 24. —**BOSSANGE, MARTIN**, the oldest bookseller and publisher in Europe, died in Paris, France, aged 100 years. He was the founder of the firm of M. Bossange, afterwards Hector Boessange, Paris, and now Gustave Bossange

& Co., having branch houses in London, Odessa, Naples, Montreal, New Orleans, Rio de Janeiro, New York, and other places.

Oct. 24. —**NEWMHAM, WILLIAM**, an eminent English physician and medical author, died at Tunbridge Wells, aged 75 years. He was a native of Farnham, a skilful medical practitioner and author of several important works, among which are "A Tribute to Sympathy" (1817), which passed through eleven or twelve editions; "The Principles of Physical, Intellectual, Moral, and Religious Education" (1828); "The Reciprocal Influence of Mind and Body Considered," and an "Essay on the Disorders Incident to Literary Men."

Oct. —. —**MALGAIGNE, Dr. JOSEPH FRANÇOIS**, an eminent French surgeon, anatomist, and medical author, died in Paris, aged 60 years. He was a native of Charnes-sur-Moselle, graduated at the medical school in 1831, and although enjoying an extensive practice, was the author of a large number of valuable works, among which are his "Manual of Operative Medicine" (1834), translated into several languages; "Treatise of Surgical Anatomy and Experimental Surgery" (1838); and an annotated edition of the complete works of Ambrose Paré.

Nov. 3. —**FONBLANQUE, JOHN SAMUEL MARTIN**, Commissioner of Bankruptcy, and a distinguished jurist and legal writer, died at Brighton, England, aged 78 years. While pursuing his studies at Caius College, Cambridge, he burst a blood-vessel on the lungs, and a change of climate being advised by his physicians, he obtained a commission in the army. He served at Cadiz, Gibraltar, in Sicily, and the Greek Islands, and in Italy, where he received the appointment of Deputy Judge Advocate General. Thence he came to America and served in the war of 1812, during which he was taken prisoner by our forces. In 1816 he was called to the bar at Lincoln's Inn, and soon after was appointed one of the Commissioners of Bankruptcy. In 1826 Fonblanque, in connection with others, started "The Jurist," a quarterly journal of jurisprudence and legislation. "His Treatise on Medical Jurisprudence" was published in 1823.

Nov. 15. —**CHAPMAN, MATTHEW JAMES, M. D.**, a classical scholar and poet, died in London, aged 69 years. He took the degree of M. D. at Edinburgh in 1820, and graduated at Trinity College, Cambridge, in 1832. He was the author of "Barbadoes and Other Poems" (1833), "Jephtha's Daughter" (1834), and a translation of "Theocritus, Bion, and Moschus" (1836).

Dec. 1. —**QUERARD, JOSEPH MARIE**, the most industrious and laborious bibliographer of the present or perhaps any other age, died at Paris, France, aged 68 years. He was born at Rennes, in Brittany, and had devoted more than half a century to the exclusive study of French literature, and the production of bibliographical works, but his labors had never produced a lucrative return, and he was indebted to the

patronage of a Russian nobleman for the means of bringing out several of his works. His most remarkable productions were, *La France Littéraire*, a record of French literature, chiefly during the eighteenth and nineteenth centuries, of unexampled accuracy and fulness of detail, in ten volumes octavo; and *Les Supercheries Littéraires Dévoilées*, in five volumes octavo, an account of the apocryphal, disguised, and fictitious names and books in French literature, and of the authors who have gained credit under false pretences. He was engaged in bringing out a new edition of this at the time of his death. His life was a stormy one, for his books had made him many enemies, and the Government had failed to recognize, by his appointment to any official position in one of the public libraries, the great services he had rendered to French literature.

Dec. 16.—BIXIO, ALEXANDER, a French publisher, editor, and statesman, the founder of the best agricultural periodical ("The Journal of Agriculture"), the most extensive publisher of agricultural works in France, one of the leading minds of the Credit Mobilier, and an ardent advocate of education, died in Paris, aged 56 years.

Dec. —. FORCHHAMMER, JOHANN GEORG, an eminent Danish geologist and chemist, Secretary of the Copenhagen Academy of Science, and Professor of Geology and Mineralogy in the University of Copenhagen, died in that city. He was born in Husum, Schleswig, July 26, 1794, became secretary of the Danish geologist Oersted in 1818, and accompanied him in a mineralogical expedition to the Island of Bornholm in 1818-19. He subsequently made several journeys to Great Britain, France, and in Denmark, for the purpose of geological investigation, his expenses being defrayed by the Danish Government. In 1825 he was elected a member of the Academy of Sciences of Copenhagen, and in 1835 appointed Professor of Mineralogy and Geology in the University of Copenhagen. In 1851, on the death of Oersted, he was elected Secretary of the Academy. He has published a manual of Universal Chemistry (*Laerebog i Staffernes almindelige Chemie* 1834-'35); *Danemarks geognostiske Forhold*, 1835; *Skandinaviens geognostiske Natur*, 1843 (two works on Danish and Scandinavian geology), and numerous papers on geological and chemical topics, all in Danish. He had been for many years a careful and constant observer of the physical effects of ice in producing geological changes; and an elaborate paper of his, giving the results of his observations, was published in 1864, and translated into English.

OBSERVATORIES AND INSTRUMENTS, ASTRONOMICAL AND METEOROLOGICAL. Without an attempt to include here all that is of real importance even in relation to the establishment and working of observatories, during the two years or more ending with 1865, and to the improvement of the instruments and methods employed in connection with them, it is still hoped that enough is presented to afford

the general scientific reader a satisfactory idea of what is in our time being done in the way of astronomical and meteorological observation, and of the character of the results thereby attained. Many points that might here receive mention will be included under other heads; and the reader may in particular consult the article ASTRONOMICAL PHENOMENA, etc., and others referred to under it, and also those of BAROMETER and METEOROLOGY.

United States.—To the number of observatories in the United States, one has recently been added at Chicago, having been established through the liberality of citizens of that place, and being connected with its University. The large equatorial telescope ordered for this observatory, of Mr. Alvan Clark, is to be 23 feet in length, and of 18½ inches aperture. The entire cost, including transportation and mounting, has lately been stated at \$18,187. The tower is to be octagonal in shape, 35 feet in diameter, and 100 feet in height to the hemispherical top. Another tower is to be erected for the meridian circle.

The annual report for the Observatory of Harvard College, 1864, made before the decease of the late Director, Prof. G. P. Bond, shows that the labors of the year have been chiefly devoted to a continuation of the zone observations, the examination of nebulae, observations on the asteroids, on variable stars, and on certain telescopic comets of the year. Among the observations, those on Orion are spoken of as being of great interest, while six variable stars were discovered in the neighborhood of the trapezium. In the zone observations, Mr. Safford obtained by the great equatorial the positions of 4,700 stars, besides performing the reductions and computations involved in the work.

The report for the Dudley Observatory, Albany, for the year 1863, made by the astronomer in charge, Prof. G. W. Hough, and issued the following year, contains an account of the condition of the principal instruments employed in it, with discussions of methods of adjustment, etc.

The system of meteorological observation in the United States has its centre in the Smithsonian Institution, at Washington. From an early period in the history of its labors, this Institution has, in fact, devoted special attention to the investigation of all questions relating to meteorology. One of its first steps was that of organizing a system of observers which should extend as widely as possible over the whole North American continent—these contributing their services without compensation. Under its direction, a set of carefully prepared and accurately graduated instruments, now generally known as the Smithsonian standards, were manufactured. A series of instructions for the use of the instruments and for the observation of meteorological phenomena, and also series of blank forms as registers, having been prepared and distributed, the system was soon brought into practical operation.

From 1856 to 1861, an appropriation was made to the Institution for the collecting and reducing of statistics relative to the climate of the United States; but thereafter this was discontinued. The working also of a new postage law, adopted it would appear in the session of 1862-'63, interfered to a considerable extent with the sending in of the agricultural and meteorological reports, by requiring prepayment on them; though, at least during the years 1863 and 1864, this difficulty was in part overcome through use of the frank of the Commissioner of Agriculture. Under the new organization, in 1862, of the Department last named, a renewed interest has been manifested by the Commissioner in the continuation and extension of the system of meteorological observations and records, which had been established at so much labor and expense.

In the published "Reports" of the Institution for 1863 and 1864, from which this notice is drawn, the Secretary, Prof. Joseph Henry, calls attention to the extremely favorable conditions under which, in this country, the work of meteorological observations is prosecuted. Among these favorable conditions are, the great extent of the continent itself, and the fact that over so large a part of it the observers nearly all speak the same language; that of the latter a large proportion are furnished with full sets of compared standard instruments; and the facts that, while the storms of our country generally move from west to east, the position of the central Institution itself, near the eastern limits of the continent, enables it to receive information very constantly of great approaching storms, while these may yet be hundreds of miles to westward; whereas, in Europe, the chief centres of meteorological observation thus far are near the western coast, and telegraphic notice of storms is not to be received from the ocean.

A "List of Meteorological Stations and Observers of the Smithsonian Institution" is given in the Report for 1863, and also in that for 1864. Of the stations enumerated in the latter year, 282 are within the United States and Territories, and 16 others at certain points in British America, Mexico, the West Indies, and Central and South America. Contributions of meteorological reports and papers of various character are also received from many private observers in this country, and from some private observers and institutions in Europe. Up to at least the close of 1863, the most important among such auxiliary sources of information would appear to have been the records furnished to the Institution for periods varying from $2\frac{1}{2}$ to 4 years, from ten lake stations, successively under the charge of Capt. (now Gen.) Geo. G. Meade, of Lieut.-Col. J. D. Graham, and of Col. Reynolds, Superintendents of the Survey of the Northern and Northwestern Lakes. From these stations, extending from Sackett's Harbor, at the foot of Lake Ontario, to Superior City, at the western extremity of

Lake Superior, records have been furnished which, being made three times daily, at the hours of the Smithsonian system—7 A. M., and 2 and 9 P. M.—and with full sets of instruments, are of great value.

An important object kept in view has been the collection of data for determining the development and progress of atmospheric disturbances of great extent, including the commotions which occur during autumn, winter, and spring, over the middle or temperate latitudes of North America. Thus, the extensive and simultaneous system of observations carried out under the lead of the Institution, has already furnished the means of establishing fully the law in regard to storms, etc., which had before been intimated by the investigations of Espy and others, viz.: that, within the temperate zone (at least of our continent), all such meteorological phenomena as variations in the pressure of the atmosphere, sudden changes of temperature, either of unusually warm or cold weather, thunder-storms, tornadoes, ordinary storms of wind, rain, etc., travel *from west to east*. As early as 1849, a system of telegraphic despatches was organized by which intelligence was received at Washington of the condition of the weather at distant places, Southwest and Northwest; and, guided by the law already mentioned, the larger disturbances of the atmosphere have since often been predicted, and in some instances a day or two in advance. At a period subsequent to the date above given, the telegraphic despatches were daily exhibited at the Institution, on a map of the United States, by means of a series of movable cards; thus showing in what parts of the country it might be clear or cloudy, raining or snowing, and also by arrows the directions of the wind. This enterprise was interrupted at the breaking out of the war, by the cessation of returns from the Southwest, and the constant use of the telegraph required by the Government. Another question in regard to extensive storms is, whether the movement of the air over the region covered by them is gyrotory (cyclonic), or whether it is a movement from all sides toward a central point or an irregular elongated middle space; and the hope is expressed that upon these inquiries some light may be shed by the data already obtained and published in systematic form by the Institution.

In addition to the daily weather map above noticed, isothermal charts were constructed from all the observations up to the year 1860; as well as a series of rain charts, and a large map exhibiting the regions of original forest, of arable prairie, and of desert, within the limits of the United States. The Commissioner of Agriculture later commenced—in 1863, it would appear—the publication of a monthly bulletin, giving the state of the crops, the condition of the weather, and various other items daily received from observers. For this bulletin the Institution supplies the meteorological materials, consisting of the maximum, minimum, and

mean temperature, and amount of rain, for each month, in different States, and also, for purposes of comparison, the mean temperature and amount of rain for a series of five years, grouped by States (see such table in this *CYCLOPÆDIA*, 1864), together with tables of important atmospheric changes, and notices of auro-ras, meteors, etc. This publication has been received with much favor both by agriculturists and by meteorological observers. Meanwhile, however, not only has the collection of the original *data* from the various observing stations, as before intimated, been interfered with since the beginning of the late war, but also the reduction and issuing in systematic form of much of the materials that have been received; though it is hoped that both these parts of the work of the Institution may soon be resumed, through a renewal of the appropriations for these objects which have been now for four years suspended.

The second volume of the results of meteorological observations made under the direction of the Institution and of the Patent Office, for the six years from 1854 to 1859, inclusive, having been for some time delayed in press, it was at length decided to issue the part already printed; and this, forming a quarto volume of more than 600 pages, was bound and distributed in 1864. The volume is in two parts—the first half, generalizing the observations of periodical phenomena (1851-'59) in certain species of plants and animals, with tables of the opening and closing of lakes, rivers, canals, and harbors, having been prepared by Dr. F. B. Hough, of Albany; and the second half, occupied with materials respecting three storms in 1859, by Prof. J. H. Coffin, of Lafayette College, Pa. This volume, and that previously published on meteorological phenomena generally of the same period, together make nearly 2,000 pages; and these, along with nearly 200 pages quarto of reductions for the years 1855-'59, inclusive, published as an appendix to the "Statistical Report of the Sickness and Mortality in the Army of the United States," constitute a valuable body of materials for the investigation of meteorological problems. Among other meteorological publications of the Institution, may be named—the work of Prof. Coffin on the Winds of the Northern Hemisphere; that of Prof. Loomis on a great storm which pervaded both America and Europe; Prof. Caswell's reduced observations of 28 years at Providence, R. I., and Dr. Smith's of 20 years in Arkansas; besides Meech on the Heat and Light of the Sun, Olmstead and Force on Auroras, etc.

The Secretary, after alluding to the receipt of meteorological bulletins from Paris and from Palermo, and to a plan of observations proposed in the latter similar to that adopted previous to the war by the Smithsonian Institution—namely, that of furnishing the most important telegraphic stations with meteorological instruments, and instructing the telegraph-

ists in the process of making observations, remarks that a thoroughly organized system of this kind, over the whole United States, with a series of directions for predicting the weather at a given place from a knowledge of the condition of the atmosphere at distant points, would be of vast importance to the maritime and agricultural interests of the country, particularly along the Atlantic seaboard. An important aid to this end is already secured in the action of the North American Telegraphic Association, which gives the free use of all its lines for the scientific objects of the Institution. The lines of the Association extend to all parts of the United States and Canada, including the overland line to San Francisco; and the companies on the Pacific coast have granted like privileges.

In the unfortunate fire by which, on the 24th of January, 1865, the Smithsonian Institution buildings and their contents were in part destroyed, the meteorological department sustained a severe loss. Still, though the fire spread rapidly through the three rooms in which the meteorological records were kept, the larger portion of the contents of these rooms was nevertheless saved. As parts of the loss occasioned by this fire to the Institution, should be named the contents of the Secretary's office, embracing considerable collections of papers, official, scientific, and miscellaneous; a large amount of apparatus, including the principal instruments employed for meteorological observations at the Institution, and among which was the self-registering apparatus of Dr. Smallwood, of Montreal, for recording the direction and velocity of the wind, as well as all the records obtained by its use since the year 1858; while among the losses to other parties were that of Mr. J. M. Stanley's portraits, some 200 in number, of Mr. King's Indian portraits, of a copy in Carrara marble by John Gott of the "Dying Gladiator," of two private libraries, etc. The fire is believed to have originated in the heated air or sparks from a stove in an upper room, which was temporarily brought into use, and the pipe of which had been by mistake inserted into a space resembling a flue in the wall, and from which the woodwork immediately beneath the slate roof became ignited. The amount of loss to the Institution, independent of damage to the building, and so far as it may be estimated in money, has been stated at \$20,000; that to individuals, at \$28,000. A list of the deficiencies caused by the fire is to be published.

Great Britain.—Professor G. B. Airy, in charge of the Royal Observatory, Greenwich, has decided to resign to private observers the inviting subject of the observation of the sun's surface. From his recent report, it appears that of late the first place has been given to observations of the principal fixed stars, and especially—in consequence of the recently discovered roving propensity of that luminary—to those of Sirius. Observa-

tions have also been made with a view to defining the position of the ecliptic and the sun's place in it, and upon the moon. No important changes, instrumental or otherwise, have here been lately (up to July, 1865) introduced. An arrangement, however, is in successful operation by which the Observatories of Greenwich and Paris are each charged with the meridional observations of the asteroids during half of each lunation—the former from new to full moon, the latter from full to new: in this way, without involving incompleteness in the work, relief is afforded to both these establishments.

At the 35th meeting of the British Association for the Advancement of Science, which opened September 6, 1865, Mr. J. P. Gassiot, chairman of the "Kew Committee," presented a full report, from which a few particulars will here be noted. Capt. Basevi and Col. Walker, of the Indian Trigonometrical Survey, had received instruction at the Kew Observatory, with a view to making the pendulum experiments in India which the Association had previously ordered. The two pendulums to be used, both previously employed by Sabine, and one by Airy, in important experiments, after having their constants determined anew, had arrived in safety at the office in India of the survey, in charge of Mr. J. Hennessey.

By the Kew Heliograph, under the supervision of Mr. Warren De la Rue, 248 negatives (photographic) of the sun had been taken on 146 days, and four sets of positives printed from these had been distributed among men of science. An addition has been made to the micrometer, by means of which the proportion of the sun's disc at any time obscured by spots, can be measured. Mr. Carrington has placed at the disposal of this Observatory his original plates, 166 in number, representing observations of sun-spots made during seven years at his Observatory at Redhill. In order that all observers who desire may be enabled to investigate the phenomena of solar spots, it has been thought proper to publish the results in such a way that any one may study their appearance and behavior; and to this end, a lens is being made by Dalmeyer, intended to magnify groups of spots to a scale on which the sun's diameter shall equal two feet. Kew having been the first public institution to take up the observation of sun-spots after the manner of M. Schwabe, of Dassau, has procured from that astronomer the full set of original drawings of the sun's surface, etc., made by him during about forty years.

A large number of instruments for meteorological purposes, including a self-recording barograph and thermograph, barometers, thermometers, etc., had been during the preceding year verified at this observatory, for use in other institutions of the sort and by private observers. At Kew, a self-recording barograph is in constant operation, and duplicates of the traces recorded in the instrument are obtained, one set of which has been forwarded to the

meteorological department of the Board of Trade. The photographic action of total daylight is daily registered by an apparatus constructed by Prof. Roscoe, and in accordance with his request. Of this Observatory Mr. Balfour Stewart is director, while the meteorological department is in charge of Mr. Thomas Baker.

An account, at considerable length, of the meteorological system in operation in Great Britain, including weather "forecasts" and storm-signals, and the establishing of which was so largely due to the labors of the late Admiral R. Fitzroy, will be found under METEOROLOGY, in the volume of this CYCLOPEDIA for 1862. It appears, however, that at the present time the meteorological systems in operation in France and Russia are much in advance of the English; and it has recently been urged that in the latter country the Board of Trade should adopt the continental plan of daily published bulletins, to which might also be added charts or notices of the progress of important agricultural labors, of blights, epidemics, etc. At Mr. De la Rue's observatory, at Cranford, during the year 1863, several fine lunar photographs were taken, some of the negatives being enlarged with success to the dimensions of Beer and Mädler's map, 88 inches. The silvered-glass mirror received from Dr. Steinheil, of Munich, was to be tried, its light being considerably greater than that of speculum-metal mirrors, and so much so as to give hope that the time of exposure could be shortened. The mirrors had so far preserved their original polish, the precaution having been taken to insert lime-boxes in the tube of the telescope, to prevent their becoming damp.

At the Ely Observatory, the Rev. W. Selwyn has had in operation since January 1, 1863, an instrument termed a heliograph, and consisting of a photographic camera attached to a Dollond refractor of two and three-quarters inches diameter. During the year sun-pictures were taken on 189 days. Two of these afford interesting records of the solar eclipse of May 17, 1863; the latter of them, taken near the middle of the eclipse, shows very distinctly the uneven edge of the moon on the solar disc, and the appearance (so often noticed, and now generally believed an optical effect) of a bright band surrounding the edge of the moon. Mr. Selwyn's pictures are of about four inches diameter, and, as recording the phenomena of the formation and changes of spots (a second picture having for this purpose been, on each of 55 days, taken after a short interval), and in particular for the good view they afford of the faculae, will prove a valuable supplement to the Kew photographs. A larger refractor, of six inches aperture, was being prepared for the work now indicated.

Mr. Cooke, of London, is engaged in the construction of a refracting telescope of very uncommon dimensions. The aperture of the object-glass is 25 inches; focal length 29 feet.

The equatorial mounting is on the German plan, and the tube is of steel. The figuring of the lenses is performed by machinery of Mr. Cooke's invention.

France.—In accordance with an arrangement some time since initiated by the Emperor, in connection with M. Leverrier, Director of the Imperial Observatory, Paris, daily meteorological reports are received by telegraph at the latter from (in 1864) at least sixty-five regular stations situated in different parts of Europe. From the materials so collected a daily bulletin is published, now entitled the "International Bulletin of the Imperial Observatory of Paris;" of this, which makes up yearly some 1,200 folio pages, the subscription price is 36 francs. These bulletins give summaries of the records of the barometer, thermometer, wind, face of the sky, etc., as each day received, being more recently accompanied daily also with a small lithographic chart of Europe, showing by diagrams the barometric curve at the various stations, together with the temperature, and the direction and force of the wind; while to the whole are added statements of the flight of meteors, etc., and the probable prognostics of meteorological changes for the next day, including (for the use especially of vessels about to leave port) the probable direction of the wind.

Of course, in proportion as it becomes possible to interpret more and more correctly the indications thus obtained from so many points upon the Continent the condition of the weather which is to occur during a period immediately following can be predicted beforehand with less and less uncertainty. In order, at the same time, to enlist the coöperation of nautical observers, the new Scientific Association (*see* ASTRONOMICAL PHENOMENA, etc.) has offered considerable prizes—five of 300 francs each, according to one account—for the several best series of observations made at sea. An especial purpose had in view in this is to obtain data for recording the progress of storms; and the captains of ships are solicited to keep during their Atlantic voyages a record of the barometer, which, in connection with minutes of the day and hour, of the ship's place as shown by the log-book, of the direction and force of the wind, and of the state of the sky and sea, would furnish the data required. Proceeding upon such of these as it had been able to procure, the Imperial Observatory was already prepared—spring of 1865—to publish, under the title of Storm-maps, a series of charts showing the movement of the tempests of the preceding year. The meteorological department of the Observatory is in charge of M. Marie-Davy, well known for his researches in connection with the science under consideration.

The daily bulletins already mentioned, and containing, of course, the weather "forecasts" for the following day, are, as soon as issued, despatched to the principal seaports of France, and also to the Observatory at Brussels, from

which latter they are sent to ports on the coast of Flanders. At the important ports the bulletins are posted in public places; and announcements are also furnished to the newspapers for publication. The benefits of the system have already been acknowledged in strong terms by chambers of commerce and by intelligent seamen; while the published statements are likely to prove of great service also to agriculture and the public health.

In respect to the work of astronomical observatories in France, little information has been met with. M. Foucault continues to construct telescopes of unusual excellence, and one of which, of large size, he has lately furnished to the Observatory at Marseilles. These telescopes are fitted with the regulating mechanism by which the instrument is made to keep pace exactly with the apparent movement of a star or group under observation—a result of course desirable where continued examination is sought, but still more so in the work of obtaining star-photographs, as securing time for the due impression of the sensitive paper or surface used.

Russia.—The system of meteorological observations which has of late been in course of extension and perfecting upon a grand scale in Russia, was, until his death in the early part of the year 1865, under the control of Dr. Kupffer, Director of the Central Physical Observatory at St. Petersburg, who had already established a great number of meteorological observatories throughout the vast extent of the empire, from Western Europe to the confines of Eastern Asia. At Revel, Helsingfors, Nikolaiev, Astrakhan, Archangel, and perhaps other points, are central stations, each having a number of posts subsidiary to it. From the latter, daily telegraphic reports are forwarded to the central stations; while from each of these a report is despatched to St. Petersburg, where, as in Paris, a daily summary is published, accompanied with a meteorological map.

In the "Quarterly Journal of Science" appear abstracts of an account by Mr. W. De la Rue of his visit to the Pulkowa Observatory, situated ten miles southwest from St. Petersburg, and of his descriptions of some of the improved instruments and arrangements employed in it. Since the death of F. G. W. Struve, his son, M. Otto Struve, holds the position of director. Great pains have, during the past few years, been taken here to secure accuracy of the instruments, and in particular to get by them the *absolute* places of the celestial bodies. The automatic recording of transit-observations is in use, but on a plan somewhat differing from that at Greenwich. Meidinger's modification of Daniell's battery is employed, the tappet apparatus not being attached to the transit, but held in the hand. The observer, seeing a star enter the field, makes on the registration paper as unrolled, his record in Morse's alphabetic signals, and also any additional remarks he may deem necessary.

Very great improvements have been made in

the arrangement of the normal clock. To correct that which, in the present perfection of workmanship, is the principal one of three sources of error—namely, that the mercury, owing to the greater ratio of its mass to its amount of surface than holds true in case of the rods, is slower than the latter in responding to changes of temperature, thus preventing exact compensation and the uniformity desired in the effective length of the pendulum—the clock is now placed in a subterranean chamber beneath the hall, where changes of temperature occur very slowly, and their limits from one period of the year to another are very narrow. It is intended, further, to remove a second cause of error—the barometric, or that due to unequal resistances of the air at different densities to the movement of the pendulum—by enclosing the clock within an air-tight case, and, by means of a pressure-gauge and an air-pump communicating with the enclosed space, maintaining about the clock an atmosphere of uniform density. Dr. Winnecke, of the same observatory, is directing his attention to the determination of the parallax of fixed stars, recording his results by the automatic method.

Other European Countries.—In respect to these, little information has been obtained. In Italy, astronomical observations are still carried on with the zeal and the success also for which, in this respect, that country has so long been honorably distinguished; and, in particular, it may be remarked that Father Secchi, at Rome, and M. Donati, at Florence, are actively prosecuting the work of celestial exploration and discovery. A meteorological bulletin, similar to those of Paris and St. Petersburg, is now issued from the Royal Observatory at Palermo. A Central Meteorological Bureau was, May 1, 1865, instituted in Russia. As in France and Russia, reports of meteorological phenomena from various stations will be regularly received by the bureau, and bulletins issued by it, containing especially whatever relates to the progress of storms, will be placarded in the principal seaports.

Time-Signals.—Three principal methods of transmitting to distant points, and there repeating or signalling, the correct time of a standard or normal clock, have been resorted to. These are, 1, that of the *electric-fixed time-gun*; 2, that of the *electric-dropped time-ball*; and 3, that of *electric-controlled clocks*. All three of these methods have been adopted in the transmission of correct time from the clock of the Royal Observatory, Edinburgh; though the controlled clock and the time-gun have been most in demand. In the former case, here and in other parts of Great Britain, the arrangement known as Jones' patent has been employed; and on this plan several clocks in different parts of Edinburgh have been made to keep [sensibly] exact time with that of the Observatory. The time-gun, 4,000 feet from the Observatory, required a permanent use of the transmitting wires, so that the mode was

scarcely applicable to great distances. Mr. N. J. Holmes then arranged a time-gun at Newcastle, 120 miles distant, to be fired by means of Wheatstone's magneto-exploder and Abel's magnetic fuse; and on a fair day the current sent off along the telegraph wire discharged the gun with no sensible hesitation or "hang fire;" but on a foggy day the highly intense magnetic current was in too great a degree dissipated and lost. A practical system was finally devised, by causing a large signal-sending clock to discharge along the line of telegraph wire, at the due moment, a galvanic current of low intensity; this, on reaching Newcastle, was made to liberate in the proper apparatus there the more intense magnetic current, which had then only a few hundred yards to travel to the gun. Several time-guns at different places have since been put in operation, the Government favoring these enterprises by lending 24-pounders for use in them. At some points the plan, once tried, had been abandoned; but there were still (in the beginning of 1864) fresh applications from others for the benefits of the system.

An important extension of time-arrangements from the Greenwich Observatory and from other points has been—up to at least the spring of 1865—going forward in England. Mr. De la Rue has made an electric communication of his establishment with Greenwich—the clock of the former being caused for months consecutively to beat second by second with the Observatory clock at the latter; while, to correct an occasional variation, should such occur, a special signal is also sent at four seconds after every hour. Mr. C. F. Varley has mounted apparatus for distributing time-signals over various lines of railway reaching almost to the extremities of Britain, and for firing signal guns at Newcastle and Shields. The currents sent hourly to the office of the London District Telegraph are made available to chronometer-makers of the city. Prof. Airy expresses the hope that movements will soon be set on foot in London for the more perfect regulation of public clocks generally, and for other exhibitions of time-signals. Liverpool is to have a time-gun controlled from her Observatory; and at Glasgow, ten public clocks—at distances averaging three miles—are in operation, controlled from the Observatory there.

Mr. De la Rue describes an ingenious method of communicating the time-signals or impulses from the normal clock at Pulkowa for controlling the time of other clocks. On the frame of the clock, one on each side of an imaginary plane that would cut the centre of the crutch, are fixed two ivory cylinders, each having cemented within it a capillary tube of glass: through these tubes, from reservoirs of that liquid metal, flow streams of mercury, which meet and coalesce in one, thus constituting a *mercury wire* that, so long as it is continuous, serves to complete the circuit of a battery. In order to break the circuit at the desired inter-

vals, a thin blade of mica is so fixed to a prolongation of the ordinary crutch that at each oscillation of the pendulum it cuts the mercury wire, thus interrupting the electric current and transmitting the required signal. By varying the width of the plate of mica, the duration of the break can be regulated. A time-gun has also been set up recently on the Admiralty Quay at St. Petersburg, to be fired at midday by an electric current sent from the Pulkowa Observatory.

Machine for Cataloguing and Charting Stars.

—Prof. G. W. Hough, Director of the Dudley Observatory, Albany, describes in the *American Journal of Science*, vol. xxxviii. (date of September, 1864), a machine invented by himself, for the purposes indicated in the above title. He alludes in the outset to the first suggestion, in 1848, of the application of electricity to the recording of astronomical observations, the result being the early construction of *chronographs* by various persons. All these had for their object the recording of one ordinate only of a star's position at a given moment—that, namely, in right ascension (celestial longitude); except that the late Prof. O. M. Mitchell had also made some experiments in the way of electric recording of declinations (celestial latitude). Again, in determining difference of declination as well as time of transit, astronomers have almost invariably used the telescope in a fixed position, and depended upon a diaphragm or scale placed in the focus. Prof. Mitchell had, in 1849, devised a plan by which the angular motion of the telescope when moved in zenith distance, magnified by mechanical means, was made to show the difference of declination; and this principle also enters as one of the elements in Prof. Hough's apparatus.

The work heretofore of constructing star-charts, by laying down by hand the positions as given in a catalogue, has been extremely difficult and tedious. Mr. Hough became impressed with the desirableness of making the star-map in the very process of observing for correct positions. The accomplishment of this important purpose, at once securing great accuracy and saving labor and time, has been attained in the apparatus now to be described. In this, the record of the places of stars observed is made by the point of a hollow cylindrical steel pen: the place, at any moment of the pen over the sheet of paper receiving the record—the latter having been preparatorily coiled about a horizontal cylinder directly over which the pen rests—is determined continually by two movements; namely, *first*, by the steady revolution, once every hour, of the cylinder itself; and *secondly*, by a lateral movement given to the pen through mechanism connecting it with the clamp arm of the telescope, viz., a horizontal arm which carries the pen, a compound lever giving motion to the former, and a horizontal rod and upright bar by which the connection with the clamp

arm already mentioned is completed, while at the same time these parts serve further to magnify in the record the angular motion given to the telescope in zenith distance.

The cylinder carrying the record paper is ten inches in diameter and six inches long, and is made to revolve (as placed) from west to east, by means of clock mechanism and a half-seconds pendulum. Thus, the apparent regular movement of the pen along the paper, produced by the turning of the cylinder, corresponds to differences of right ascension, and of time; while the lateral movement—that in the direction of the axis of the cylinder—imparted to the pen, corresponds to differences of declination. The electrical recording mechanism is simple: it consists of an electro-magnet, its helix of course being part of the circuit of a galvanic battery, while the magnetic condition, when induced in the soft-iron magnet, is made by means of the armature to operate a horizontally placed arm, upon the end of which is a horizontal cross-piece standing parallel to the axis of the cylinder and running its whole length: the depression of this cross-piece by action of the magnet forces down the arm which carries the pen, over whatever part of the length of the cylinder the latter may stand. To make a record, it is only necessary to press a key by which the circuit through the coil of the electro-magnet is closed: the cross-piece is thus caused to strike a blow on the arm carrying the steel pen, so that at the instant a small dot is made on the record sheet covering the cylinder. For some further details in reference to the mechanism and means of modifying its action, the reader must be referred to the original account.

For stars of magnitude greater than the ninth, of which generally not more than three or four will have to be recorded in a night, the magnitudes are specially recorded by an assistant. The magnitudes 9, 10, 11, 12, and 13, are distinguished in the record by introducing for each beneath the point of the pen just before recording, and as may be required, the proper one of five strips of differently colored paper: each of these magnitudes is thus known by a particular color imparted to the dot which records the star's place. For the 14th magnitude—the smallest observed—the dots are left colorless, and are not specially marked. The strips of colored paper are so placed on an arm moving about a vertical axis, that the observer can, without removing his eye from the telescope, bring each as desired under the pen.

As fast, then, as the stars enter the field of the telescope, they are brought to the intersection of a horizontal and a vertical wire, when the electric circuit is closed and the record made; and thus constantly sweeping with the telescope a zone of 10' to 12' width (the greatest usually practicable), the result obtained during one revolution of the cylinder is a "fac-simile" copy—a chart—of the given zone of

stars, for one hour of right ascension: the number of stars taken within such limits is often as great as two hundred, and, in the region of the galaxy, sometimes amounts to four hundred and eighty. At the end of an hour, the pen, which has swept but a portion of the entire length of the cylinder, can be shifted over a new belt of the record sheet, and another hour's observations taken. Further, however, as each dot is made on the record sheet, a simultaneous record is also made on the working chronograph, and which gives the time to the one-hundredth part of a second; and for the exact declination, an assistant reads the declinometer scale to the five-tenths of a second. Thus are obtained at once a complete catalogue of the exact positions of the stars, and also a perfect map of the given part of the heavens. The apparatus can be adapted to any telescope. Of course, by showing the fact of change of position in any star, or the entrance of a new one within a given zone, upon taking sooner or later a second chart of it, this apparatus affords great facility both for the finding of known asteroids and the detecting of previously undiscovered ones. Again, if records have been obtained of several contiguous zones, these may be subsequently pricked through upon a single sheet, or otherwise transferred, thus producing star-maps of larger size.

An Aluminium Bronze Transit Axis.—In this CYCLOPÆDIA, 1862, will be found, under the head of CHEMISTRY, an abstract of a paper by Lieutenant-Colonel A. Strange, in relation to the qualities of various bronzes of aluminium and copper, and the probable value of some of these for the construction of instruments for scientific purposes.

April 12, 1865, Col. Strange presented before the Royal Astronomical Society a paper in the first part of which he detailed the results obtained in the way of castings of the bronze, and in particular its successful application to the construction of a transit axis. He now states that the alloy has been extensively employed, and that it has answered all his expectations, with a single exception; namely, that in consequence of its tarnishing more than was anticipated, and of the difficulty of producing a surface absolutely free from defects, the metal is not found so suitable as was hoped for receiving graduation. In the early experiments, also, there was a difficulty in securing large and complex castings, owing to the metal's running sluggishly into the mould and solidifying very quickly; but this had been overcome. In confirmation, the author exhibited an axis formed of the bronze, and made for a transit-instrument, of which the focal length was to be five feet. The length of the axis between bearings was $38\frac{1}{4}$ inches; the central cube nine inches by the side; the average thickness of the metal but 0.15 of an inch; and the total weight only 56 pounds. It was cast hollow, and in one piece, being made to include also an inge-

nious system of internal strengthening webs: the work was executed by the Messrs. Cooke, of York. From the effect of these webs, in conjunction with the rigidity of the alloy itself—the latter being three times as rigid as gun-metal—this was believed to be the stiffest transit axis hitherto made. In the second part of his paper, Col. Strange considered the adjustments of the instrument. He endorsed Mr. Cooke's suggestions, in respect to suspending one or more levels to the tube of the telescope itself, these watching the telescope instead of the pivots; and in respect also to the covering of the mercury surface, ordinarily relied on in collimating, with a disc of glass having accurately plane and parallel surfaces.

The Chronographic or Automatic Method, in Transit Observations.—The adoption of the automatic method for the recording of transit observations is steadily extending. It has been well remarked, that there is a degree of proficiency beyond which no amount of training can carry human skill; and that, when this has been reached, it is proper to give the resources of the intellect a new direction, in the devising of mechanical contrivances which shall accomplish the desired end with a precision not directly attainable by the human organs. M. Faye insists on the advantage of substituting largely the work of automatic mechanisms in lieu of that of the observer's hand, as a means of avoiding the errors of the senses, and also [of diminishing, at least] those "personal errors" which have no fixed value and which can scarcely be corrected.

In the Monthly Notices of the Royal Astronomical Society, for May, 1864, appears a paper "*On the Probable Error of a Meridional Transit-Observation, by the 'Eye and Ear' and Chronographic Methods,*" communicated by Mr. E. Dunkin. The author treats at length of the sets of observations chosen by him for examination, and of his modes of discussing them—particulars for which space cannot here be allowed. His results are, however, evidently drawn, as he states, from "a great mass of computation;" and the principal of them are the following:

1. In "*eye and ear*" observations, the probable error of a Greenwich transit observed in 1853 over *one wire* is ± 0.078 , while that of a *complete* transit over the seven wires is ± 0.029 . In *chronographic* observations, the probable error of a Greenwich transit observed in 1857 over *one wire* is ± 0.051 , and that of a *complete* transit over the nine wires is ± 0.017 .

3. In the eye-and-ear transits, only, for stars whose north polar distance is greater than 60° , it would seem that the probable error of a transit increases slightly as the north polar distance increases.

4. In eye-and-ear transits, the personal discordances are liable to a considerable variation between the different observers: in chronographic transits, the differences between the observers are comparatively small. The gen

eral steadiness of observing by the latter method is very remarkable, and shows the great advantages obtained by its adoption.

5. The probable error of a Greenwich result for right ascension in the year 1853, as determined from eye-and-ear transits, is ± 0.048 ; while the corresponding probable error resulting from chronographic transits in the year 1857, is ± 0.034 . There is a tendency in both methods toward an increase in the probable error when transits of stars of the first magnitude are observed; but the amount of this increase is small.

In the discussion following the reading of this paper, Mr. De la Rue remarked that there is a "personal equation" even in the chronographic system. The finger might move a little too soon or too late upon the tappet, or the tappet might "hang fire," etc. Mr. Wheatstone had proposed to correct this by a system of wires in the transit-instrument, which, when the star was brought between them, should be made to follow its movement, and when the star passed the optical axis of the instrument, or any number of known points from that axis, the chronographic contact should be secured by contact of the wires, and a number of records thus obtained independently of the will of the observer. Col. Strange thought this result had already been accomplished in an instrument in the Paris Observatory, by an invention of M. Redier. In this, the wire was carried so steadily across the field—so exactly with the same velocity as the passage of the stars—that the record of the intersection of that star with the wire was a matter of perfect ease and certainty. Such a system, he thought, would still further reduce the errors even of the chronographic method.

Col. Strange remarks also that M. Leverrier had in a conversation with him disapproved of the chronographic system, declaring that its practice tends to make bad astronomers. Subsequently, in a note to the Society, Leverrier has stated that in the conversation referred to he had been to some extent misunderstood, and that what he would say is, that "a touch-observer does not acquire the same appreciation of duration of time as an observer trained to eye-and-ear observations."

OHIO. The progress of this State in wealth and population, uninterrupted during the war, would seem, judging from the greatly increased receipts into the treasury, to have received a new impetus with the advent of peace. The total receipts from all sources during the fiscal year amounted to the sum of \$18,190,000, while the receipts during 1864 were only \$8,680,000, showing an increase of \$4,510,000. The total disbursements were \$12,400,000, or \$5,721,000 more than in the previous year, when they were only \$6,679,006, leaving a balance to the credit of all funds of \$790,000 against \$2,000,960, the balance of 1864. The total funded debt of the State was \$12,912,014, showing a diminution of \$588,736 since 1864,

when it was \$13,500,750. The following table, from the Auditor's report, showing the debt and population of the State at different periods and the proportion of the debt *per capita*, affords evidence of a remarkable development of material resources and accumulation of wealth:

	Debt.	Population.	Per Capita.
1844.....	\$13,004,526	1,702,714	\$10.57—403
1854.....	15,218,980	2,124,000	7.16—524
1860.....	14,250,233	2,389,511	6.09—111
1865.....	12,912,014	2,514,974	5.13—405

The Auditor says: "With a rigid adherence to economy, the proper amendments of the tax laws, and the steady and intelligent enforcement of a just and equal taxation, the public debt will disappear in seven years, and the State levy sink down to one mill on the dollar. Then, with the rate of interest properly adjusted, capital will flow into the State, manufactories spring up, and population and wealth augment in a ratio hitherto scarcely dreamed of." It appears, from the table of the public debt in the Auditor's report, that there remains due:

Of the loan of 1860.....	\$563,203 56
Of the loan of 1865.....	1,002,500 00
And that there will be due in 1868.....	639,079 13
Making.....	\$3,280,547 69

From the report of the Commissioner of Statistics it appears that there were 3,340 miles of railroad in the State, with a paid-up capital of \$77,694,737, and an indebtedness of \$58,931,686. The estimated crop of oats was 18,000,000 bushels; of corn, 90,000,000 bushels; and of hay, 2,000,000 tons. The average production of crops was equal to that of a series of preceding years. The fruit crop was an almost entire failure, owing to wintry storms and the extraordinary humidity of the atmosphere in April, May, and June. Of maple and sorghum sugar the production was 5,239,729 pounds; of molasses, 2,933,697 gallons.

During the year there were 23,198 marriages and 837 divorces; 2,811 indictments for crime, and 1,025 convictions; 11,477 civil suits brought and 8,778 judgments rendered. The number of violent deaths was 1,014. There were erected during the year, at an aggregate cost of \$4,830,912, 4,850 houses, 1,158 barns, 78 mills, and 811 furnaces, factories, etc.

The State furnished to the Federal Government, between the 15th of April, 1861, and the 15th of April, 1865, for different terms of service, varying from three months to three years, one hundred and ninety-eight regiments of infantry, raised and organized within the State, besides considerable numbers of men for the cavalry and artillery arms of the service. The aggregate number of troops furnished by the State was 817,133 for various terms of service, equal to 239,976 three years' men. Of these all had been discharged, with the exception of six regiments, mainly serving on the Rio Grande. Speaking of the retention of these Ohio volunteers in the field after the conclusion of the war, Governor Anderson said in his message of the 1st of January, 1866, that it was never

intended or expected that the noble patriots sent forth to fight in the war for the Union, were to be detained as a police guard to oversee political reforms in the South, whether as to whites or blacks, still less to be marched to the Rio Grande to menace or assault Maximilian or any other despot. In this connection, speaking of the Monroe doctrine, he said :

What the Monroe doctrine exactly is we have never agreed among ourselves. Its origin is doubtful, its purposes uncertain, its means to this day are unspecified. Mexico has never been and can never be a republic, unless her people will accommodate us to be born again, and of entirely different parentage. She, with all her sister republics of South America, has been from the beginning uninterruptedly a most violent, bloody, incendiary, disgraceful anarchy. She has continually inspired all nations with hate; has ruthlessly ruined and oppressed her own people. And her Government has brought disgrace alike upon the sacred name of republican liberty, and of human nature.

The Union State Convention met at Columbus on the 23d of June, and adopted nine resolutions, among which were the following :

Resolved, That the name and fame of Abraham Lincoln stand out from the history of the epoch unrivalled and alone, and while we deplore his untimely and cruel death and venerate his memory, it becomes us to imitate his wisdom, firmness, and moderation in the treatment of vexed questions, and especially to imitate his example in waiting for the solution of difficulties, to be furnished by the progress of time and the logic of events.

Resolved, That President Andrew Johnson, by his unwavering devotion to the Union through years of severest trial, has now our highest confidence, that we cheerfully endorse the policy of his administration, looking to the restoration of peace and civil order in the so-called seceded States, and that, as Union men of Ohio, we will give him our hearty and undivided support.

Resolved, That four years of sanguinary war, with its fearful sacrifice of life and treasure, forced upon us by the slaveholders' rebellion, have demonstrated to us and to the world that slavery and its institutions are irreconcilably opposed to freedom and free institutions; and all the teachings of history, the dealings of Providence, and our own bitter experience, point unerringly to their overthrow and eradication as our only safeguard against the recurrence of like evils in the future.

Resolved, That while we are anxious for an early reconstruction of fraternal relations with the insurgent States, we demand that such reconstruction shall be at such time and upon such terms as will give unquestioned assurance of the peace and security, not only of the loyal people of the rebel States, but also of the peace and prosperity of the Federal Union.

Resolved, That the experience of the last four years shows the absolute necessity in all our political action of keeping steadily in view the great principles of our Government as set forth in the Declaration of Independence.

The Chair decided that a motion to add the following resolutions, presented by Mr. Piatt, would be out of order :

Resolved, That it is the belief of this Convention that the reconstruction of the revolted States constitutionally belongs to the Legislative department, and that the Executive can only promise provisional military government until such time as Congress may act.

Resolved, That time can alone heal the wounds inflicted by this war, and therefore there is no cause for haste in the reconstruction of the revolted States;

and when the time comes for such reconstruction, our indemnity for the past and security for the future demand that the revolted States shall be given to loyal men only.

The Democratic Convention met also at Columbus, on the 24th of August, and adopted nineteen resolutions, of which the following were the most important :

Resolved, That the Democracy of Ohio will maintain and defend, as they have always heretofore done, as essential to the existence of our federal system of Government, the true doctrine of State rights, not nullification, nor secession, but the theory of that system as laid down in the Virginia and Kentucky resolutions of 1798, as interpreted by their authors, the one by Madison in his report of 1799, and the other by Jefferson in his solemn official inaugural of 1801.

Resolved, That their ordinances of secession being void, the so-called seceded States are in the Union as States, and are therefore entitled to all the reserved rights of the States, and to their due representation in Congress, and to vote at future elections of President and Vice-President; and any attempt of the General Government, or any department thereof, to deprive them of these rights, would be an assault upon the rights of every State in the Union, and an effort to overthrow the Government ordained by the Constitution.

Resolved, That to each State belongs the right to determine for itself the qualifications of its electors, and the General Government cannot, nor can any department thereof, interfere directly or indirectly with the exercise of this right without a palpable violation of the Constitution and of the reserved rights of the States.

Resolved, That the effort now being made to confer the right of suffrage upon negroes, is an insidious attempt to overthrow popular institutions by bringing the right to vote into disgrace; that the negroes are not competent to the exercise of that right, nor is it necessary to their safety or protection; on the contrary, its exercise by them, if attempted, would be fraught with terrible calamities to both them and the whites, and we are, therefore, unequivocally opposed to negro suffrage.

Resolved, That under the rule of abolitionism, and especially under the recent military orders in Kentucky, the emigration of negroes into Ohio is a growing evil; and in order that white labor should be protected against negro labor, and the people against negro pauperism, it is the duty of the Legislature to discourage negro emigration into our State.

Resolved, That we most explicitly condemn the policy of the party in power, in creating thousands of millions of Government debt, and attempting to exonerate the holders thereof from all obligations to pay their just proportion of taxes for the support of the State in which they reside, and thereby creating an odious and privileged moneyed aristocracy; and we declare it to be the immediate duty of Congress and the State Legislature to use all the legal and constitutional power they possess, to subject money so invested to a burden of taxation equal to that imposed upon other property for Federal, State, and municipal purposes.

Resolved, That freedom of speech, of the press, and of elections, *habeas corpus*, and trial by jury, are the birthright of all American citizens, guaranteed by both Federal and State Constitutions; that we will maintain and defend them as such in every extremity, and that we denounce especially the arrest of citizens by military authority in States or places where civil tribunals are established, and their execution, imprisonment, or trial by military commissions as palpable infractions of the Constitution and outrages upon public liberty and private rights.

Resolved, That the continued suspension of the writ

of *habeas corpus* since the termination of the war, and when all pretence of necessity is passed, the denial of the right of trial by jury, and the trial of citizens not in the military service by military commissions, and the open interference with elections by military power, as in the recent instances in Kentucky and Tennessee, are revolutionary violations of the Constitution, threatening the very existence of our most ancient and sacred rights; that they portend a danger to the liberties of the country greater than has ever before menaced them, and which it is the duty of all good citizens to meet with the most determined opposition and most sleepless vigilance.

Resolved, That while we will resolutely and persistently condemn all infractions of the Constitution, by whomsoever committed, while we regret that the terms of pacification agreed to by Maj.-Gen. Sherman, in April last, were not at once ratified by the Federal Executive, we will nevertheless stand by President Johnson in all constitutional efforts to restore the States to the exercise of their rights and power within the Union.

The election took place on the 10th of October, and resulted in the success of the Republican ticket. The number of votes received by Gen. Cox, Republican, was 223,633, which gave him a majority of 29,936 over his opponent, George W. Morgan.

Gen. Cox, in a letter published in July, after his nomination, had expressed himself as strongly opposed to negro suffrage. In his inaugural address to the Legislature on the 8th of January, 1866, speaking on the subject of reconstruction, he said:

It is in the excitement of a great struggle that the institutions of a country are in the most danger of change, and perhaps no nation has ever passed through such a convulsion as ours and then returned to the principles of government and exact form of constitution which it had before. The maxim that revolutions do not go backward, has seemed to have even a wider and deeper significance than has been popularly given to it. The same law of progression which has made the convulsions of monarchical governments tend toward the development of popular liberty, has in republics too often led to a despotism of classes or of factions, and thence by easy stages to anarchy and utter disruption. A victorious majority, flushed with its triumph, finds it easy to forget the rights of minorities; and it remains for us to prove whether, in our day, the old cry of "Woe to the conquered" may be silenced by a truly republican determination to administer the Government for the real advantage of all—of the defeated rebels as well as of the loyal victors.

OLDENBURG, a grand duchy in Germany. Reigning Grand Duke, Peter I., born July 8, 1827; succeeded his father, February 27, 1853. Heir apparent, Prince Friedrich August, born November 16, 1852. According to the Constitution of 1849 (revised 1852), the legislative power is exercised by a Landtag or Diet, elected for three years by all tax-paying citizens. The mode of election is indirect, every 300 voters choosing a delegate, and the delegates of 20 districts, representing 6,000 electors, appointing one deputy. In the "Budget" for 1865 the receipts were estimated at 2,254,060, and the expenditures at 2,347,860 thalers. The public debt amounted, in December, 1864, to 4,153,500 thalers. The army consists of 4,007 men. The area of the grand duchy embraces 2,417 square miles, with a population, accord-

ing to the census of 1864, of 301,812 souls (in 1861, 295,242); of whom 198,122 were Lutherans, 72,987 Roman Catholics, 27,987 members of the Evangelical Church, 1,196 Reformed, 1,576 Jews. The movement of shipping was, in 1863, as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
Oldenburg.....	6,800	101,905	6,714	118,305
Foreign	3,427	122,108	3,409	126,692
Total.....	9,727	223,913	10,123	244,997

The commercial navy consisted, in 1864, of 650 vessels, of a total burden of 33,339 lasts.

OREGON. An extra session of the Legislature was held at Salem in December, 1865, principally for the purpose of ratifying the anti-slavery amendment to the Constitution. The Republicans having a majority in both branches, this was done on the 11th of the month, and the Legislature soon after adjourned. As State officers and members of the Legislature and of Congress are chosen biennially and quadrennially in the even years, no election of any kind took place in Oregon in 1865. The next session of the Legislature will be held in September, 1866, and the next general election will take place in June of the same year.

The progress of Oregon, though comparatively less rapid than that of some of the neighboring States and Territories, to which rich discoveries of the precious metals have attracted a large mining population, has perhaps been more steady and sure. Her population has risen from 52,465 in 1860, to somewhat over 70,000 in 1865, and the agricultural resources of the State are being developed in a very satisfactory manner. The Oregon Navigation Company, organized in 1861 to open the navigation of the Columbia River and its branches, which drain a country of enormous extent, have now over twenty steamboats running, and by means of short railroads built around the Cascades and the Dalles, and wagon roads from the Dalles, from Umatilla, and from Wallula, have established the cheapest and quickest route for travel or freight from all parts of the coast to the rich mines of Boise and Owyhee in Idaho. Between 1861 and 1865 their boats carried to the upper Columbia upwards of 65,000 tons of freight and 100,000 passengers. Measures are now in progress to push their communications, by means of the navigation of the Snake River, into the heart of the Idaho gold region, and on beyond toward Utah. These improvements, when perfected, will open a much more ready means of access to the State from the Mississippi valley than is now available, and will greatly promote emigration. In the southern and eastern parts of the State deposits of gold of considerable richness have of late years been worked with success, but its chief source of wealth for the present will probably be found in its forests and fields. The former produce a red fir of great

size, which yields large amounts of turpentine, and is available for building purposes or fuel; and the latter, besides abundant crops of cereals, are not less adapted to the production of fruits

than those of the adjoining State of California. The crops of apples, pears, plums, and cherries, are described as almost exceeding belief in quantity, and of admirable quality.

P

PAGE, Hon. JOHN, formerly a United States Senator, and Governor of New Hampshire, born in Haverhill, N. H., May 21, 1787, died there September 8, 1865. His advantages for an education were the common school and a few terms at the academy of his native town. From early boyhood he was a practical farmer, and with the exception of absences while discharging public duties, he had always resided upon, and cultivated the old homestead acres which had descended to him from his ancestors. In 1815 he was appointed Principal Assessor of the Direct Tax for the Fifth District of New Hampshire, having for some time been assistant assessor. The first record of his appearance in political life is that of an active Democratic representative in the State Legislature of 1818. He was also a member of that body in 1819, 1820, and 1835. From 1828 to 1834 he was, with the exception of one year, annually elected Register of Deeds for Grafton County. During the years 1836 and 1837 he was a Senator in Congress from New Hampshire, having been elected to complete the unexpired term of Hon. Isaac Hill, who had resigned his seat. He was a State Councillor in 1838, and Governor from 1839 to 1842.

PALMERSTON, HENRY JOHN TEMPLE, third Viscount, a British statesman, for fifty years a member of the British Cabinet, and at his death First Lord of the Treasury and Premier of Great Britain, born at Broadlands, near Romsey, in Hampshire, October 20, 1784; died at his country seat, Brockett Hall, Herts, October 18, 1865. The Temple family have taken a prominent part in the affairs of Great Britain for more than two centuries and a half. Among the ancestors of Lord Palmerston were the secretary to Sir Philip Sidney, who settled in Ireland in 1609; his son, Master of the Rolls in Ireland, and an eminent lawyer; the celebrated Sir William Temple, one of the ablest and most accomplished men of his time, made a baronet by Charles II. for his great diplomatic services; and his nephew, Baron Temple, the first Viscount Palmerston, so created in 1772. Henry John Temple, the late Premier, received his early education at Harrow, entered the University of Edinburgh from thence, and, after studying mental philosophy under Dugald Stewart, returned to England, and in 1806 graduated Master of Arts from St John's College, Cambridge. He had succeeded to his title in 1802, but as an Irish peer, after the Union, he could only enter the House of Lords by election; and as his associations and attachments were all with England, he preferred a seat in the House

of Commons, and though but 22 years of age, contested in 1806 the representation of Cambridge University with Lord Henry Petty, but was defeated. He was, however, returned for the proprietary borough of Bletchingley. In the following year he again contested the University, but failed, when he was returned for Newport, Isle of Wight, which he continued to represent until 1811, when he was elected member for Cambridge, and was repeatedly reelected by that constituency for twenty years. In 1807 he was made a junior Lord of the Admiralty in the Duke of Portland's (Tory) administration, but did not attain to a seat in the Cabinet till 1809, when, on Lord Castlereagh's resignation of the Secretaryship of War, in consequence of his duel with Mr. Canning, Lord Palmerston succeeded him in that office. He continued to hold that office until 1828, under the successive administrations of Mr. Perceval, the Earl of Liverpool, Mr. Canning, Lord Goderich, and the Duke of Wellington, administrations of very different political complexions, but all appreciating and respecting his ability as War Secretary. In 1828, however, he retired from the War Office, the affairs of which he had managed with great skill and success, and threw himself into the ranks of the Whig opposition. This brought down upon him a torrent of vituperation from his former associates, at which he laughed and jested. In 1830 the Whigs came into power, under the premiership of Earl Grey, and with a programme of liberal measures which greatly disgusted the Conservative or Tory party. Cambridge University refused to return Lord Palmerston, but the borough of Bletchingley again elected him, and he took a seat in the Cabinet as Foreign Secretary. His policy in the Foreign Office was able, and often characterized by boldness and independence, but was generally in the interests of peace and good order. He recognized the independence of Belgium, and established the quadruple alliance between England, France, Spain, and Portugal for the maintenance of constitutional government in the two latter countries. The quadruple alliance for the protection of Turkish independence was also due to his exertions, and this and other measures created for him a high reputation as a diplomatist. When Earl Grey resigned, in 1834, he also went out of office, but resumed his position in 1835 in the Melbourne administration, and retained it till 1841. In this period of ten years of almost continuous power, he had made his foreign policy so marked that, all over Europe, men spoke of it, not as the foreign

measures of the British Government, but as the "Palmerston policy." In 1841 Sir Robert Peel again came into power, and Lord Palmerston took his place in the opposition, and harassed the Peel administration by his attacks on its foreign policy, especially in regard to the Ashburton Treaty of 1842 with the United States, which he persistently denominated the "Ashburton Capitulation." Early in 1845, foreseeing the speedy success of the Corn-Law League in their efforts to procure the entire repeal of the Corn Laws, Lord Palmerston publicly announced his conversion to the principle of absolute repeal. On Sir Robert Peel's resignation the same year, in order to allow the Liberal party to take the necessary action consequent upon the repeal, Lord John Russell, who was called to form a ministry, desired to have both Earl Grey and Lord Palmerston as members of his Cabinet, but the Earl refused to serve with Palmerston in consequence of his disagreement with him in his foreign policy, and the Cabinet was not organized. In 1846, however, Russell was more successful, and Palmerston was again installed as Minister of Foreign Affairs. The epoch was a stormy one, one difficult and intricate question after another coming up, and being disposed of by the Foreign Minister, who was really, though not nominally, the leader of the Government. Among these questions were: the troubles in Portugal; the Swiss question; the revolutionary movements of 1848; the Spanish *embroglio* of the same year; the Greek question, extending from 1847 to 1850; the Hungarian war, and the protection of the Hungarian chiefs; and, finally, the recognition of Louis Napoleon, and the formation of an *entente cordiale* with him, contrary to the wishes, and indeed almost in direct defiance of the expressed views of the Queen and Prince Albert. Lord Palmerston carried matters with a very high hand in this measure, opposing the arts of diplomacy and some of those of intrigue to the known wishes of the Queen, who, under the influence of Prince Albert, was strongly in favor of the German policy of non-recognition of Napoleon. Palmerston believed that the peace of Europe, and especially peace between Great Britain and France, could be best secured by an alliance with the Prince President, whose career he foresaw, and he hesitated at nothing to secure that alliance, and in more than one instance he neither took the Queen nor his colleagues entirely into his confidence in the measures he adopted. The displeasure of the Queen at his conduct is forcibly manifested in the following letter, which she addressed to Lord John Russell in 1850:

The Queen requires, first, that Lord Palmerston will distinctly state what he proposes in a given case, in order that the Queen may know as distinctly to what she is giving her royal sanction; secondly, having once given her sanction to a measure, that it be not arbitrarily altered or modified by the Minister. Such an act she must consider as failing in sincerity to the Crown, and justly to be visited by the exercise

of her constitutional right of dismissing that Minister. She expects to be kept informed of what passes between him and the Foreign Minister before important decisions are taken, based upon that intercourse; to receive the foreign despatches in good time, and to have the drafts for her approval sent to her in sufficient time to make herself acquainted with their contents before they must be sent off. The Queen thinks it best that Lord John Russell should show this letter to Lord Palmerston.

Lord Palmerston simply acknowledged the receipt of this document, but pursued his previous course, until, in 1851, Lord John Russell, who sympathized more than his colleague with the Queen, indicated to him that he must leave the Cabinet. He accordingly resigned, but the next year became Home Secretary in the Earl of Aberdeen's (coalition) administration, and in 1855 was called to the premiership on the breaking up of that administration. Under his Government the Russian war was brought to a close, the Indian mutiny occurred and was quelled, and the Chinese war commenced and carried on. The House, at the prompting of Mr. Cobden, passed a vote of censure upon the Premier for his policy in China, and a dissolution was had, but he was sustained, and continued in power till 1858, when he was defeated on the Conspiracy Bill, and resigned. Lord Derby's brief administration terminated in June, 1859, when Palmerston was again called to the premiership, which he retained till his death. His last illness was very brief and almost painless. Even up to old age (he was 81 years old at his death) he had always been a remarkably healthy and robust man, fond of all field sports, a sound sleeper, a jolly, rollicking, hearty Englishman, an embodiment of the traits and qualities of the Englishman of the nineteenth century, no better and no worse than the average men of his generation and nation. Though an aristocrat in every fibre of his being, he had the tact to fall in with the popular tastes of the masses, and throughout his long political career of nearly sixty years to keep upon the popular and winning side. He was a skilful diplomatist, but not a great statesman, preferring to carry his measures by diplomatic arts and intrigue rather than by planting himself squarely on the platform of a great principle. Principle, in its highest sense, he did not possess; he adhered, in turn, to nearly every phase of policy adopted by the different administrations of Great Britain during the last sixty years, and his sole criterion of the goodness of a measure was its chances for success. Lofty and self-sacrificing patriotism was something above his liking or comprehension; it was only when it culminated in successful results that he had a respect for it. He scoffed at and chaffed Cobden and Bright during the long years of their advocacy of the great principles for which they contended; but when they had won the battle, he promptly ranged himself on their side, and in 1859 offered Mr. Cobden a place in his cabinet, which that statesman civilly refused, on the ground that he had not such

confidence in the course which the Premier would pursue as would make him willing to be bound by his acts. Palmerston did not lack in physical courage, few of his class do, but more perhaps than the majority of English noblemen he was entitled to the reputation of being *plucky*. But though at times audacious, almost sublimely so, he was not a man of high moral courage, as no man who lacks moral principle can well be. A man of elegant culture, he would have been, had he not devoted himself so early and constantly to politics, a writer of marked ability. As it is, aside from his speeches and diplomatic papers, he has left little in the way of literary productions. The most notable of his early writings were some political squibs, written jointly by himself, Sir Robert Peel, and Mr. John Wilson Croker, in the Tory interest. "The New Whig Guide," one of these, contains from his pen a "Report of the Trial of Henry Brougham for calling Mr. Ponsonby an Old Woman." Another is a plan for arranging the "Red Book (the Parliamentary Catalogue of Members, etc.), on Scientific Principles, introducing the Linnæan System into Parliament." Both betray the satirical nature of the man. Two collections, neither of them complete, have been made of his more important speeches and diplomatic papers, viz.: "Opinions and Policy of the Right Hon. Viscount Palmerston, as Minister, Diplomatist, and Statesman, with a Memoir, by G. H. Francis" (8vo, 1852), and "Thirty Years of Foreign Policy, a History of the Secretaryships of the Earl of Aberdeen and Lord Palmerston" (8vo, 1855).

PARAGUAY, a republic in South America. President, Don Francisco Solano Lopez, born in 1827, assumed the Presidency on September 10, 1862, on the death of his father, the former President, Carlos Antonio Lopez. The President holds his office for life, and has, according to the Constitution, the right to appoint his successor by a will which is to be kept secret. In cases specially provided for by the Constitution, the President appoints a Vice-President. Thus, President Lopez, on May 25, 1865, appointed the Prime Minister, Francisco Sanchez, Vice-President. Other members of the ministry in 1865, Gen. Barrios (War and Navy); José Berges (Foreign Affairs); Mariano Gonzalez (Finances). Minister of the United States near the Government of Paraguay, Charles A. Washburne (appointed June 8, 1861).

The area of the republic is estimated at 73,000 English square miles; the population, according to a census of 1857, was 1,337,431 in twenty-five "commandancias" (departments). Capital, Assuncion, with 48,000 inhabitants. Nearly one-half of the entire territory consists of public lands. The sale of the *yerba mate* (Paraguay tea) and other products of the public lands constitutes one of the chief sources of public revenue. In 1859 they yielded 8,161,323 francs. By duties on imports and exports, the Government in the same year realized about 4,280,000 francs. Paraguay has

hitherto been without a public debt; but the national Congress, which was convoked in March, 1865, authorized the President to contract a loan of five million pounds sterling, for carrying on the war against Brazil, the Argentine Republic, and Uruguay. Before the war, the standing army consisted of 15,000 men, and the reserve of 46,000. According to a correspondence in the Paris *Moniteur*, from Assuncion, dated June 8, 1865, the army at that time consisted of the following troops: 40 battalions of infantry, at 700 men each, total 28,000; 82 regiments of cavalry, at 500 horses each, total 16,000; 3,000 artillery, with 120 pieces of ordnance; total about 47,000 men. The navy consisted of 18 steamers. The imports amounted in 1859 (according to the Paris *Moniteur* of January 15, 1863) to 8,833,000 francs (increase over 1858, 3,029,000), and exports to 7,703,000 (increase 3,029,000). The number of vessels which arrived and departed in 1859 was 412, of an average tonnage of 16,650.

On August 30, 1864, the Minister of Foreign Affairs notified the Brazilian minister at Assuncion of the protest of the Government of Paraguay against the execution of the threats contained in an ultimatum from Brazil to Uruguay (application of forcible measures; occupation of the country by Brazilian troops). This protest was renewed on September 3d. On November 11th, a Paraguayan war-vessel captured, without previous declaration of war, the Brazilian mail steamer *Marquez de Olinda*, on its passage to the Brazilian province of Matto Grosso, and declared the passengers prisoners of war. On the following day, November 12th, the Brazilian minister at Assuncion was notified that the Government of Paraguay, on account of the disregard of its protest of August 30th, by Brazil, regarded the Brazilian flag as hostile, and that henceforth the Paraguay River would be closed to all Brazilian vessels. On November 14th the Brazilian minister demanded and received his passports; and on November 17th the Government of Paraguay notified its diplomatic agents of what had occurred. On December 14th an army of Paraguayans left Assuncion to invade the Brazilian province of Matto Grosso. As the communication of the Government of Brazil with this province was entirely by way of the river, which the Paraguayans had blocked up, the Brazilians found themselves unable to make an effectual opposition to the invading army. On December 29th the fort of Nova Coimbra was, after a bombardment of two days, evacuated by the Brazilian garrison and occupied by the Paraguayans. This success was followed by the occupation of Miranda, Durados, Albuquerque (January 1, 1866), Corumba (January 3d), and (April 10, 1866) the capital of the province, Cuyaba.

In the meanwhile, the new Provisional President of Uruguay, Flores (*see* URUGUAY), had, on February 22th, concluded an alliance with Brazil against Paraguay; and as the Government of Paraguay suspected the Government of

the Argentine Republic of an intention to join the alliance, it did not wait for a formal declaration of war, but seized, in the first days of April, the Argentine vessel *Salto*, in the Paraguay River, near Assuncion. A few days later a Paraguayan army invaded the Argentine territory. On April 18th it captured two Argentine vessels in the port of Corrientes, and on April 14th occupied the city of Corrientes, where it appointed a provisional Government, consisting of three citizens of Corrientes. On April 16th the Argentine Republic declared war against Paraguay, which was followed, on April 18th, by a declaration of war against the Argentine Republic by the national Congress of Paraguay.

In the first days of June the city of Corrientes was recaptured by Gen. Paunero's Argentine Brigade, assisted by the Brazilian fleet and a small body of their infantry and artillery. The loss on both sides was considerable for the number in action, the allies losing two hundred and fifty out of eight hundred, and the Paraguayans about four hundred out of twelve or fifteen hundred, few prisoners being taken, and those mostly wounded. Three cannon, some arms and munitions, and a flag were captured from the Paraguayans. The victory had, however, little value, as, from want of supplies and sufficient force, no attempt was made to use the town as a basis, and it was evacuated on the following day, the Argentines returning to Esquina, and the Brazilian fleet proceeding to Tres Bocas to blockade the Paraguay, merely leaving a gunboat to watch Corrientes.

On the 10th of June the Paraguayans, to the number of eight thousand men, under Gen. Lagrune, with their baggage and artillery in the front, marched toward the passage of San Borja, on the Uruguay River, and launching nineteen flat-bottomed boats they had brought on carts, put on board twenty-five or thirty men and rowers on each, who crossed over, under cover of four pieces of cannon, which opened fire on the small force of one hundred and fifty Brazilians on the Rio Grande side of the Uruguay and dislodged them, forcing them to withdraw toward San Borja. By 11 o'clock the Paraguayans had five thousand men and six pieces of artillery on the Brazilian side, and pressed heavily on the Brazilians, who had been reinforced by the first battalion of volunteers and two hundred cavalry, and were drawn up with two pieces of cannon in the centre, in front of the little village of San Borja. Here a stand was made, but the Brazilians were overpowered and driven within the village, which, finding it hopeless to resist the superior force brought against them, they soon abandoned, retiring to Itú. The Brazilian loss was eighteen killed and twenty-nine wounded; and the Paraguayans lost heavily in the first detachment while crossing.

On July 11th they entered Itaquy, and on July 19th, 20th, and 21st they crossed the river Ibicuy without opposition, and occupied Uru-

guayana, an important Brazilian town on the Uruguay.

President Lopez, at this time, issued a decree, annexing the Argentine province of Corrientes to Paraguay, "in order," as he says, "to preserve the equilibrium of the Plate." All arms, horses, cattle, and woollen and cotton goods were declared articles of war, and as such appropriated by him for the army.

On June 11th a severe naval engagement took place, some three leagues below the city of Corrientes, at the mouth of the Riachuelo, between the Paraguayan fleet, which came down the Parana River, and the Brazilian fleet. The Paraguayan fleet was composed of eight steamers, the *Tacuari*, *Paraguay*, *Marquez de Olinda*, *Ipora*, *Ibera*, *Salto*, and *Jeju*, and six flat-boats mounting sixty-eight or eighty pounders. They also had a battery of forty rifled cannon of heavy calibre, from which they poured continued volleys of Congreve rockets, grape, etc. Their fleet carried boarding crews, mustering seventeen hundred men, and the land batteries were manned by two thousand horse and foot. The Brazilian fleet consisted of the *Amazonas* (eight guns), *Jequitinhonha* (eight guns), *Belmonte* (eight guns), *Araguary* (seven guns), *Ignatemy* (seven guns), *Paranahiba* (eight guns), *Beberibe* (seven guns), *Ypiranga* (six guns), *Mearim* (seven guns). The battle lasted from 9.30 A. M. to 6 P. M. The attack was begun by the Paraguayans, the *Tacuari* and *Marquez de Olinda* boarding the *Paranahiba*, and the *Salto* attacking the same vessel on the poop. A boarding party leaped on deck and soon were masters of all the upper part of the vessel, while a Paraguayan officer seized the helm and gave orders to the engineers. At the same time the Brazilian flag was hauled down, and the steamer all but captured, when the *Amazonas* came to her assistance and overpowered the assailants, recovering the *Paranahiba* and sinking the *Salto*. The *Tacuari* and *Olinda* drew off, but the latter went aground, and was immediately abandoned. The fight between the *Amazonas* and the three Paraguayan steamers was desperate and sanguinary, the former capturing the commanders of the *Olinda* and *Salto*; and Admiral Messa, of the *Tacuari*, was severely wounded in a hand-to-hand conflict. At this moment the Paraguay ran aground, being pursued by the *Araguary*, and burned by the Brazilians. But the imperial gunboat *Jequitinhonha* met with a like misfortune, and was abandoned after a severe conflict with the batteries. After the loss of the *Salto*, *Olinda*, and *Paraguay*, the Paraguayans got disheartened, and the *Amazonas* succeeded in sinking the *Jeju* and taking five flat-boats (the other being sunk), the rest of the fleet beat a precipitate retreat, the only vessels escaping being the *Tacuari*, *Ipora*, and *Ibera*. At six P. M. the battle was over, and the Brazilian fleet master of the day, having only lost one vessel. But the carnage was unprecedented, the loss of the Paraguayans being far

the greatest. The killed and wounded of the Brazilians exceeded three hundred, including nineteen officers; the Paraguayans' list was estimated at thirteen hundred men of the fleet *hors de combat*, and five hundred killed or wounded in the batteries. All the Brazilian vessels were more or less injured, but were soon repaired and ready again for service.

The allied land army was concentrated at Concordia, between the Uruguay and Parana. Gen. Urquiza visited Gen. Mitre on the 23d of July, and had a conference with him and the Brazilian commander. A review of all the allied armies there assembled took place upon the 24th. The total amounted to about 20,000 men, of whom 12,180 infantry, 3,000 cavalry, and 756 artillery, with 82 pieces of rifled cannon, formed the Brazilian army. On August 13th Gen. Flores made a junction with Paunero at the Mirinhay, some twenty miles from Restauracion, increasing his force to 9,000 infantry and cavalry, and 40 pieces of rifled cannon. On the 17th he found the Paraguayans, numbering about 3,000 men, who were prevented from joining or receiving reinforcements from the 7,000 of their troops on the other side at Uruguayana, in Rio Grande, by the Brazilian steamer Uruguay and two armed launches, drawn up in line of battle, with flanks and front protected by ditches, along the further side of the ravine of Ombusito, two miles from Restauracion, and near the overflowed corner formed by the confluence of the Yatay and Uruguay. In the battle which ensued, the Paraguayans were totally defeated, suffering a loss of 800 killed and 1,600 prisoners, including their commander, while the allied loss was only 250.

This success of Flores entirely cut off the Paraguayan army in Uruguayana from all possibility of retreat. An attempt to force a way through the besieging forces failed. The garrison held out until October, when they were forced to surrender. The allies captured five cannons, nine flags, and five thousand muskets.

In October the Paraguayans evacuated the province of Corrientes, and retreated unmolested into Paraguay; the allied army being at too great a distance to harass their retreating columns, which were also protected by the circumstances of much of the intervening country being under water from the heavy rains. The last division of the Paraguayan troops left the Argentine territory on the 24th of October.

The allies, in following the retreating Paraguayans, crossed the Corrientes River, and advanced toward the Parana, intending to concentrate their forces at Paso de la Patria, on the frontier of Paraguay. The Brazilian fleet was in November, 1865, at the mouth of the Paraguay, and was to carry the allied troops up the Parana to the point selected for further hostile operations. At Humaita, their stronghold, the Paraguayans had made extensive preparations to stop the further progress of the Brazilian vessels. The garrison of the fortress numbered from eight to ten thousand

men, the works were of the strongest kind, and most admirably mounted, and the sunken obstructions were of the most formidable character. Great mortality prevailed among the Brazilian soldiery, about one hundred and fifty dying per day, principally from starvation, in consequence of the mismanagement of the commissary department.

In a note of November 20th, the President of Paraguay complained to the President of the Argentine Republic of the bad treatment which Paraguayan prisoners received at the hands of the allies, who, he asserted, had been compelled to enlist in the allied army, and had even been reduced to slavery in Brazil. To this note, Gen. Mitre replied on November 25th, denying the charges made by President Lopez and the Brazilian Minister of War, by a note dated December 22d, annexed to the answer of Gen. Mitre.

PENNSYLVANIA. The number of troops furnished by this State to the Federal Government during the war, exclusive of militia and seamen and marines for the navy, was, in 1861, 130,594; in 1862, 71,100; in 1863, 43,046; in 1864, 91,704; in 1865, 25,840—a total of 362,284. Of these very few remained in the service at the end of the year. Over 43,000 military commissions also were issued from this State during the continuance of hostilities. Arrangements were in progress, in accordance with an act of the Assembly, to collect materials for a complete history of the various State regiments. From the report of the Hon. T. H. Burrowes, under whose management was placed the system adopted by the State for the maintenance and education of soldiers' orphans, it appears that 1,846 applications for admission to the schools had been allowed, and that 1,242 orphans had been actually admitted. Gov. Curtin, in his message of January 31, 1866, speaking of these schools, says: "I have heretofore commended this charity to you, and I deem it unnecessary to add another word in asking a continuance of an appropriation which is to provide for and educate the best blood of the State."

Notwithstanding the large expenditures for military purposes since the outbreak of the war, the State debt was, on the 1st of December, 1865, less by \$402,939 than on the first of January, 1861, and the condition of the Treasury was \$2,555,579 better than at that time.

The balance in the Treasury November 30, 1864,	
was.....	\$1,942,208 63
Receipts during fiscal year ending November	
30, 1865.....	6,219,980 67

Total in Treasury for fiscal year ending No-	
vember 30, 1865.....	\$8,162,198 30
The payments for the same period were.....	5,793,525 16

Balance in Treasury November 30, 1865.....	\$2,378,663 14
--	----------------

The operations of the sinking fund during the year ending on the first Monday of September, which reduced the State debt by \$745,811, were as follows:

Five per cent.....	\$436,824 62
Coupon loan.....	230,000 00
War loan.....	78,400 00
Interest certificates.....	2,008 64
Domestic creditors.....	578 00

The total debt on December 1, 1864, was \$39,879,603.94. The amount redeemed during the fiscal year ending November 30th was as follows:

Five per cent. stocks.....	\$1,708,517 88
Four and a half per cent. stocks.....	30,000 00
Domestic creditor certificates.....	578 00
Military loan, act of May 15, 1861.....	179,250 00

Total.....\$1,908,345 88

Making the total public debt on the 1st of December, 1865, \$37,476,258.06. The assets and liabilities of the State Treasury were as follows:

Bonds Pennsylvania Railroad Company.....	\$6,700,000 00
Bonds Philadelphia and Erie Railroad Co.....	8,500,000 00
Interest on bonds Philadelphia and Erie Railroad Co.....	1,050,000 00
Cash in Treasury.....	2,378,668 14

Total.....\$18,628,668 14

Liabilities in excess of assets.....\$23,852,589 92

Liabilities in excess of assets, Nov. 30, 1860.....\$26,408,168 94

Liabilities in excess of assets, Nov. 30, 1865.....23,852,589 92

Improvement in condition of Treasury since Nov. 30, 1860.....\$2,555,579 02

The extraordinary State expenditures growing out of the war, not refunded by the General Government, amounted to the sum of \$4,028,627.21. This included the direct tax not reimbursable, and the sum of \$671,476.43 paid to the militia called out on the 27th of June, 1863, which Gov. Curtin claimed as clearly due to the State from the General Government. The Governor gives the following history of this claim in his message of January 31, 1866:

At the time of the invasion of the North, in 1863, by the rebel army, the President made a requisition on me for militia to serve during the emergency. The men came forward promptly, to the number of 38,588, of whom upward of 25,000 refused to be mustered into the service of the United States, in consequence of circumstances of prior occurrence not necessary to be here stated.

In this embarrassment, the emergency being very pressing, after consultation with the President, he authorized and requested me to call them on behalf of the State, and for the defence of the State, the United States paying all the expenses of their clothing, equipment, subsistence, etc. It was, however, alleged that there was no appropriation for their pay. To remove this difficulty the General Government applied to banks and other moneyed corporations in Philadelphia, to advance the amount of the pay, on a pledge that, when Congress met, the passage of a bill to reimburse them should be recommended. These institutions declined this proposition, but expressed their willingness to make the advance if I would pledge myself to recommend to the Legislature the passage of such an act in case Congress should not provide for reimbursing them. Under these circumstances, I received from the Executive of the United States the pledge which he had proposed to give to the banks, etc., and upon that I gave the necessary pledge to them, and they advanced the required funds accordingly.

When Congress met, the Executive of the United States did not recommend the passage of the necessary act. I have understood that the subject was called to the attention of the proper committee by the Secretary of War, but, as the President did not

send a message explaining the circumstances of the case, the appropriation failed, as the members of Congress had thus no means of explaining to their constituents the difference between this case (which was in substance a loan to the United States, upon the pledge of the Executive for its repayment), and the case of the voluntary expenditure of money for military purposes by Pennsylvania and most of the other States.

I will add, that the men came into the service for the emergency only, and on the faith that they should be discharged as soon as, in my judgment, the emergency should have ceased. The emergency ceased immediately after the battle of Gettysburg, which commenced on the 1st of July, 1863; yet the men, against my urgent and repeated remonstrances, were kept in the service long afterwards, and used by the United States for various purposes. The last of them were not discharged till in September.

I recommend that the Legislature adopt measures to bring the subject again before Congress, and obtain repayment of this sum, amounting to \$671,476.43, with interest on the same, which the General Government has thus far so unwarrantably withheld.

The total number of common schools in the State was 12,960. The whole number of teachers was 15,593, and of pupils of 703,930, at an average cost for each pupil per month of 68 cents. The total cost of the common school system in the State, including taxes levied, the amount paid by the city of Philadelphia, and the State appropriation, was \$3,614,239. In Philadelphia there were 376 free schools, 74,343 pupils, with an average attendance of 86½ per cent., 84 male teachers and 1,194 female teachers. The State Superintendent, in his annual report, expresses the opinion that it would promote the cause of general education to have all the educational interests in the State, including colleges, seminaries, and academies, brought within the scope of legislative authority, and to have all the chartered institutions placed "to a certain extent" under the control of the School Department. He also urged the propriety of lessening the number of the higher institutions, and thereby increasing the endowments and income of those that remains. He says that by their multiplicity they are crippled in their operations, many of them being in want of adequate apparatus, furniture, libraries, and cabinets, while some of them suffer for lack of patronage. He recommends also that more ground should be allotted to schools, so as to afford abundant room for exercise and play, and that the location of schools should, if possible, be where the scenery would attract the eye and favor the cultivation of a taste for the beautiful.

The Union State Convention assembled at Harrisburg on the 17th of August, and adopted a series of resolutions—recognizing the services of the soldiers and sailors who had shown that the war for the restoration of the Union was not a "failure;" expressive of reverence for the memory of Abraham Lincoln, and of a determination to support "his fellow-patriot and successor" Andrew Johnson; asserting "that the mild and generous method of reconstruction offered by the President to the people lately in rebellion, in the judgment of this convention, has not been accepted in the spirit of

honest loyalty and gratitude, but with such evidence of defiance and hostility as to impel us to the conviction that they cannot safely be intrusted with the political rights which they forfeited by their treason, until they have proven their acceptance of the results of the war by incorporating them in constitutional provisions, and securing to all men within their borders their inalienable rights to life, liberty, and the pursuit of happiness;" urging that the rebellious States, having been conquered, should be held in subjection, and that the treatment they should receive, as well as the laws which should govern them, "should be referred to the law-making power of the nation, to which it legitimately belongs;" recommending that the property-holders of the South should be compelled to pay the expenses of the war, and "that Congress should declare as forfeited and vested in the Government, the property of all rebels whose estates exceed the sum of ten thousand dollars, and that the proceeds of the property so confiscated should be applied to increase the pensions of those entitled thereto by the casualties of the war, to pay the damages done by the enemy to loyal citizens, and to reduce the burden of the national debt;" advising such a revision of the revenue laws as would insure increased protection to American industry; asserting any attempt by foreign nations to establish monarchical government on the American continent to be evidence of a design to destroy republican institutions; in favor of the payment of the full Federal bounty to all honorably discharged soldiers; commending and thanking Edwin M. Stanton and his colleagues in the cabinet for their "services in the cause of liberty and law;" thanking Gov. Curtin for his devotion "to the best interests of the State and nation during the last four years;" recognizing the claims of the citizen soldiers to confidence and gratitude, and recommending that especial regard be paid to their deserts in nominations for offices. The twelfth and last resolution accused the Democratic party of having constantly obstructed the efforts of the constituted authorities to maintain the life of the Republic—

By inflaming the passions of their ignorant followers against the legally elected officers of the Federal Government, and refraining from all reproach against treason or armed traitors:

By procuring a decision from the Democratic judges of our Supreme Court, denying the right of the Government to the services of the citizens of this State for the defence of their imperilled country:

By discouraging men from volunteering into the armies of the Union; thus rendering it necessary to succumb to treason, or to pay large bounties, and so burdening every ward, township, and borough in the State with debt to fill the ranks of our armies:

By opposing the enlistment of negroes for our defence, although one white man less was required for every black one who could be enlisted, and this at the very moment when the battle of Gettysburg was raging on the soil of Pennsylvania, and the result of that decisive battle was uncertain:

By denying to our soldiers the right to vote while fighting for the flag of our fathers, on the plea that

such rights were not allowed by our Constitution, and by opposing an amendment which removed their objections, and relieved our brave soldiers from disability:

By exaggerating the public indebtedness, denying the public credit, and teaching that the financial resources of the North were unequal to the suppression of the rebellion:

By a shameful opposition to measures for extending relief to the families of Union soldiers, and by a malignant effort by these means to secure the success of the rebels in the field, or such a protraction of the war as would exhaust the nation in its effort to subdue their friends:

By now heaping abuse upon the Government for punishing assassins and their accomplices; by demanding the release of leading traitors, by frowning down all attempts to bring to punishment the fiends who starved our soldiers, and by assuring rebels that neither in person nor property shall they be punished for their crimes:

And if any thing were wanting to complete their infamy, we have it in their determined opposition to free labor, and to a tariff which, while it would make labor profitable by protecting the workmen of Pennsylvania from British competition, would largely increase the revenue essential to the maintenance of the public faith and credit.

The Democratic State Convention assembled also at Harrisburg on the 24th of August. The preamble to the resolutions asserted that the men and the party who had administered the Government since 1861, had "betrayed their trust, violated their sacred obligations, disregarded the commands of the fundamental law, corruptly squandered the public money, denied justice to the people, perverted the whole Government from its original purpose, and thereby brought untold calamities upon the country. Twelve resolutions were adopted, asserting that the Democratic party was, and always had been, faithful to the Union of the States, and while opposing secession with all its influence, had been without sympathy with that party in the North which pronounced the Constitution a "covenant with death and an agreement with hell;" asserting that if the counsels of the Democratic party had prevailed, "the Union would have been saved in all its honor and integrity, without the slaughter, debt, and disgrace of a civil war;" asserting that the Constitution is entitled to unqualified respect and obedience, and that "the oath to support it is binding, religiously, morally, and legally, at all times, under all circumstances, and in every part of the country," and that it is "only by a strict enforcement of its obligations in all the States, that we can hope for union, liberty, or peace;" claiming that among the rights guaranteed by the Constitution are, "a free press, freedom from arbitrary arrest and illegal imprisonment, trial by jury, the writ of *habeas corpus*, the perfect immunity of all persons not in the army or navy from any species of punishment for crime or pretended crime which is not the legal consequence of a legal conviction by an impartial jury, the absolute subordination of all military power to the civil authority, and the privilege of white citizens to vote at the State elections according to the laws of the State;" concurring with President Johnson in the con-

viction that, "the Federal Government is sovereign within its proper sphere—that it acts not through or upon the States, but directly upon individuals—that the States could not absolve the people from their Federal obligations—that the State ordinances of secession were nullities, and therefore, when the attempted revolution came to an end by the submission of the insurgents, the States were as much a part of the Union as they had been before;" asserting that the effort making by certain persons "to use the power of the General Government with a view to force negro suffrage on the States against the will of the people, and contrary to existing laws, is not only a high crime against the Constitution, but a deliberate and wicked attempt to put the States of this Union—all of them more or less and some of them entirely—under the domination of negroes, to Africanize a large portion of the country, and degrade the white race, morally and socially, as well as politically, to the low level of the black;" pledging the party to support President Johnson's reconstruction policy, "in the belief that he will execute the law, the whole law, and nothing but the law, in all parts of the country—that he will not allow the military to interfere with State elections—that he will punish kidnapping and robbery through the legal authorities, whether committed by Federal officers or private citizens, and that he will suffer no person to be murdered by military commission;" urging—in view of the enormous national debt, and the great weight of State and local taxes—retrenchment and economy, the disbanding of the army, and the reduction of the navy; recommending such a revision of the revenue laws as to make taxation equal and just; expressing gratitude to the soldiers of the republic, but repelling the assertion "that they fought and bled and died mainly for the freedom of the negro" as a "gross insult on their patriotism;" recognizing "the noble manner in which the Democratic press of this Commonwealth have contended for the liberties of the nation;" and reaffirming adherence to the Monroe doctrine.

The election took place on the 10th of October, and resulted in the success of the Union nominees, General Hartranft, the candidate for Auditor-General, receiving 238,400 votes, which gave him a majority of 22,660 over his opponent, Colonel W. W. H. Davis.

At a meeting of colored men, held in Philadelphia, on the 17th of July, to take into consideration the question of negro suffrage, the following resolutions were adopted:

Resolved, That the apparent anxiety to preserve the ballot-box from the influence of the ignorance of the colored man is proved, by the class of men invited and urged to the polls at every election, to be but a hypocritical and malignant subterfuge.

Resolved, That the objection that, if enfranchised, the freedmen of the South will permit themselves to be used by their former oppressors, can only be founded on the fallacious presumption that he can be made to do, now that he is free, what he could not be forced to do when a slave.

PERSIA, a country in Asia. It is bounded on the west by Asiatic Turkey, on the north by the Russian Government of Trans-Caucasia, the Caspian Sea, and the Desert of Khiva, on the east by Afghanistan and Beloochistan, and on the south by the Arabian Sea and the Persian Gulf. The sovereign ("Shah") of Persia is an absolute and uncontrolled monarch. Present Shah, Nasser-eh-Din, born in 1829, succeeded his father, Mohammed-Shah, in 1848; heir apparent, Mouzaffer-eh-Din-Mirza. The ministry was, in 1865, composed of Mirza-Mohammed-Khan (War and Presidency of the Ministry); Mirza-Said-Khan (Interior); Mirza-Yusuf (Finances). The diplomatic corps at Teheran consists of ministers plenipotentiary of France, England, Russia, and Turkey.

The army numbers at present ninety regiments or battalions of regular infantry, at 800 men each; fifty-three squadrons of regular cavalry, at 500 men each; 5,000 men, artillery, and 200 men, light artillery, and 30,000 cavalry.

It is difficult to ascertain the number of inhabitants, as no lists of births and deaths are kept, and no complete census has ever been taken. In 1859 the Shah ordered a census to be taken, but it was found impossible to carry it through, against the persistent opposition which was everywhere made to it from religious prejudices. The number of the nomadic population can, however, easily be estimated, as their chief ("Ilkhani") knows exactly the number of tents of his tribe. They number a little over 3,000,000. The population is about 10,000,000.

According to descent, the population consists of aborigines (Persians and Medes), Tartars, Turks, Koords, Arabs, Armenians, Nestorians, Jews, descendants of Turcomanni, Russians, and Poles. The Koords, who, in their physical constitution, show a great similarity to the Germans, and speak their own language (which belongs to the Iranic family of languages), are governed by a Governor ("Wali"), who is appointed by the Shah, though the dignity is hereditary in a family, which claims to descend from the house of the Sassanides. The number of the Armenians, as well as their former riches and commerce, have more recently been greatly reduced. Tatus Khan, the Armenian Bishop of Ispahan, assured Dr. Polak,* that the population of his diocese, which extends from Java and India to Kaslan Kuh in Persia, amounted to only 20,000; to these are to be added a small number of Roman Catholic Armenians and a few hundred families in Tabris and the neighborhood, belonging to the diocese of Uch Miazin. Ispahan has at present the largest

* Polak, *Persien, Das Land und seine Bewohner* (Leipzig, 1863, 2 vols.). The author of this work, from which the information given in this article has been chiefly derived, was one of six Austrians who, upon the invitation of the Persian Government, went in 1851 to Teheran to establish a military and a medical school. He also became the court physician of the Shah. He published at Teheran several works in the Persian language; as *Manuals of "Anatomy" (1864); "Surgery" (1867)*. Some of his pupils were sent to Paris, where they graduated and published medical treatises. (See vol. I. p. 811.)

Armenian population of any Persian town; still the number of families does hardly exceed 400, instead of the 12,000 which lived there formerly. With the exception of a few merchants in Tabris, the congregations are very poor, and living upon poor agriculture and manufacture of wine. They suffer greatly from the despotic and arbitrary acts of the Governors, although they are at present enjoying in some respects the protection of Russia. To this external oppression are frequently added serious troubles between those Armenians which have joined the Roman Catholic Church (United Armenians) and those which adhere to the old Armenian Church (Non-United Armenians). In consequence of their unfavorable situation in Persia, emigration to Russia and India is becoming frequent, especially among the younger generation. From India, the Armenians of Persia are already receiving large sums for the support of their churches and their poor.*

Among the Nestorians, Romans Catholic and American Protestant (of the American Board of Commissioners of Foreign Missions) missionaries have been laboring for many years. Both have established churches and schools. The Shah, in 1866, granted to the friends of the Protestant missionaries a new site for a church, and subscribed himself £100 for its erection. The English ambassador also subscribed £50, and the Shah also appointed General Gehangir Khan, an Armenian, to represent the interests of the Protestant Nestorian community.

The Jews were very numerous and powerful in southern Persia in the times of the Sassanids, and ever since the beginning of the Mohammedan rule. But oppression and persecution have reduced their number to such an extent that, as a learned Jewish Mula (rabbi) assured Dr. Polak, they are now estimated at only about 2,000. They constitute three large congregations in Shiraz, Ispahan, and Kashan, and smaller ones in Teheran, Demavend, Balafush, and Kazeran. The Persian Jews are allowed to live in polygamy, but actual cases of polygamy are rare, on account of their extreme poverty. They still have to-day the capitation tax which was imposed upon the Jews by Mohammed. The continuous persecution induced most of the Jews to emigrate to Turkey and the Eastern countries, although the Government tried to prevent emigration in every possible way. In 1865 Sir Moses Montefiore, of England, made efforts to relieve his coreligionists in Persia from the tyranny under which they were groaning. The British minister in Teheran received the assurance that the Jewish subjects of the Shah should be no longer oppressed. In Persia, Jews are always engaged in the mint, and many of them are celebrated as physicians. The Persian Jews still continue to make pilgrimages to the tomb of Esther, in Hamadais (the ancient

Ecbatana), their only national monument. The Parsees, or, as they call themselves, Zerdush-tee, still live in small numbers in the towns of Yezd and Kerman. The wealthier Parsees, in India, annually send them large sums of money, in order to satisfy the extortion of the Governors; for they desire that a small remnant of the adherents of Zoroaster remain in their native land and preserve the holy fire. A delegate, the Manookishee Sahib, was sent by them to Teheran, to obtain the permission to pay the taxes for the Persian Parsees, and to establish an educational institution. The Persian Government refused both requests; the former because it was regarded as an infringement upon the sovereignty of the Shah, the second on the ground that it could not grant permission for the establishment of an idolatrous institution. The Parsee merchants and agriculturists enjoy the reputation of industry, perseverance, and honesty. They conduct the commerce with India. Among themselves they still use the old Persian language. Their priests are called Mabeds. Although the Shah is of a different religion, they regard him as their legitimate ruler, and reverence him as the successor of Kaos and Djemshid. Their numbers amount to about 8,000 or 9,000.

The number of European residents in Persia is very small. They comprise a limited number of merchants (Frenchmen, Greeks, Germans, Swiss, and Russians), a few military officers, physicians, and mechanics. They live mostly in Tabris and Teheran.

The art of printing was introduced into Persia at the beginning of the nineteenth century, by the Prince Abbaz Mirza Nayibe-Sultaneh. But the Persians have never learned to appreciate it, and the number of books printed is very small. A great extension, on the other hand, has been given to lithography. Every large town has one or several lithographic institutions, in which a considerable number of dictionaries, historical and poetical works, treatises of a religious character, etc., have been lithographed. Libraries are very rare; the royal collection of Persian and Arabic works embraces no more than 800 manuscripts and a few printed European books. The largest library of Persia, that of Ardebil, has been carried off by the Russians to St. Petersburg, where, it is said, now the most beautiful Persian and Arabic manuscripts are to be found.

For several years a lithographed official weekly newspaper has been published at Teheran, at an annual subscription price of two and a half ducats. In its first part the paper gives court news, distinctions, appointments. The name of the Shah is always accompanied by some titles, and prayers for the preservation of his life. Next follow reports from the provinces, generally to the effect, that "owing to the justice and circumspection of the Governor, the 'rayet' (subjects) enjoy undisturbed happiness," that "impartiality and justice prevail at the raising of taxes; that the ways and bridges

* The Gotha Almanac for 1866 estimates the number of Armenians as high as 200,000, and that of the Nestorians at 100,000.

are in a good condition." Stories of miraculous cures, etc., fill the remainder of the space. In case of scarcity of material, one page is left blank, or European news is taken from the Turkish journal in Constantinople. At the time when England and Persia had fallen out, the *Teheran Gazette* had frequently polemical articles and manifestoes against England. The Persian Government at the same time used the "*Journal de Smyrne*" in the Persian interest.

The majority of the Persians, about 7,500,000, are Mohammedans of the sect of the Sheah. The Sunnites live especially in Koordistan near the Persian Gulf, in Talish near the Caspian Sea, and number altogether about 1,500,000 souls. The sect of the Sheikhi does not differ much from the Sheah. Their system treats especially of subtle details concerning the form of existence of the Imam Meihdi, who, they believe, will make his appearance on the day of resurrection. Under the name of Ali Allah all those sects are comprised who believe in the incarnation of Ali, regarding him either as a direct incarnation of God, or as an indirect one through Abraham, Moses, David, and Jesus Christ. They deny the validity of the Koran, do not perform the "prayer," and do not observe the laws of purification and of food. Their chief seat is at and near Kermanshah, where their ecclesiastical chief resides. Scattered, they live in all parts of the country. One branch, Davoodi, occupies the region around Kasooiin, and the villages which lie near Resht.

Of more recent origin is the sect of the Bábis,* whose history forms one of the most interesting episodes both of the modern history of Persia and the recent history of Mohammedanism. The sect is named after their founder, who called himself "Báb-eddin" ("the Gate of Faith"). His first public appearance was in the year 1848. He was at that time a young man, bearing the name Mirza Ali Mohammed. Earnestly inquiring after truth and religious progress, the young man made a pilgrimage from Shiraz, his native town, to Mecca, which led him to renounce the prevailing form of Islamism. Soon he felt a vocation to bring about a thorough reform of Mohammedanism, or rather to establish a new religion out of a mixture of Mohammedan, Christian, Jewish, and Parsee views. The rare gifts, and especially the great eloquence of the pious enthusiast, soon attracted disciples from all sides. Among

* The first thorough work on the history and the origin of the Bábis has just been published by Count de Gobineau, under the title *Les Religions et Philosophies dans l'Asie Centrale* (Paris 1866). The author was formerly French minister in Teheran. Before him but little had been published in Europe concerning the Bábis. (See *Zeitschrift der Deutschen Morgenländ. Gesellschaft*, vol. v.; *Petermann, Reisen im Orient*, vol. II.; Polak, *Persien*, vol. I., pp. 350-354.) Count Gobineau, in an introduction to his work, treats at length of the religious and moral character of the Asiatics, of Persian Mohammedanism, on the origin and the substance of the Sheah, on Sufism, on the influence of European ideas in Persia, etc. The history of the Bábis is followed by treatises on their doctrines (a kind of Unitarianism), on the theatre in Persia, and, as a concluding appendix, he gives the sacred book of the Bábis, "The Book of Precepts."

them was the most learned woman of Persia, to whom the name Gurrat-el-Ain ("Delight of the Eye") was given, and who subsequently with numerous other followers suffered death for her faith. Some of the most zealous disciples of the Báb, or, as his followers called him, the "Hezret-e-Ala" ("Elevated Highness"), were sent out as Dai (apostles) to different parts of Persia, and even to the capital, Teheran. The leader of these apostles applied the work of the ingenious mystic to the dangerous field of politics. The Báb did not oppose these schemes of the apostles (eighteen in number), although it was not in accordance with his own character and original designs. He thus became involved in the sad fate which his followers brought upon themselves by a rising against the lawful authorities of the country. After a two years' imprisonment, during which he composed numerous writings, he was put to death in a horrible manner. His death, however, did not put an end to the sect, which, on the contrary, continued to gain numerous adherents in all parts of the country, until a plot against the life of the Shah called forth a war of extermination against them. But the general opinion of those best acquainted with Persian affairs is, that Bábism is not yet extinct, but still has large numbers of followers.

PERU, a republic in South America. Provisional President (Dictator) since November 1865, Gen. Prado. Congress is composed of a Senate (two members for every department), and Chamber of Deputies (one Deputy for every 20,000 inhabitants). In 1864 the Senate was composed of 36, and the Chamber of Deputies of 86 members. Area 508,986 square miles; and the population in 1860, 2,865,000.

The Government having hypothecated the receipts from the sale of guano for the years 1865 and 1866, the revenue for these years consisted exclusively of the receipts from duties. The latter amounted, in 1863, to \$3,511,669; and in 1864, to \$2,835,981. The public debt amounted on December 31, 1864, to \$32,399,939.

The fleet which Peru, at the beginning of the year 1865, opposed to that of Spain, was composed of the following steamers: Callao, 30 cannon (68-pounders); Amazonas, 36 cannon (68 and 32-pounders); Chalaco, four cannon (68-pounders); Lersundi, two cannon (68-pounders); Tumbes, four cannon (32-pounders); Chancamaya, 2 cannon (32-pounders); two iron-clads, Loa, with two cannon (100-pounders), and the monitor Victoria, with two cannon (68-pounders); finally one brig carrying 12 rifled guns (16-pounders); together nine vessels, carrying 94 cannon. The army, in 1864, was composed as follows:

Infantry	8,400
Cavalry	1,200
Artillery	1,000
Total	10,600
Genesdarmes	5,408

The imports were estimated, in the year 1861, at \$32,000,000, and the exports at

\$80,000,000. In 1862 the imports were valued at \$27,160,000, and the exports at \$32,900,000. The exports, in 1863, amounted to \$33,522,174. The shipments of guano, in 1862, amounted to 304,662 tons, at 2,240 pounds each, at an average price of \$40 a ton. The movement of shipping, in the port of Callao, was in 1862 1,207 vessels, of an aggregate tonnage of 690,512, not including 129 English mail steamers, having together 106,119 tons. The merchant navy numbered, in 1861, 110 vessels, of 24,284 tons.

A source of immense wealth to Peru are the Guano or Chinch Islands. These islands, among the smallest and (for their size) richest in the known world, are situate in latitude 18° 40' south, and longitude 76° 28' west of Greenwich, lying about 12 miles from the little seaport town of Pisco, on the Peruvian coast. Their extent, superficially, does not exceed two and a half square miles, the northern isle being the largest, the middle somewhat less, and the southern the smallest of the three; they have, however (notwithstanding their diminutive size), for years past supplied cargoes of guano to an average of four hundred ships per annum, with a freightage of not less than \$9,000,000, the value of such cargoes in Europe being upwards of \$30,000,000 in gold. They are, moreover, more densely populated than any others of like extent, having upwards of 2,000 residents, about 600 of whom are Chinese laborers in the employment of the Government contractor for the loading of the shipping. There are on the north island several stores belonging to Europeans and Americans, from which the shipping can obtain almost all they require. The water and meat supply is obtained from Paraca Bay and Pisco respectively; the former by water launches owned by private hands, the latter by regular Pisco traders who bring the cattle over to the islands daily, where they are killed as required; fruit and vegetables find their way through a similar channel.

Before the war with Spain, the British vice-consul for Pisco resided on the north island, and the Peruvian Government was represented by an acting governor and staff of officials, a captain of the port, and with some forty soldiers, who acted in the double capacity of police and military men. The health of the islands as a rule is good; but during the summer months dysentery prevails, and sometimes assumes a very grave form. The medical profession, in 1865, was represented by one native of Ecuador; upon the staff one German, an old resident; one American, who had charge of the hospital provided for the sick Chinamen; and one Englishman, who was not really a resident, as he lived afloat, and practised only amongst the shipping. The Pacific Steam Navigation Company's steamers used to call at the islands twice a week, and the mails arrived and were despatched twice a month.

The Government of Peru has for some years been making endeavors to encourage foreign immigration, but thus far with only moderate

success. It is reported, however, that the German colony in the Pozuzu, established in 1857, is promising now the most flattering results. The Pozuzu is situated on the highway, destined to lead from Lima or from the Pacific Ocean to the rich countries of the Amazonas. The German settlement, although small in number of colonists, is already yielding rich crops of coffee, vanilla, etc., which are exported from the Montafia to the mining-district Cerro de Pasco.

The beginning of the year 1865 found Peru in war with Spain. On December 29, 1864, Gen. M. J. Vivanco had been despatched by President Pezet to the Chinch Islands, to negotiate with the Spanish admiral about the conclusion of peace. These negotiations not leading to a settlement of the difficulty, Vice-Admiral Pareja appeared on January 28, 1865, with his squadron before the port of Callao, and presented an ultimatum. This was accepted by Gen. Pezet, and on January 27th a treaty of peace was signed by Gen. Vivanco on the part of Peru, and by Vice-Admiral Pareja on the part of Spain.

The substance of this treaty is as follows:

ART. 1. The Spanish Government having disapproved the occupation by its agents of the Chinch Islands on the title of "revindication," and the Government of Peru having promptly disapproved the acts of violence attempted against the Spanish commissioner at Panama, the chief obstacle to the evacuation of the Chinch Islands is removed, and they therefore shall be evacuated by the naval forces of Spain, and surrendered to the person whom the Government of Peru may appoint.

ART. 2. The Government of Peru will accredit a minister near the Government of Spain.

ART. 3. As the Government of Spain, in its diplomatic circulars of June 24 and November 8, 1864, has declared that the title of Special Commissioner does not affect the right of Peru to its independence; the Government of Peru will receive at Lima a "Special Commissioner" of Spain, charged with investigating the occurrence of Talambo.*

ART. 4. Peru will give to its minister in Spain full power to negotiate and conclude a treaty of peace, amity, navigation, and commerce.

ART. 5. In this treaty shall at the same time be established the basis for the liquidation, recognition, and payment of the amount which Peru, on account of sequester, confiscation, loan of the war of independence, or from any other motive, owes to subjects of Spain.

ART. 6. The liquidation and recognition mentioned in the preceding article, shall be made in virtue of documented, authentic, and official proofs.

ART. 7. In doubtful cases, the sum claimed shall be fixed by a committee of six members, three to be appointed by each of the contracting parties.

ART. 8. Peru shall pay to Spain an indemnification of 8,000,000 pesos, to cover the expenses incurred by Spain since the refusal of Peru to treat with Spain about the conclusion of peace.

The Peruvian Government approved and published the arrangement which had been concluded on the 2d of February. The next day the mutual salute of the Spanish and Peruvian flags took place, and a Spanish ship departed for the islands, to put them in the hands of the authorities named for that purpose by the Peruvian Government. On February 5th, a part of the

* See ANNUAL CYCLOPEDIA for 1864, p. 633.

Spanish crews landed at Callao, with the object of refreshing themselves, and some struggle ensued between them and the people. An exaggerated account of these events produced some excitement in Lima, which soon abated, however, and tranquillity was restored. Nevertheless, some rumors of a conspiracy were afloat, and even some imprisonments took place, the most important of which was that of the ex-President Don Ramon Castilla. The members of the South American Congress, which had been assembled in Lima after the middle of November, 1864, declared that the restoration of the Chincha Islands to Peru, satisfied the chief interest which their Governments had in the conflict.

It was soon found that there was a great deal of dissatisfaction with the conduct of the Government in all parts of the republic. On February 28th, a revolution broke out in the Southern portion of Peru. The Governor of Arequipa, Colonel J. M. Prado, made a *pronunciamiento*, declaring that the President, by concluding peace with Spain, had made himself unworthy of being any longer the chief of the republic. All the cities and towns of the four departments of Arequipa, Moquegua, Puno, and Cuzco declared for a change of Government. General Bustamante was appointed commander of the forces. New prefects of the provinces and cities were nominated. Perfect order was maintained, and there was no interference with trade. In Lima Vice-President Canseco was suspected of favoring the movement, and sought refuge at the Legation of the United States. This circumstance led to some difficulty between the United States minister and the Peruvian Governor, but the matter was compromised by Gen. Canseco being requested to leave, and in consideration of his going out of the country the Government was reported to have given him fifteen thousand dollars. Soon the revolutionary movement spread in the northern provinces also. Mass meetings were held which declared President Pezet a traitor, and called on Vice-President Canseco to assume the reins of the Government. Col. A. Noya was elected commander of the revolutionary forces of the North.

On May 8th, the Government forces expelled the revolutionists from the town of Arica. In consequence of this loss, the revolutionists retired from the coast, but only in order to re-enforce the strong body of troops with which Gen. Prado was marching upon Lima. To prevent communications coastwise, as also to prohibit supplies from Bolivia or Chili to Col. Prado, the Government declared the ports of Islay and Quilca blockaded, and official intimation of this was made to the representatives of the different Governments in Lima. Subsequently, the port of Pisco was included in the blockade.

On the night of June 24th a mutiny broke out on board the Amazonas, the flag-ship, whilst blockading the port of Arica, resulting in the death of Admiral Panizo and other officers, and

the capture of the ship by the mutineers. The Amazonas afterwards proceeded to Pisco, where the sloop-of-war America, lately brought from Europe, was at anchor, and signaled to the captain to come on board, which he did, and was immediately made prisoner. The America was then ordered to surrender, which was done, the crew yielding without the least resistance. A small steamer, the Tumbes, which was cruising off Islay, was also captured by the rebels.

On July 5th a fight took place about six miles from Lima, between 12,000 revolutionists and 6,000 Government troops. The former suffered a severe loss, but on the next day, July 6th, they appeared before the gates of Lima, and met with little resistance till they reached the principal Plaza, where the palace was held by the troop of Celadores, who fought till all were shot. The palace was fired, and narrowly escaped destruction. The Minister of War, Col. Cuba, who was in charge of Fort Santa Catalina, surrendered on the 7th. Gen. Pezet fled on board the British war-steamer Shearwater in Callao Bay, and Gen. Canseco assumed the Presidency. The whole country, without delay, adhered to the new Government. At Callao, the second town of the republic, Gen. Rivas abandoned his post during the night, leaving the town without protection. This led to grave disorders. An excited mob divided itself into bands and robbed and plundered during the night. Every principal store or shop stood open and empty, having been completely gutted. All property not removable was smashed to pieces. The new Government being known to be entirely anti-Spanish, a large number of Spanish residents at Lima deemed it safest to take refuge on board the Spanish iron-clad Numancia.

Gen. Canseco removed the friends of the fallen President from all public offices, supplanting them by leading members of the revolutionary party. The ex-President was branded as a "traitor and assassin," and a note was passed to the British Chargé d'Affaires in Lima, to request his being given up from under the British flag, that he might be brought to condign punishment. The British vessel, however, which had the ex-President on board, had sailed the evening before the note was despatched.

Peace seemed to be fully restored, but the rule of Canseco, nevertheless, lasted only until November 26th. On that day a public meeting was held at Lima, for the consideration of the state of the country and the state of the Spanish question. The result of this meeting was that Gen. Prado, the revolutionary general, was declared "Dictator," for the salvation of the national honor. The leading men of the revolution pledged themselves to him, as also a large number of citizens, placing the country under his entire charge, with the sole condition that, as soon as possible, he would call together a Congress. The new change in the Government was adopted

by the entire nation without a show of resistance. A solitary attempt, made in Arequipa, to bring about a rising in favor of President Pezet, was easily suppressed. The Dictator inaugurated his administration by a series of wise and vigorous measures, which secured to him a more than ordinary confidence on the part of the population. He ordered a thorough investigation into the public treasury; taxes were levied on the produce of the country exported; silver, cotton, sugar, rice, tobacco, and salt-petre, being charged three per cent. *ad valorem* duty; forty cents per arroba on brandy, and fifty cents per gallon on rum. In order to make up the deficiency and to prevent an entire dependence upon the transient revenue of the guano trade, a general abolition of all privileges and pecuniary grants unlawfully accorded by former governments was decreed and carried into execution. Several bureaus and all unnecessary offices were suppressed. A central court of justice was appointed for the speedy trial and punishment of all persons belonging to the public service who might be guilty of treason, dishonesty in the discharge of their duties, or other crimes. Public schools were decreed, for the diffusion of education among the poorer classes.

The Government of Gen. Prado assumed at once a determined attitude with regard to Spain. Several vessels were detained in Callao, on suspicion that they were carrying provisions and implements of war to the Spaniards, and the attitude of the Government left no doubt that it would repudiate the treaty of January, and closely ally itself with Chili.

On December 5th the negotiations which the new Government of Peru had, immediately after its installation, entered into with Chili, terminated in the conclusion of an offensive and defensive alliance. It was agreed between Señor Pacheco, the Peruvian, and Señor Santa Maria, the Chilean commissioner, that the affair should not be made public until ratified by the Chilean Congress. The latter body lost no time in ratifying and approving the treaty (December 30th), and consequently war was proclaimed by Peru against Spain on the 14th of January, 1866.

The Dictator announced the important decree to the nation by the following decree:

Mariano Ignacio Prado, Provisional Supreme Chief of the Republic.

In consideration, That Peru, independently from the special reasons which she has for demanding from the Government of Spain the reparation of grave offences which the latter has inflicted on her, has been obliged to consider, and considers as her own, the question which the latter Government has raised against Chili; and that in consequence thereof a treaty of alliance, offensive and defensive, has been signed, approved, and ratified between both Republics, with the object of saving each other mutually, and also America, from the unjust violent aggressions of Spain; I decree:

ART. 1. The Republic is declared to be in a state of war with the Government of Spain.

ART. 2. The Secretary of Foreign Relations will take care to communicate this declaration to all

friendly nations, with a corresponding manifest of reasons which have caused the same.

The Secretaries of State, each one in the Department that belongs to him, are charged with the execution of this decree and with the publication of the same with due solemnity.

Given at the Government House in Lima, the 14th of January, 1866. MARIANO I. PRADO.

The sum and substance of the treaty between Peru and Chili was as follows:

In the name of the Almighty God: The Republics of Peru and Chili, in view of the danger which threatens America, and of the violent aggression and unjust pretensions with which the Spanish Government has commenced to attack the dignity and sovereignty of both, have resolved to conclude a Treaty of Alliance, offensive and defensive, to which effect they have appointed as Plenipotentiaries *ad hoc*, on the part of Peru, the Secretary of Foreign Relations, D. Toribio Pacheco, and on the part of Chili, Sr. D. Domingo Santa Maria, who, after having found their respective Powers to be in due order, have proceeded to stipulate the following preliminary treaty:

ART. 1. The Republics of Peru and Chili form between them the closest offensive and defensive alliance for the purpose of repelling the actual aggression of the Spanish Government, as well as any other of the same Government, which has its object on attacking the independence, sovereignty, or democratic institutions of both republics, or of any other on the South American continent, or which originates in unjust claims that have been declared as such by both nations, are not made according to the principles of International Law, nor decided in the way this same law prescribes.

ART. 2. For the present, and by this Treaty, the Republics of Peru and Chili bind themselves to unite the naval forces which they have, or in future may have disposable, in order to attack with the same the Spanish maritime forces that are or may be found on the waters of the Pacific, blockading, as is actually the case, either the ports of one, or, as may happen, those of both of the above-mentioned Republics, or committing any other hostilities against Peru and Chili.

ART. 3. The naval forces of both Republics, may they be operating jointly or separately, as long as the present war lasts, which has been provoked by the Spanish Government, shall obey the government of that of the two Republics in whose waters said naval forces may be.

The officer of the highest rank, or in case there should be many of the same rank, the oldest one among them, who is in command of either of the combined squadrons, shall take the supreme command of both whenever said squadrons operate jointly.

The Government of both republics, however, shall be able to confer, by mutual agreement, the command of the squadrons, when they operate combinedly, on such native or foreign officer whom they may consider most competent.

ART. 4. Either one of the contracting Republics in whose waters the combined naval forces may be because of the actual war with the Spanish Government, shall pay all expenses of any kind whatever which the supplies of the squadron, or of one or more of the vessels thereof, may make necessary; but at the end of the war, both Republics shall appoint two commissioners, one for each party, who shall make a definitive settlement of the expenses incurred and duly proved, and shall charge to the account of each of the two one-half of the total sum that these expenses may amount to.

In the settlement of the partial expenses which each of the Republics may have paid for the supply of the squadron, or of one or more of its vessels, shall be taken account of and credited in her favor.

ART. 5. Both contracting parties bind themselves

to invite the other American nations to give their adherence to the present treaty.

ART. 6. The present treaty shall be ratified by the Governments of both Republics, and the ratifications exchanged in Lima within the term of forty days, or before if possible.

In witness whereof, the Plenipotentiaries of both Republics sign and seal the present treaty.

Dated in Lima, the fifth of December, one thousand eight hundred and sixty-five.

D. PACHECA.

DOMINGO SANTA MARIA.

The promulgation of the order to prepare for war was received by the Peruvians with great enthusiasm. The naval squadron left at once to join the Chilean vessels. The combined squadron would consist of the following men-of-war: *Peruvian*—Appurimac, 60 guns (flag-ship), Amazonas,* 44 guns; America, 10 guns; Union, 10 guns. *Chilian*—Esmeralda, 32 guns; Mais-su, 8 guns; and Covodonga, 3 guns; making a total of 7 vessels, mounting together 167 rifled guns of heavy calibre.

PETROLEUM. The production of petroleum has been constant during the year, but not so large in quantity as had been anticipated. But the knowledge of the subject has increased, and the skill required in the extraction of the oil from the earth. The capital invested in the business was considerably above the amount needed, and some of it has received a poor return. The unusual success of the previous year had stimulated speculation, and led to the formation of eleven hundred companies, with an aggregate capital of six hundred million dollars. Of this amount of capital, probably not more than fifteen per cent., or ninety millions of dollars, was paid up, and a part of this was appropriated to the purchase of land. The total amount taken for consumption at New York and exported from New York, Boston, Philadelphia, etc., for the last three years, was as follows:

	1863.	1864.	1865.
Exported from New York, bbls..	438,690	568,894	877,163
Taken for consumption.....	814,481	943,187	941,161
Total New York.....	908,171	1,175,581	1,618,328
Boston exported.....	51,285	42,807	87,867
Philadelphia.....	184,898	194,008	807,678
Baltimore.....	22,896	28,949	25,608
Portland and elsewhere.....	8,562	1,769	8,737
Total, bbls.....	1,020,747	1,086,915	998,203

Thus the total export for the year was about 750,000 barrels. If this is regarded as about forty-seven per cent. of the total production, which is more than the usual average, it would make that production 1,500,000 barrels. The estimate of the Commissioners of Internal Revenue made the production about twelve thousand barrels daily.

In the commercial aspect, which is the only view taken to this time, the production, especially from wells yielding small quantities, has been much reduced in consequence of the

Federal tax, which has been so large as to render the working of these wells unprofitable.

The exports in detail from New York for the last four years, and the totals from the other ports of the country, have been as follows:

Export of Crude and Refined (including Naptha, etc.), from New York, for the years 1862 to 1865.

* Before a junction was effected, the Amazonas foundered, and was lost.

PETTIGREW, THOMAS J., M. D., an English medical writer, archæologist, and bibliographer, for many years librarian to the Duke of Sussex, born in 1794, died at South Kensington, London, November 23, 1865. In early life, after attaining his medical degree, he had served as a surgeon in the navy, in Nelson's squadron, and subsequently settled in practice in the vicinity of London; but being offered by the Duke of Sussex, whose physician he was, the post of librarian of his noble collection of books, he accepted it, still retaining his position as physician in ordinary to the duke. He devoted himself zealously to literature and bibliography in his new situation, publishing a "Life of Lord Nelson," "Memoirs of Eminent Physicians and Surgeons," and several other biographical works of great merit. He next turned his attention to archæology, and besides numerous papers on Oriental antiquities, published a curious volume on Egyptian mummies. Meantime he was not only faithful to the interests of his noble employer, in his duties as librarian, but expended much time and care in the compilation and perfection of that monument of patient industry, the "Bibliotheca Sussexiana," an admirable *catalogue raisonnée*, of a very extensive and remarkable collection of books, in three large octavo volumes. Since the death of his patron he had resided in South Kensington, and devoted himself exclusively to literary pursuits. He was a member of numerous learned societies, and a student of patient and indefatigable research.

PFANDER, CARL GOTTLIEB, D. D., an English missionary and author, born in Wurtemberg in 1803, died at Richmond, near London, December, 1865. He was educated for the missionary work in the Missionary Institution at Basle, Switzerland, during the years 1821-1825, when he was sent by the Evangelical Missionary Society of Basle to Russian Armenia, where he settled in the town of Shusha, and, with the aid of several able associates, undertook to introduce evangelical Christianity among the Armenians and Tartars. In 1828 their missionary work was expressly sanctioned by an imperial order for the countries between the Caspian and the Black Seas. In 1829-1831 he made a long missionary tour, in company with an English physician, Dr. Graves, through Persia, visiting Bagdad, and distributing many Bibles and tracts. In 1835 an imperial ukase put an end to all evangelical missionary labor throughout Russia; in consequence of this order all the Basle missionaries left Shusha and Shamakhy. It is well known, however, that these early labors are now producing a rich reward. There is a large number of evangelical Armenians on the borders of the Caspian Sea. In 1838 Dr. Pfander went to India, still in connection with the Basle Society. In 1840 he joined the "Church Missionary Society," and was sent to Agra, where he labored particularly for the Mohammedans. Several of them were converted through his labors and writings. Challenged by Mohammedans, he had frequent-

ly to consent to public disputations with their champions on the subject of religion. That his work among the Mohammedans was appreciated is shown by the fact that the friends of missions in India interested themselves in that work, and induced the Religious Tract Society of London to publish his controversial works in Persian and Hindustani. His two chief works are "The Balance of Truth," and "The Way of Life." He also wrote a treatise on the Trinity, and a reply to a Turkish book written against the "Balance of Truth." These writings are now published in Persian, Hindustani, Turkish, and Arabic, so that they reach the four great strongholds of Mohammedanism in the world, Persia, India, Turkey, and Arabia. The most important of all his works is the "Mizan-ul-Hakk," or "Balance of Truth," "a defence of Christianity against the objections of the Mussulmans, and an inquiry into and refutation of the claims of Mahometanism." In 1858, at the request of the Church Missionary Society, Dr. Pfander left India and took up his residence in Constantinople, where he continued to reside until just before his death.

PHILLIPS, WILLIAM WIRT, D. D., a Presbyterian clergyman, born in Montgomery County, N. Y., September 23, 1796; died in New York City, March 20, 1865. From his early childhood he was of a thoughtful and religious turn of mind; and after his graduation at Union College in 1815, he entered the Theological Seminary of the Associate Reformed Church, New York, and subsequently the Theological Seminary of the Reformed Dutch Church at New Brunswick, N. J. After prosecuting a full course of study he was, in April, 1818, ordained as pastor of the Presbyterian church in Pearl Street, New York, now merged in the Central church, Broome Street. Here he continued a most acceptable and useful ministry for eight years, when he was transferred to the First Presbyterian church, then worshipping in Wall Street, but afterwards removed to Fifth Avenue, where he exercised his pastoral office until his death—his whole ministerial life occupying a period of forty-seven years.

While as a pastor he devoted himself to the edification of his especial charge, he was called to the performance of other public trusts, to the duties of which he attended with great fidelity and skill. He was a trustee of the College of New Jersey, Princeton, and both a trustee and director of the Theological Seminary at Princeton, and President of the latter Board. He was also a member of the Council of the New York University. Besides being repeatedly elected a member of the several other Boards of the Presbyterian Church, he was, from its organization in 1837, the chairman of the executive committee of the Board of Foreign Missions, and for several years past President of the Board. Making himself thoroughly familiar with its operations, the condition of its missions, and the name, character, and work of every missionary, he showed himself an

earnest and sagacious friend and promoter of that cause. He was frequently a member of the General Assembly, and in 1835 was its moderator. By the terms of their respective foundations he was *ex officio* a trustee of the Leake and Watts' Orphan Asylum, and of the Sailors' Snug Harbor, posts requiring no little time and labor. The degree of Doctor of Divinity was conferred upon Mr. Phillips by Columbia College while he was yet under thirty years of age.

POLAND. (*See* RUSSIA.)

PORTUGAL, a kingdom in Europe. Present King, Luis I., born October 31, 1838; succeeded his brother, King Pedro V., November 11, 1861. According to the Constitution ("carta de Ley") of April 29, 1826 (amended 1852), there are two Legislative Chambers, the Chamber of Peers and Chamber of Deputies. The former consisted, in 1865, of 115 members, named for life by the sovereign, hereditary membership having been abolished by the law of May 27, 1864. The Chamber of Deputies consists of 154 Deputies for continental Portugal, and 25 for Madeira and the Azores. The members are chosen in direct election, by all citizens possessing a clear annual income of at least 133 milreis, while the Deputies must have an income of at least 390 milreis. A new ministry was appointed on September 3, 1865, consisting of the following members: Antonio de Aguiar (Interior); Viscount de Castro (Foreign Affairs); Count Flores Novas (War); Bargaona Freitas (Justice and Ecclesiastical Affairs); Yontes (Finance); Viscount Praia Grande (Marine and Colonies); Serpo Pimentel (Commerce and Public Works). The Roman Catholic faith is the State religion; but all other forms of worship are tolerated. The number of Protestants, mostly foreigners, does not exceed 500. They have chapels in Lisbon and Oporto. The revenue was estimated in the budget for 1865-1866 at 20,732,357, and the expenditures at 21,021,480 milreis. There has been no budget for the last thirty years without a deficit. The total public debt (interior and exterior) amounted on June 30, 1864, to 185,117,511 milreis. The army numbered on June 30, 1865, 1,409 officers, 18,981 men, 2,115 horses, and 36 guns in the kingdom, and 10,236 men, with 13,834 reserve troops in the colonies. The navy, in 1865, was composed of 35 vessels, armed with 355 guns.

Portugal was formerly divided into the seven provinces of Minho, Tras-os-Montes, Upper Beira, Lower Beira, Estremadura, Alentejo, Algarve; and this division is still in common use, although it was officially supplanted in 1835 by a division into administrative districts. The kingdom proper embraces 36,510 square miles, and in 1863 3,987,861 inhabitants; to which must be added the Azores and Madeira, with 1,032 square miles, and 362,105 inhabitants. Total population of the kingdom and the isles, 4,349,966 (in 1861, 4,035,330). The population of the colonial possessions was as follows:

1. POSSESSIONS IN ASIA:	
Indian Settlements, Goa, Salceta, Bardes, etc.	363,736
Damao and Diu	44,593
Indian Archipelago	550,900
Macao	29,567
Total	1,258,433
2. POSSESSIONS IN AFRICA:	
Cape Verde Islands (fourteen, of which seven are inhabited)	35,460
Settlements in Senegambia	1,065
Islands of St. Thomas and Principe	12,250
Angola, Benguela, and Mossamides	2,000,600
Territory of Mozambique	300,000
Total	2,298,745
Total of Portuguese Colonies	3,657,238

The capital, Lisbon, has a population of 224,063 inhabitants; and Oporto 86,257 inhabitants.

The movement of commerce in 1861 was as follows: Imports, 26,634,919; exports, 14,833,187 milreis.

The movement of shipping in the same year was as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Portuguese	6,734	451,048	6,677	430,630
Foreign	3,257	623,196	3,454	733,237
Total	9,991	1,069,244	10,131	1,153,867

On March 27th the batteries of the fort of Belem fired upon the American war-vessels Niagara and Sacramento, stationed at the mouth of the Tajo, because, in the opinion of the governor of the fort, they had violated the laws of neutrality. The American envoy, on April 7th, demanded as satisfaction that the governor of Belem be deposed and the American flag be saluted. The Portuguese Government granted both these demands.

The Chamber of Deputies which was elected in 1864 was dissolved in May, after a session of four months and a half. A new Chamber was elected in July, in which the ministry had a small majority. The Cortes were opened by the King on July 30th with a brief speech. The King stated that the mediation of Portugal between England and Brazil had produced a happy result. The financial condition of the country was satisfactory. Laws would be presented by the ministry relative to the Douro wine trade and the importation of cereals. The King also announced that a rigid law would shortly be brought forward for the final abolition of slavery in the Portuguese possessions. On August 25th, the candidate of the ministry was elected President of the Chamber of Deputies by 85 to 74 votes; but on August 29, the ministry (Sa da Bandeira) were defeated and resigned. On September 3d, the new ministry mentioned above was formed. Both the old and the new ministry belong to the Liberal party. The new represent a coalition between the Liberal majority of the Chamber of 1864 and the Progressista Opposition called Regenerators.

POTTER ALONZO, D. D., LL. D., an Episcopal clergyman and author, Bishop of the Protestant Episcopal Church for the Diocese of Pennsylvania, born in Beekman (now La Grange), Dutchess County, New York, July 10, 1800; died in San Francisco, California, July 4, 1865. His ancestors were among the early settlers of Portsmouth, Rhode Island, and his parents had removed to Dutchess County but a few years previous to his birth. He received his early school education at Poughkeepsie, under the tuition of the celebrated Daniel H. Barnes, and entered Union College, where he graduated in 1818 with the highest honors of his class, though one of its youngest members. In 1819 he was appointed tutor in Union College, and in 1821 elected Professor of Mathematics and Natural Philosophy. He had united with St. Peter's Protestant Episcopal Church in Philadelphia soon after his graduation, and having turned his attention to theology, was ordained deacon in 1821, and priest in 1824. In 1825 the corporation of Geneva (now Hobart) College elected him President of that institution, but he declined the honor. In 1826 he was called to the rectorship of St. Paul's Church, Boston, where he remained till 1831, and was successful in bringing the church up from a condition of almost hopeless depression to a commanding and influential position in the city. In 1831 he was recalled to Union College as Vice-President and Professor of Moral Philosophy. He had married the only daughter of President Nott, and that able educator, who appreciated his rare abilities, desired, after his nearly thirty years of severe labor as a college President, a vigorous and accomplished collaborator on whom he might devolve a portion of his own multifarious duties. For fourteen years Professor Potter filled this responsible position with great acceptance, winning with each year new honors, for his zealous and efficient labors in the promotion of education, not simply within the college walls, but in the wider sphere of the common schools, in the training of the Normal schools, and the elevating and ennobling influences of the Lowell Institute Lectures. In September, 1845, he was elected Bishop of the Diocese of Pennsylvania, and though he had twice previously declined the Episcopal dignity, he now, though with unfeigned reluctance, accepted it, relinquishing with sorrow his relations to the College in which more than half of his life had been passed, twenty-one years of it as an instructor, greatly to the grief of the friends of the institution, who had come to hope that in him they were to have an able successor to the learned and efficient President who for so many years had been at its head. Professor Potter's last official act in connection with the college was the delivery of an eloquent oration on its semi-centennial anniversary, July 22, 1845. Henceforth, though with scarcely abated zeal in the promotion of education in its widest sense, Bishop Potter devoted his best energies to the

performance of the duties connected with the Episcopal office. His labors were arduous and manifold; his diocese was large and the care of it engrossing, and there came upon him, in addition to the ordinary duties of the episcopate, other questions of rubric and ritual, of parochial and ministerial differences, of harmonizing opposing classes and interests, and of training and drawing out his clergy for the great works of religious philanthropy to which he sought to subsidize them. In all particulars he was a model Christian bishop, grave and dignified as became his holy office, yet genial and kindly in manner, his heart full of the largest charities, and ever ready to lend a helping hand to every good work. He had especially identified himself with two great enterprises in his diocese, the organization of the Hospital of the Protestant Episcopal Church, one of the largest and most admirably conducted hospitals in the country, and the establishment of the Divinity School of the Church, in Philadelphia, which, through his exertions, was liberally endowed and provided with an able faculty and all the best appliances for theological instruction. His zeal for education was manifest in his efforts for the improvement of the common school system of Pennsylvania, his promotion of measures of special education, and his exertions for the establishment of the school for the feeble-minded, now in successful operation at Media, and of whose board he was president till his death.

In the midst of his abundant labors—labors too severe for even his vigorous constitution and stalwart frame, he was smitten in 1858 with paralysis, and for a time withdrew from his sphere of duty. By the advice of his physicians he spent a year in Europe, trying, but without apparent benefit, the water-cure at Great Malvern, and subsequently, after a short visit to London and Oxford, spending the winter at Pau, and the spring in Italy. The outbreak of the Italian war, in the summer of 1859, compelled his return to the United States, and he came home with his health partially though not fully restored. The years that followed were years of untiring and intense labor. The organization of the Divinity School, to which we have already alluded, and of the school for the feeble-minded, in addition to the ordinary duties of the Episcopate, in a time when men's minds were unsettled, and the nation was on the eve of great events, as well as the cares and responsibilities thrown upon him by his commanding position in the House of Bishops, might well have tasked all his energies. When the war commenced, he at once took strong ground in behalf of the constituted authorities, and throughout the entire struggle his support was ardent and glowing. An active and efficient member of the Christian Commission, a zealous and earnest friend of emancipation, finding time amid his multifarious duties to visit almost daily the Government hospitals and present the truths and consolations of the gospel to the wounded and dying, he set a

noble example to the clergy of his diocese, of enlightened patriotism and fidelity to his country's cause; and though under the pressure of these multiplied labors his health again began to fail, he would not give up till the war was over—then, finding his vital powers exhausted, he consented early in June to sail for California, in the hope that the voyage and the fine climate of the Pacific coast might once more restore his health. It was not so to be. On the night of the 26th of June, while passing up the Pacific, off the coast of Lower California, he was taken seriously ill, and on the 29th his disease assumed an alarming aspect. On the 1st of July the steamer reached San Francisco, but he was too ill to leave his cabin, and a physician who was called in, after some hesitation, pronounced the disease malignant Panama fever. He was unconscious from Saturday, July 1st, except for a few minutes, until his death, which occurred on the morning of the 4th of July. Bishop Potter received the degree of D. D. from Harvard and Gambier Colleges, and that of LL. D. from Union College. He was the author of a number of works of great merit, and left others unpublished, which would have established his reputation as a philosopher and theologian. Among his published works are "The Principles of Science applied to the Domestic and Mechanic Arts," etc. (12mo, New York, 1841); "Political Economy, its Objects, Uses, and Principles Considered" (18mo, 1841); "Hand-Book for Readers and Students" (18mo, 1847); "Discourses, Charges, and Addresses," etc. (12mo, Philadelphia, 1858); "The Drinking Usages of Society," a Series of Lectures on Temperance; and in conjunction with George B. Emerson, of Boston, a volume entitled "The School and the School Master," a work of which about sixty thousand copies were circulated, thirteen thousand of them by Hon. James Wadsworth. He delivered, in 1845-1853, five courses of lectures, or sixty lectures in all, before the Lowell Institute of Boston, on subjects connected with natural theology, lectures which attracted marked attention, even among the very remarkable courses of lectures delivered before that Institute, for their profound philosophy, their complete mastery of the questions of psychology and ethics involved, and for their glowing and brilliant eloquence. They are, we believe, to be published.

PRESBYTERIANS. The statistics of the (Old School) Presbyterian Church were reported in May, 1865, as follows: Synods, 85; presbyteries, 185; ministers, 2,801; churches, 2,629; members added on examination, 10,540; members added on certificate, 8,816; communicants reported, 282,450; adults baptized, 2,821; infants baptized, 9,692; contributed for domestic missions, \$105,383; foreign missions, \$179,712; education, \$117,814; publication, \$81,121; church extension (or building), \$55,814; disabled ministers, \$22,363; congregational, \$1,939,566.

The seventy-seventh General Assembly of

the Presbyterian Church in the United States (Old School) began its annual session in Pittsburgh on May 18th. Of the presbyteries in the late Confederate States only one, that of Nashville, was represented. The relation of the General Assembly to the Southern presbyteries, which had organized the "General Assembly of the Presbyterian Church in the Confederate States," called forth an animated debate. A committee was appointed to consider a memorial, asking the General Assembly to drop from its rolls the names of ministers, elders, presbyteries, and synods who had given their adhesion to the General Assembly of the Confederate States. The report of the committee was to the effect that "the act of rebellion, to support the institution of slavery, was not only a great sin, but wholly unwarranted." The committee recommended, however, kind treatment of those who created this schism in the Church, and in case of a sufficient number of loyal members being found in any community, they recommended the formation of churches, and the organization of presbyteries and synods. The report was adopted. The Assembly also resolved, with but few negative votes, "That no missionaries be appointed by the Board except those giving satisfactory evidence of loyalty to the national Government, and of cordial sympathy with the Presbyterian Church in her testimony on doctrine, loyalty, and freedom." The two committees (Eastern and Western) on the education of the freedmen, reported that they had pursued their work vigorously and successfully. Their aggregate receipts had been nearly \$12,000. Between thirty and forty teachers, male and female, had been in the field.

In reviewing the records of the Synod of Kentucky, which had censured the action of the previous Assembly against slavery, the General Assembly recorded its disapproval of that censure, and took this further exception to the Synodical records: "That the Synod has wholly failed to make any deliverance during the past year calculated to sustain and encourage our Government in its efforts to suppress a most extensive, wanton, and wicked rebellion." The Assembly, as in the preceding years, exchanged interdenominational courtesies with the New School Presbyterian General Assembly, without, however, taking any further steps in favor of a union. A large committee, located at important points throughout the Union, was appointed "to act in concert with other committees similarly appointed by other evangelical denominations, for the purpose of giving expression to our desire for more visible fellowship, and for securing a more vigorous co-operation in the defence of Protestant Christianity, as against the encroachment of Roman Catholicism and infidelity in our land."

The resolutions passed by the General Assembly concerning slavery, the late war, and the relation of the Church to the Southern presbyteries, were received with great dissatisfaction

by the majority of the Presbyterian ministers in Kentucky and Missouri. A document was drawn up, called a "Declaration and Testimony," in which the action of the General Assemblies, since 1861, on the above subjects, is designated as an apostasy from the true spirit of Christianity, and a determination expressed to call a convention of all opponents of that action for the purpose of concerting further measures.

This document, which produced a great excitement in the Church, received the signatures of sixty persons, ministers and ruling elders, in the State of Missouri, and thirty-three persons, ministers and elders in other synods, chiefly in Kentucky, and was formally adopted by the Presbytery of Louisville. At the meeting of the Synod of Kentucky, the Rev. Dr. Robert Breckinridge offered the following resolution:

Resolved, That this Synod adjudges that the action of the majority of the Louisville Presbytery, by endorsing and adopting a paper styled the "Declaration and Testimony," assumed such a state of open rebellion against the Church, and open contempt and defiance of her scriptural authority, and contempt of her faith, order, and acts, as to render each and every one of them unqualified, unfit, and incompetent to sit and act as a member of this or any other court of the Presbyterian Church.

After several days' discussion, the Synod rejected the resolution of Dr. Breckinridge, by a vote of 102 against 25—non-committal, 7. By the rejection of this resolution, the Synod did, however, not intend to endorse the action of the Louisville Presbytery; but on the contrary, it expressed its disapprobation of it by adopting the following resolution:

Resolved, That the Synod having caused a certain paper, styled the "Declaration and Testimony," lately adopted by the Presbytery of Louisville, to be read in its hearing, and having carefully considered the same, hereby expresses its disapprobation of the terms of this paper, and of its spirit and intent, indicated on its face, as looking to the further agitation of the Church, if not its division, at a time when great mutual forbearance is called for among brethren, to the end that we may have quietness and repose. Whereupon the Synod enjoins on the Presbytery of Louisville in particular, and upon all the presbyteries and churches, ministers and people, subject to it in the Lord, to forbear whatever tends to disturbance and alienation, beseeching, in the name of our Lord Jesus Christ, that "they all speak the same thing, and that there be no division among them, but that they be perfectly joined together in the same mind and in the same judgment."

The Synod defined its position to the General Assembly by adopting (by a vote of 48 to 52) a paper which is substantially as follows:

1. The acts of the last Assembly on overtures Nos. 6 and 7, and resolution No. 4 on the reports of the Committee of the Board of Domestic Missions, are condemned as unwise, unconstitutional, and unscriptural, and it is hoped the Assembly will review and correct them. 2. Yet none of the acts of the Assembly during the years 1861 to 1865, inclusive, justify a withdrawal from that body, and the Synod will adhere with unbroken purpose to the Presbyterian Church of the United States, and will oppose every effort to produce schism. 3. The Synod disapproves of the "Declaration and Testimony" adopted by the Presbytery of Louisville, and enjoins upon that Presbytery to forbear what tends to disturbance.

VOL. V.—45

4. All under the Synod's care are urged to study the things which make for peace.

A similar paper was adopted by the Synod of Missouri.

The statistics of the New School Presbyterian Assembly were, in 1865, as follows: Synods, 23; presbyteries, 108; ministers, 1,694; churches, 1,479; communicants, 143,645; Sunday-school membership, 112,781; contributions for home missions, \$94,507; for foreign missions, \$112,296; for education, \$36,952; for publication, \$46,325; congregational funds, \$1,264,667; miscellaneous contributions, \$501,141.

The New School Presbyterian General Assembly met at Brooklyn, N. Y., on May 18th. The composition of the Assembly presented several novel features. Of the presbyteries which seceded in 1857, and organized the "United Synod," two (Union and Kingston), both in East Tennessee, had pronounced in favor of a return to their old connection, and their delegates were present on the opening of the Assembly. The Assembly, in addition, reconstituted a third of the East Tennessee presbyteries (Holston), and erected these three presbyteries into the "Synod of Tennessee." Moreover, for the first time in the history of this Assembly, it counted among its members representatives of the colored race, two negroes having been chosen commissioners, one from Philadelphia and one from Newark. The Assembly resolved to place, for the present, in a state of probation ministers of the Church from the South who have supported the Confederacy. A resolution was adopted authorizing the Assembly to send ten ministers to East Tennessee to explore the field and see how the work of reunion might be promoted. The Assembly also unanimously adopted a report on the state of the country, which expressed grief at the assassination of President Lincoln, confidence in President Johnson, joy at the end of the war, and a hope that the Africans would be no longer excluded from the rights and privileges of freemen.

The United Presbyterian Church was, in 1865, composed of 7 synods, divided into 46 presbyteries, with 8 Missionary Presbyteries additional (Sealcote, Egypt, and Oregon), being 49 presbyteries altogether. There were in the Church 384 settled pastors, 132 ministers without charge, being a total of 516 ordained ministers, 50 licentiates, and 46 students of theology, 659 congregations, with 24,921 families, and a membership of 58,265. The Church had an increase during the year, by examination and profession of faith, of 2,725, and by certificate 2,908, with a decrease by death of 1,055, and by removal of 3,865, being a total increase of 1,218. There were 4,521 children baptized by her ministry, and 281 adults. Her contributions to the Boards of the Church were not fully reported. The amount contributed to home missions, as reported, was \$19,722; foreign missions, 42,722; education, \$1,768; publication, \$2,869; church extension, \$11,796.

Assembly's fund, \$679; salaries of pastors, \$258,000; other funds about \$180,000; the whole amount contributed for all purposes, as far as reported, being over \$500,000. The General Assembly made appropriations to the various Boards of the Church, to carry on their operations during the coming year, the sum of \$177,400, divided as follows: foreign missions, \$86,800; home missions, \$38,000; freedmen's missions, \$2,200; church extension, \$20,000; education, \$10,000; publication, \$5,000; Assembly's fund, \$600.

The thirty-fifth session of the General Assembly of the Cumberland Presbyterian Church met at Evansville, Ind., and elected the Rev. Mr. Douglas, of Tennessee, moderator. The Assembly adopted resolutions expressing their abhorrence of the assassination of President Lincoln. The views expressed by the former General Assemblies on slavery and loyalty were confirmed. Of the presbyteries within the bounds of the late Confederate States, only those constituting the Synod of East Tennessee were present. In November, a convention of Cumberland Presbyterians, consisting chiefly of members of the Southern presbyteries, was held at Memphis, to express their views on the unity of the Church, and on the views of the last General Assembly. In accordance with the spirit generally pervading the Southern Churches, it was resolved that "the whole proceedings of the Assemblies of 1863 and 1864, touching slavery and the state of the country, and so far as the same were endorsed by the Assembly of 1865, were extra-ecclesiastical, and therefore entirely nugatory;" that in their charges of sin upon the Southern people, "they condemn" what God does not condemn, "and in laying down terms of communion which the Bible does not lay down, they exalt themselves above, and assume to be more holy than God." At the same time, however, the Convention expressed gratification at the continuing unity of the Church, at the existence of a large conservative element in the northern portion of it, and recommended to the presbyteries to send up their full quota of commissioners to the next General Assembly.

The Presbyterians of the late Confederate States were almost unanimous in favor of continuing a separate ecclesiastical organization. The Presbytery of New Orleans, which, after the capture of that city, severed its connection with the General Assembly of the Southern Churches, reunited itself with that body—only the Synod of North Carolina, which was in session toward the close of October at Fayetteville, was unable to agree upon any resolutions concerning reunion, and tabled resolutions condemning the spirit of the Northern churches.

The General Assembly of the Southern Presbyterians met in December at Macon, and elected the Rev. Dr. George Howe, of Columbia, moderator. The Assembly adopted, for the name of their Church, the General Assembly of the Presbyterian Church in the United

States. With regard to the relation to Northern Presbyterians, the General Assembly passed the following resolutions:

Resolved, That our ministers and churches be and hereby are warned against all ministers or other agents who may come among us to sow the seeds of division and strife in the congregations or to create schism in our beloved Zion; and owing to the peculiar reasons for prudence which now exist, we enjoin it upon our ministers and sessions to exercise special caution as to whom they admit to their pulpits, and in cases of doubt to refer to the judgment of the presbyteries the whole question of the nature and extent of the courtesy or countenance they may extend.

Resolved, That the Assembly would remind sessions that in no case is it proper for them to invite ministers of other denominations steadily to occupy any of our pulpits without the consent of the presbyteries, and the known purpose of such ministers, at the earliest suitable opportunity, to unite with us in ecclesiastical relations.

The following testimony concerning slavery was adopted:

This relation is now overthrown—suddenly, violently—whether justly or unjustly, in wrath or in mercy, for weal or for woe, let history and the Judge of all the earth decide. But there are two considerations of vital interest which still remain.

One is, that while the existence of slavery may, in its civil aspects, be regarded as a civil question, an issue now gone, yet the lawfulness of the relation as a question of social morality and of Scriptural truth has lost nothing of its importance. When we solemnly declare to you, brethren, that the dogma which asserts the inherent sinfulness of this relation is unscriptural and fanatical; that it is condemned, not only by the Word of God, but by the voice of the Church in all ages; that it is one of the most pernicious heresies of modern times; that its countenance by any Church is a just cause of separation from it (1 Tim. vi. 1-5), we have surely said enough to warn you away from this insidious error as from a fatal shore.

Whatever, therefore, we may have to lament before God, either for neglect of duty toward our servants, or for actual wrong while the relation lasted, we are not called, now that it has been abolished, to bow the head in humiliation before men, or to admit that the memory of many of our dear kindred is to be covered with shame, because, like Abraham, Isaac, and Jacob, they had bond-servants born in their own houses, or bought with their money, and who now, redeemed by the same precious blood, sit down together in the kingdom of God.

The report of the Standing Committee on Domestic Missions, specially referred to the duties of the Church toward the negroes. It reminded the Church that this always important branch of Christian labor "has within the last twelve months assumed a magnitude and an urgency which requires a large and instant increase of zeal;" that "while the change in the legal and domestic relations of the colored people does not release the Church from its obligation to seek their moral and spiritual welfare, their greater exposure to temptation, leading to vice, irreligion, and ruin, both temporal and eternal, which result from that change, makes the strongest appeal to our Christian sympathies."

This subject of the religious culture of the blacks was further enforced by the adoption of a report from the Committee on Bills and Overtures. The inquiry of the Overture being

as to "the course to be pursued toward the colored people within our bounds," the preamble sets forth that "the colored people never stood in any other relation to the Church than that of human beings lost with us in the fall of Adam, and redeemed with us by the infinitely meritorious death and sacrifice of Christ, and participants with us in all the benefits and blessings of the Gospel; and that our Churches, pastors, and people have always recognized this claim to Christian equality and brotherhood, and have rejoiced to have them associated in Christian union and communion in the public services and precious sacraments of the sanctuary." And the final resolution speaks of the advantages of the "colored people and the white being united together in the worship of God," though deferring to the wishes of the former as to whether this shall be continued. A "Pastoral Letter" to the Southern Churches sets forth at greater length the views of the Assembly concerning the relation of the Southern Churches to the civil Government, to the war, the negro race, and slavery.

The statistics of this denomination were, in 1865, as follows: Synods, 10; presbyteries, 46; churches, 1,277; ministers, 811; licentiates, 91; candidates, 65; communicants, 83,821. Of these, 12,473 are colored people.

In South America, the (Old School) Presbyterian Church of the United States supports missionaries in the United States of Colombia (at Bogota) and in Brazil. In the latter country, the missionaries, on December 16th, organized themselves into the "Presbytery of Rio de Janeiro." They publish a semi-monthly religious newspaper, called *Imprensa Evangelica* (Evangelical Press).

In Scotland, the Synods of the three great divisions of Presbyterians (Church of Scotland, Free Church of Scotland, and United Presbyterians) met, by an unusual coincidence, at the same time in Edinburgh. The proposed union between the Free Church and the United Presbyterians was again advocated by the great majority of both Assemblies, and the joint committee reported that the Reformed Presbyterian Church and the English Presbyterian Churches had joined in the Conferences, and that so far as the negotiations had gone, they found a general agreement in principle. On one day, the two Assemblies held a joint meeting, presided over by the two moderators alternately. Both Assemblies resolved to reappoint the Union Committee. At the close of the year, Dr. Cairns, one of the leading members of the committee, publicly stated that the final report of the committee on the proposed union of the Free, United Presbyterian, Reformed Presbyterian, and English Presbyterian Churches, would be made, before the meeting of the Church Courts in May, 1866.

The statistics of the United Presbyterian Synod, in 1865, were as follows: Ministers, 580; elders, 4,308; preachers, 102; students of divinity, 133; members, 170,590; average

Sunday attendance, 199,101; congregational income, £178,858; income for missions and benevolence, £50,696; total income, including miscellaneous revenues, £232,316; average contributions of members, £1 6s. 11d. The Finance Committee of the Free Church Assembly reported that the amount contributed during the past year to the public funds of the Church was £358,198 18s. 10d.—being larger than that of the previous year by £15,064 5s.; and the largest sum raised in any year since the year of the disruption.

A Presbyterian bi-monthly paper was, in 1865, established in Bangkok, the capital of the kingdom of Siam, in Farther India. It is printed partly in English and partly in Siamese. The editor is Rev. N. A. Macdonald, a missionary of the American Presbyterian (Old School) Board.

In New South Wales, the union between the Synods of the established Church of Scotland, the Free Church, and the United Presbyterian Church was consummated in November. The different Synods were declared dissolved, and all their members will henceforth be united in the new "Presbyterian Church of New South Wales."

PROUDHON, PIERRE JOSEPH, a French socialist and political writer, born in Besançon, July 15, 1809; died in Paris, January 19, 1865. He was the son of a cooper, and after studying for some time, through the assistance of some benevolent persons, at the college of his native town, he became apprenticed to a printer, and in 1837 was taken into partnership by a printing firm at Besançon. Having devoted much of his leisure to study, and particularly to philosophy, he published the same year an edition of the Bible, with annotations upon the principles of the Hebrew language, and an essay *de grammaire générale*, receiving for the latter a prize from the French Academy, consisting of one thousand five hundred francs, which enabled him to visit Paris, where he spent three years of scientific study. Here he became a contributor to the *Encyclopédie Catholique*, and among other writings published a pamphlet entitled *Où est-ce que la Propriété*, which opened with the celebrated doctrine "*Property is Theft*," and for which he was censured by the Academy, and deprived of his allowance. In 1841 he issued another pamphlet upon the same subject, and again in 1842, for which he was arraigned before a jury at Besançon, but acquitted. His principal work is entitled *Système des Contradictions Economiques, ou Philosophie de la Misère* (1846, 2 vols.). On the breaking out of the revolution of 1848 he was engaged in the publication of his *Solution du Problème Social*, a plan of social reform by means of a new organization of credit and monetary circulation. About this time he started a new paper, *Le Peuple*, which made a great sensation at the time, and subsequently several other short-lived journals of like character, which for their rash and violent tone

were repeatedly condemned by the courts. He was also elected a member of the Constitutional Assembly, which almost unanimously denounced a proposition made by him as "an odious attack upon the principles of public morality, and an appeal to the worst passions." In January, 1849, he undertook to establish the "People's Bank," an institution of gratuitous credit, by means of which he hoped to bring his theory into operation; but on March 28th he was sentenced to three years' imprisonment for illegal publications. He has since written a large number of works in defence of his peculiar views on society. By many of his last pamphlets, for instance, that against the unity of Italy, he gave great offence to the Liberal party. His latest work is entitled *La Paix et la Guerre*. Since his death, the eminent Parisian and Belgian publishers, Lacroix & Co., who had undertaken the posthumous publication of his works for the benefit of his family, have been condemned to fine and imprisonment for their publication.

PRUSSIA, a kingdom in Europe. Reigning King, Wilhelm I., born March 22, 1797; succeeded his brother, Friedrich Wilhelm III., on January 2, 1861. Heir apparent, Prince Friedrich Wilhelm, born October 18, 1831.

The present Constitution bears date January 31, 1850, but it has been modified by royal decrees of April 30, 1851; May 21 and June 5, 1852; May 7 and May 24, 1853; June 10 and October 12, 1854; May 30, 1855, and May 15, 1857. According to this Constitution the crown is hereditary in the male line only. The King attains his majority upon completing his eighteenth year. The Legislative Assembly is composed of two houses, the "Herrenhaus" or House of Lords, and the "Abgeordnetenhaus" or House of Deputies. The former consists of the royal princes; the heads of a number of noble houses; delegates from the landowners, universities, and "chapters;" the burgomasters of cities with more than 50,000 inhabitants; and a number of members nominated by the King for life, or for a number of years. The House of Deputies consists of 350 members. The mode of election is indirect, one elector being chosen for every 250 souls. Every Prussian who has attained his twenty-fifth year, and who is qualified to vote at municipal elections, has the right of voting; but the voters of a district are divided into three classes, according to the amount of direct taxes they pay. Those voters who pay the highest taxes, to the amount of one-third of the whole, form the first class; those who pay the next highest amount, also to the amount of one-third of the whole, form the second; and all the others the third class. Deputies must have attained the thirtieth year. The executive Government is carried on under the King by a Council of State ("Staatsrath"), embracing all the royal princes, and an unlimited number of members appointed by the King, and a council of ministers, divided into nine departments. The min-

istry, in 1865, consisted of the following members: Count von Bismark-Schönhausen (Foreign Affairs, and Presidency of the Cabinet); E. von Bodelschwing-Velmede (Finance); A. von Schleinitz (Royal House); Count zu Eulenburg (Interior); Gen. von Roon (War); Count L. Zur Lippe (Justice); von Mähler (Public Instruction and Ecclesiastical Affairs); von Selchow (Agriculture); Count von Itzenplitz (Commerce). In point of administration, the kingdom is divided into eight provinces, each placed under one "Oberpräsident" (Governor).

The area of the kingdom, including the district of Yahde, which the Government, in 1854, purchased from Oldenburg, is 107,757 English square miles. Adding the duchy of Lauenburg (see LAUENBURG), which, in accordance with the Convention of Gastein (see GASTKIN), was taken possession of by Prussia in September, 1865, the total area of the dominions of the King of Prussia is 108,212 square miles.

The population, according to the census of 1864, was as follows:

Provinces and Districts.	Population.	Provinces and Districts.	Population.
1. Prussia	3,014,595	8. Rhine Provinces	2,344,196
2. Posen	1,523,739	Hohenzollern	64,555
3. Pomerania	1,437,575	Yahde	1,573
4. Brandenburg	3,510,706	Lauenburg	43,794
5. Silesia	2,616,563	Military abroad	25,339
6. Saxony	2,043,975		
7. Westphalia	1,666,561	Total	13,394,643

As regards the religion of the inhabitants, 11,592,451 are members of the Evangelical Church, 7,115,851 Roman Catholics, 260,751 Israelites, 40,111 Dissidents, 1,514 members of the Greek Church. To non-German nationalities belong 2,504,179.

The following towns have a population of more than 50,000 inhabitants (being therefore entitled to be represented through their Burgomaster in the House of Lords): Berlin, 609,788; Breslau, 156,644; Cologne, 117,000; Königsberg, 94,827; Magdeburg, 91,028; Danzig, 78,181; Aix-la-Chapelle, 62,444; Stettin, 65,058; Elberfeld, 61,995; Crefeld, 53,397; Barmen, 59,526.

The revenue in the "Budget" for 1865 was estimated at 150,714,031 thalers, and the expenditure at 150,599,164 thalers. Since 1862 the House of Deputies has refused to vote the "Budget," and the estimates have been simply fixed by royal decree.

The army is composed as follows:

	Peace- footing.	War- footing.
Field Troops	190,333	350,905
Reserves	122,928
Garrison	9,699	153,197
Total	199,963	626,925
To these must be added, in time of war, 116 ("the Landwehr") Battalions		95,499
Second call		729,121
Total		

The Prussian fleet consisted, in 1865, of the following vessels: 37 steamers (246 guns), 8

sailing-vessels (140 guns), 40 rowing-vessels (76 guns). Total, 85 war-vessels (462 guns). The movement of shipping was, in 1864, as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Lasts.	Vessels.	Lasts.
Prussian	5,409	444,064	5,415	436,818
Foreign.....	2,978	220,748	8,027	283,811
Total.....	8,384	664,812	8,442	671,694

The merchant navy, in 1864, consisted of 1,665 vessels, of a total burden of 191,197 lasts.

The policy which the Prussian Government, under the leadership of Count von Bismark, has been pursuing for several years, underwent no change in 1865. The King's speech, on the opening of the Diet on January 14th, showed that the Government did not intend to recede from the demands which the majority of the Second Chamber regarded as a violation of the Constitution. The Second Chamber, in its turn, manifested its determination to remain firm in the advocacy of the popular rights, by reflecting its former President (Herr von Grabow) and Vice-Presidents. The chief subject of dispute was the reorganization of the Prussian army. On February 8th, the Minister of War introduced, in the Chamber of Deputies, a bill altering and supplementing by 20 paragraphs the law of the 3d of September, 1814, upon the obligation to military service in Prussia. Under the proposed new regulations the whole term of military service is reduced from 19 to 16 years, of which the first seven years are to be served in the regular standing army. Of these seven years the first three must be served with a regiment, and the four following years in the reserve. During the next four years, those having fulfilled the above terms of service will be liable under the first call of the Landwehr, and during the remaining five years to the second call. The first division of the Landwehr will only be called out when the country is in serious danger. Special laws will regulate the service in the Landwehr and in the navy. On introducing this bill, the Minister of War, Lieutenant-General Von Roon, said he hoped that the wish of the country for reconciliation between the Diet and the Government might find an echo in the house. The Government, although maintaining its projects for the reorganization of the army, was willing to renounce the execution of the original scheme in its full extent. A cordial agreement upon the treatment of the pending military question could only be obtained by a mutual understanding on the points at issue between the Government and the Diet. The minister said in conclusion: "The Government have this object in view in introducing the present bill, and is convinced of the necessity of all army reform being effected on a parliamentary basis."

The Second Chamber saw in this bill no concession, and therefore resolved to express, in

their address to the King, their regret that such a bill had been introduced. According to the report of the military commission of the Chamber, which was distributed in April, and had been drawn up by Professor Gneist, of Berlin, the five most important points on which the Chamber differed from the Government were the following: 1. The effectiveness of the army. At the period when the Constitution was accorded the numbers were 181,000 men; in 1858, 151,000; and now, in consequence of the reorganization, 212,000. 2. The number of corps. There were formerly 126 battalions of infantry and 182 squadrons of cavalry; but since the reorganization there are 248 of the former and 200 of the latter. 3. Position of the landwehr. According to existing laws the first ban ought to be of the same strength as the permanent army, in corresponding corps; but since the reorganization the landwehr is composed of only 117 battalions, considerably reduced, and of the depots of the twelve regiments of the landwehr cavalry. 4. Duration of service in the permanent army. The desire is to increase it from five to seven years, in view of the reorganization. 5. Active service. The wish of the Government is to fix it in an absolute manner at a general duration of three years. As the Government treated the resolutions passed by the Chamber with contempt, the Chamber again refused to pass the budget. The Government finding the majority of the Chamber unyielding, closed the session on June 17th.

The chief feature of the foreign policy of Prussia, was the incessant pursuit of a plan for the annexation of the duchies of Schleswig-Holstein and Lauenburg. The "crown jurists" of the Government prepared a statement, according to which the King of Denmark, and not the Prince of Augustenburg or any other prince, had been, up to October 30, 1864 (the date of the treaty of Vienna), the lawful sovereign of the duchies, and that his right had been ceded by that treaty to the King of Prussia and the Emperor of Austria. Prussia, therefore, rejected all the endeavors made by the Prince of Augustenburg for the purpose of obtaining his recognition by Prussia as Duke of Schleswig-Holstein (*see SCHLESWIG-HOLSTEIN*), as well as the attempts made by the Federal Diet to establish its competency to settle the question of the succession (*see GERMANY*). Austria, which was favorable to the claim made by the Federal Diet, was prevailed upon to consent, by the Convention of Gastein (*see GASTEIN*), to a temporary division of the government of the duchies of Schleswig and Holstein between the two great Powers, and to cede its right to Lauenburg for a pecuniary consideration to Prussia (*see AUSTRIA and LAUENBURG*). From that time the Government of Prussia made the utmost efforts to induce Austria to cede likewise its right to the two other duchies; but this effort was not successful, and the relations to Austria were therefore at the close of the year any thing but friendly

PUBLIC DOCUMENTS. *Inaugural Address of ABRAHAM LINCOLN as President of the United States, March 4th, 1865.*

Fellow-Countrymen:

At this second appearing to take the oath of the presidential office, there is less occasion for an extended address than there was at the first. Then, a statement, somewhat in detail, of a course to be pursued, seemed fitting and proper. Now, at the expiration of four years, during which public declarations have been constantly called forth on every point and phase of the great contest which still absorbs the attention and engrosses the energies of the nation, little that is new could be presented. The progress of our arms, upon which all else chiefly depends, is as well known to the public as to myself; and it is, I trust, reasonably satisfactory and encouraging to all. With high hope for the future, no prediction in regard to it is ventured.

On the occasion corresponding to this four years ago, all thoughts were anxiously directed to an impending civil war. All dreaded it; all sought to avert it. While the inaugural address was being delivered from this place, devoted altogether to saving the Union without war, insurgent agents were in the city seeking to destroy it without war—seeking to dissolve the Union, and divide effects, by negotiation. Both parties deprecated war; but one of them would make war rather than let the nation survive; and the other would accept war rather than let it perish. And the war came.

One-eighth of the whole population were colored slaves, not distributed generally over the Union, but localized in the southern part of it. These slaves constituted a peculiar and powerful interest. All knew that this interest was, somehow, the cause of the war. To strengthen, perpetuate, and extend this interest was the object for which the insurgents would rend the Union, even by war; while the Government claimed no right to do more than to restrict the territorial enlargement of it. Neither party expected for the war the magnitude or the duration which it has already attained. Neither anticipated that the cause of the conflict might cease with, or even before, the conflict itself should cease. Each looked for an easier triumph, and a result less fundamental and astounding. Both read the same Bible, and pray to the same God; and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in warring their bread from the sweat of other men's faces; but let us judge not, that we be not judged. The prayers of both could not be answered; that of neither has been answered fully. The Almighty has His own purposes. "Woe unto the world because of offences! for it must needs be that offences come, but woe to that man by whom the offence cometh." If we shall suppose American slavery is one of those offences which, in the providence of God, must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war, as the woe due to those by whom the offence came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondman's two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said, "The judgments of the Lord are true and righteous altogether."

With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have

borne the battle, and for his widow, and his orphan; to do all which may achieve and cherish a just and a lasting peace among ourselves and with all nations.

ABRAHAM LINCOLN.

Message of President JOHNSON, at the first session of the thirty-ninth Congress.

Fellow-Citizens of the Senate and House of Representatives:

To express gratitude to God, in the name of the People, for the preservation of the United States, is my first duty in addressing you. Our thoughts next revert to the death of the late President by an act of partricial treason. The grief of the nation is still fresh; it finds some solace in the consideration that he lived to enjoy the highest proof of its confidence by entering on the renewed term of the Chief Magistracy, to which he had been elected; that he brought the civil war substantially to a close; that his loss was deplored in all parts of the Union; and that foreign nations have rendered justice to his memory. His removal cast upon me a heavier weight of cares than ever devolved upon any one of his predecessors. To fulfil my trust I need the support and confidence of all who are associated with me in the various departments of Government, and the support and confidence of the people. There is but one way in which I can hope to gain their necessary aid; it is, to state with frankness the principles which guide my conduct, and their application to the present state of affairs, well aware that the efficiency of my labor will, in a great measure, depend on your and their undivided approbation.

The Union of the United States of America was intended by its authors to last as long as the States themselves shall last. "The Union shall be perpetual" are the words of the Confederation. "To form a more perfect Union," by an ordinance of the people of the United States, is the declared purpose of the Constitution. The hand of Divine Providence was never more plainly visible in the affairs of men than in the framing and the adopting of that instrument. It is, beyond comparison, the greatest event in American history; and indeed is it not of all events in modern times, the most pregnant with consequences for every people of the earth? The members of the Convention which prepared it brought to their work the experience of the Confederation, of their several States, and of other Republican Governments, old and new; but they needed and they obtained a wisdom superior to experience. And when for its validity it required the approval of a people that occupied a large part of a continent and acted separately in many distinct conventions, what is more wonderful than that, after earnest contention and long discussion, all feelings and all opinions were ultimately drawn in one way to its support?

The Constitution to which life was thus imparted contains within itself ample resources for its own preservation. It has power to enforce the laws, punish treason, and insure domestic tranquillity. In case of the usurpation of the government of a State by one man, or an oligarchy, it becomes a duty of the United States to make good the guaranty to that State of a republican form of government, and so to maintain the homogeneity of all. Does the lapse of time reveal defects? A simple mode of amendment is provided in the Constitution itself, so that its conditions can always be made to conform to the requirements of advancing civilization. No room is allowed even for the thought of a possibility of its coming to an end. And these powers of self-preservation have always been asserted in their complete integrity by every patriotic Chief Magistrate—by Jefferson and Jackson, not less than by Washington and Madison. The parting advice of the Father of his Country, while yet President, to the people of the United States, was, that "the free Constitution, which was the work of their hands, might be sacredly

maintained;" and the inaugural words of President Jefferson held up "the preservation of the General Government, in its constitutional vigor, as the sheet anchor of our peace at home and safety abroad." The Constitution is the work of "the people of the United States," and it should be as indestructible as the people.

It is not strange that the framers of the Constitution, which had no model in the past, should not have fully comprehended the excellence of their own work. Fresh from a struggle against arbitrary power, many patriots suffered from harassing fears of an absorption of the State governments by the General Government, and many from a dread that the States would break away from their orbits. But the very greatness of our country should allay the apprehension of encroachments by the General Government. The subjects that come unquestionably within its jurisdiction are so numerous, that it must ever naturally refuse to be embarrassed by questions that lie beyond it. Were it otherwise, the Executive would sink beneath the burden; the channels of justice would be choked; legislation would be obstructed by excess; so that there is a greater temptation to exercise some of the functions of the General Government through the States than to trespass on their rightful sphere. "The absolute acquiescence in the decisions of the majority" was, at the beginning of the century, enforced by Jefferson "as the vital principle of republics," and the events of the last four years have established, we will hope forever, that there lies no appeal to force.

The maintenance of the Union brings with it "the support of the State Governments in all their rights;" but it is not one of the rights of any State government to renounce its own place in the Union, or to nullify the laws of the Union. The largest liberty is to be maintained in the discussion of the acts of the Federal Government; but there is no appeal from its laws, except to the various branches of the Government itself, or to the people, who grant to the members of the Legislative and of the Executive Departments no tenure but a limited one, and in that manner always retain the powers of redress.

"The sovereignty of the States" is the language of the Confederacy, and not the language of the Constitution. The latter contains the emphatic words: "The Constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding."

Certainly the Government of the United States is a limited government; and so is every State government. With us, this idea of limitation spreads through every form of administration, general, State, and municipal, and rests on the great distinguishing principle of the recognition of the rights of man. The ancient republics absorbed the individual in the State, prescribed his religion, and controlled his activity. The American system rests on the assertion of the equal right of every man to life, liberty, and the pursuit of happiness; to freedom of conscience, to the culture and exercise of all his faculties. As a consequence, the State Government is limited, as to the General Government in the interest of Union, as to the individual citizen in the interest of freedom.

States, with proper limitations of power, are essential to the existence of the Constitution of the United States. At the very commencement, when we assumed a place among the Powers of the earth, the Declaration of Independence was adopted by States; so also were the Articles of Confederation; and when "the People of the United States" ordained and established the Constitution, it was the assent of the States, one by one, which gave it vitality. In the event, too, of any amendment to the Constitution, the proposition of Congress needs the confirmation

of States. Without States, one great branch of the legislative government would be wanting. And, if we look beyond the letter of the Constitution to the character of our country, its capacity for comprehending within its jurisdiction a vast continental empire is due to the system of States. The best security for the perpetual existence of the States is the "supreme authority" of the Constitution of the United States. The perpetuity of the Constitution brings with it the perpetuity of the States; their mutual relation makes us what we are, and in our political system their connection is indissoluble. The whole cannot exist without the parts, nor the parts without the whole. So long as the Constitution of the United States endures, the States will endure; the destruction of the one is the destruction of the other; the preservation of the one is the preservation of the other.

I have thus explained my views of the mutual relations of the Constitution and the States, because they unfold the principles on which I have sought to solve the momentous questions and overcome the appalling difficulties that met me at the very commencement of my administration. It has been my steadfast object to escape from the sway of momentary passions, and to derive a healing policy from the fundamental and unchanging principles of the Constitution.

I found the States suffering from the effects of a civil war. Resistance to the General Government appeared to have exhausted itself. The United States had recovered possession of their forts and arsenals; and their armies were in the occupation of every State which had attempted to secede. Whether the territory within the limits of those States should be held as conquered territory, under military authority emanating from the President as the head of the army, was the first question that presented itself for decision.

Now, military governments, established for an indefinite period, would have offered no security for the early suppression of discontent; would have divided the people into the vanquishers and the vanquished; and would have envenomed hatred, rather than have restored affection. Once established, no precise limit to their continuance was conceivable. They would have occasioned an incalculable and exhausting expense. Peaceful emigration to and from that portion of the country is one of the best means that can be thought of for the restoration of harmony; and that emigration would have been prevented; for what emigrant from abroad, what industrious citizen at home would place himself willingly under military rule? The chief persons who would have followed in the train of the army would have been dependants on the General Government, or men who expected profit from the miseries of their erring fellow-citizens. The powers of patronage and rule which would have been exercised, under the President, over a vast, and populous, and naturally wealthy region, are greater than, unless under extreme necessity, I should be willing to intrust to any one man; they are such as, for myself, I could never, unless on occasions of great emergency, consent to exercise. The wilful use of such powers, if continued through a period of years, would have endangered the purity of the general administration and the liberties of the States which remained loyal.

Besides, the policy of military rule over a conquered territory would have implied that the State whose inhabitants may have taken part in the rebellion, had, by the act of those inhabitants, ceased to exist. But the true theory is, that all pretended acts of secession were, from the beginning, null and void. The States cannot commit treason, nor screen the individual citizens who may have committed treason, any more than they can make valid treaties or engage in lawful commerce with any foreign Power. The States attempting to secede, placed themselves in a condition where their vitality was impaired. but

not extinguished—their functions suspended, but not destroyed.

But if any State neglects or refuses to perform its offices, there is the more need that the General Government should maintain all its authority, and, as soon as practicable, resume the exercise of all its functions. On this principle I have acted, and have gradually and quietly, and by almost imperceptible steps, sought to restore the rightful energy of the General Government and of the States. To that end, Provisional Governors have been appointed for the States, Conventions called, Governors elected, Legislatures assembled, and Senators and Representatives chosen to the Congress of the United States. At the same time, the Courts of the United States, as far as could be done, have been reopened, so that the laws of the United States may be enforced through their agency. The blockade has been removed, and the custom-houses reestablished in ports of entry, so that the revenue of the United States may be collected. The Post-Office Department renews its ceaseless activity, and the General Government is thereby enabled to communicate promptly with its officers and agents. The courts bring security to persons and property; the opening of the ports invites the restoration of industry and commerce; the post-office renews the facilities of social intercourse and of business. And is it not happy for us all, that the restoration of each one of these functions of the General Government, brings with it a blessing to the States over which they are extended? Is it not a sure promise of harmony and renewed attachment to the Union that, after all that has happened, the return of the General Government is known only as a beneficence?

I know very well that this policy is attended with some risk; that for its success it requires at least the acquiescence of the States which it concerns; that it implies an invitation to those States, by renewing their allegiance to the United States, to resume their functions as States of the Union. But it is a risk that must be taken; in the choice of difficulties, it is the smallest risk; and to diminish, and, if possible, to remove all danger, I have felt it incumbent on me to assert one other power of the General Government—the power of pardon. As no State can throw a defence over the crime of treason, the power of pardon is exclusively vested in the Executive Government of the United States. In exercising that power, I have taken every precaution to connect it with the clearest recognition of the binding force of the laws of the United States, and an unqualified acknowledgment of the great social change of condition in regard to slavery which has grown out of the war.

The next step which I have taken to restore the constitutional relations of the States, has been an invitation to them to participate in the high office of amending the Constitution. Every patriot must wish for a general amnesty at the earliest epoch consistent with public safety. For this great end there is need of a concurrence of all opinions, and the spirit of mutual conciliation. All parties in the late terrible conflict, must work together in harmony. It is not too much to ask, in the name of the whole people, that, on the one side, the plan of restoration shall proceed in conformity with a willingness to cast the disorders of the past into oblivion; and that, on the other, the evidence of sincerity in the future maintenance of the Union, shall be put beyond any doubt by the ratification of the proposed amendment to the Constitution, which provides for the abolition of slavery forever within the limits of our country. So long as the adoption of this amendment is delayed, so long will doubt and jealousy and uncertainty prevail. This is the measure which will efface the sad memory of the past; this is the measure which will most certainly call population, and capital, and security to those parts of the Union that need them most. Indeed, it is not too much to ask of the States which are now resuming their places in the family of the Union, to give this pledge of perpetual loyalty and peace. Until it is done, the past,

however much we may desire it, will not be forgotten. The adoption of the amendment, reunites us beyond all power of disruption. It heals the wound that is still imperfectly closed; it removes slavery, the element which has so long perplexed and divided the country; it makes of us once more a united people, renewed and strengthened, bound more than ever to mutual affection and support.

The amendment to the Constitution being adopted, it would remain for the States, whose powers have been so long in abeyance, to resume their places in the two branches of the National Legislature, and thereby complete the work of restoration. Here it is for you, fellow-citizens of the Senate, and for you, fellow-citizens of the House of Representatives, to judge, each of you for yourselves, of the elections, returns, and qualifications of your own members.

The full assertion of the powers of the General Government, requires the holding of Circuit Courts of the United States within the districts where their authority has been interrupted. In the present posture of our public affairs, strong objections have been urged to holding those courts in any of the States where the rebellion has existed; and it was ascertained, by inquiry, that the Circuit Court of the United States would not be held within the District of Virginia during the autumn or early winter, nor until Congress should have "an opportunity to consider and act on the whole subject." To your deliberations the restoration of this branch of the civil authority of the United States is therefore necessarily referred, with the hope that early provision will be made for the resumption of all its functions. It is manifest that treason, most flagrant in character, has been committed. Persons who are charged with its commission, should have fair and impartial trials in the highest civil tribunals of the country, in order that the Constitution and the laws may be fully vindicated; the truth clearly established and affirmed that treason is a crime, that traitors should be punished and the offence made infamous; and, at the same time, that the question may be judicially settled, finally and forever, that no State of its own will has the right to renounce its place in the Union.

The relations of the General Government toward the four millions of inhabitants whom the war has called into freedom, have engaged my most serious consideration. On the propriety of attempting to make the freedmen electors by the proclamation of the Executive, I took for my counsel the Constitution itself, the interpretations of that instrument by its authors and their contemporaries, and recent legislation by Congress. When, at the first movement toward independence, the Congress of the United States instructed the several States to institute governments of their own, they left each State to decide for itself, the conditions for the enjoyment of the elective franchise. During the period of the Confederacy, there continued to exist a very great diversity in the qualifications of electors in the several States; and even within a State, a distinction of qualifications prevailed with regard to the officers who were to be chosen. The Constitution of the United States recognizes these diversities when it enjoins that in the choice of members of the House of Representatives of the United States, "the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature."

After the formation of the Constitution, it remained, as before, the uniform usage for each State to enlarge the body of its electors, according to its own judgment; and, under this system, one State after another has proceeded to increase the number of its electors, until now universal suffrage, or something very near it, is the general rule. So fixed was this reservation of power in the habits of the people, and so unquestioned has been the interpretation of the Constitution, that during the civil war the late President never harbored the purpose—certainly never avowed the purpose—of disregarding it; and in the acts of Con-

gress, during that period, nothing can be found which, during the continuance of hostilities, much less after their close, would have sanctioned any departure by the Executive, from a policy which has so uniformly obtained. Moreover, a concession of the elective franchise to the freedmen, by act of the President of the United States, must have been extended to all colored men, wherever found, and so must have established a change of suffrage in the Northern, Middle, and Western States, not less than in the Southern and Southwestern. Such an act would have created a new class of voters, and would have been an assumption of power by the President which nothing in the Constitution or laws of the United States would have warranted.

On the other hand, every danger of conflict is avoided when the settlement of the question is referred to the several States. They can, each for itself, decide on the measure, and whether it is to be adopted at once and absolutely, or introduced gradually and with conditions. In my judgment, the freedmen, if they show patience and manly virtues, will sooner obtain a participation in the elective franchise through the States than through the General Government, even if it had power to intervene. When the tumult of emotions that have been raised by the suddenness of the social change shall have subsided, it may prove that they will receive the kindest usage from some of those on whom they have heretofore most closely depended.

But while I have no doubt that now, after the close of the war, it is not competent for the General Government to extend the elective franchise in the several States, it is equally clear that good faith requires the security of the freedmen in their liberty and their property, their right to labor, and their right to claim the just return of their labor. I cannot too strongly urge a dispassionate treatment of this subject, which should be carefully kept aloof from all party strife. We must avoid hasty assumptions of any natural impossibility for the two races to live side by side, in a state of mutual benefit and good will. The experiment involves us in no inconsistency; let us, then, go on and make that experiment in good faith, and not be too easily disheartened. The country is in need of labor, and the freedmen are in need of employment, culture, and protection. While their right of voluntary migration and expatriation is not to be questioned, I would not advise their forced removal and colonization. Let us rather encourage them to honorable and useful industry, where it may be beneficial to themselves and to the country; and, instead of hasty anticipations of the certainty of failure, let there be nothing wanting to the fair trial of the experiment. The change in their condition is the substitution of labor by contract, for the status of slavery. The freedman cannot fairly be accused of unwillingness to work, so long as a doubt remains about his freedom of choice in his pursuits, and the certainty of his recovering his stipulated wages. In this the interests of the employer and the employed coincide. The employer desires in his workmen spirit and alacrity, and these can be permanently secured in no other way. And if the one ought to be able to enforce the contract, so ought the other. The public interest will be best promoted, if the several States will provide adequate protection and remedies for the freedmen. Until this is in some way accomplished, there is no chance for the advantageous use of their labor; and the blame of ill success will not rest on them.

I know that sincere philanthropy is earnest for the immediate realization of its remotest aims; but time is always an element in reform. It is one of the greatest acts on record, to have brought four millions of people into freedom. The career of free industry must be fairly opened to them; and then their future prosperity and condition must, after all, rest mainly on themselves. If they fail, and so perish away, let us be careful that the failure shall not be attributable

to any denial of justice. In all that relates to the destiny of the freedmen, we need not be too anxious to read the future; many incidents which, from a speculative point of view, might raise alarm, will quietly settle themselves.

Now that slavery is at an end, or near its end, the greatness of its evil, in the point of view of public economy, becomes more and more apparent. Slavery was essentially a monopoly of labor, and as such locked the States where it prevailed against the incoming of free industry. Where labor was the property of the capitalist, the white man was excluded from employment, or had but the second best chance of finding it; and the foreign emigrant turned away from the region where his condition would be so precarious. With the destruction of the monopoly, free labor will hasten from all parts of the civilized world to assist in developing various and immeasurable resources which have hitherto lain dormant. The eight or nine States nearest the Gulf of Mexico, have a soil of exuberant fertility, a climate friendly to long life, and can sustain a denser population than is found as yet in any part of our country. And the future influx to them will be mainly from the North, or from the most cultivated nations in Europe. From the sufferings that have attended them during our late struggle, let us look away to the future, which is sure to be laden for them with greater prosperity than has ever before been known. The removal of the monopoly of slave labor, is a pledge that those regions will be peopled by a numerous and enterprising population, which will vie with any in the Union in compactness, inventive genius, wealth, and industry.

Our Government springs from, and was made for the people—not the people for the Government. To them it owes allegiance; from them it must derive its courage, strength, and wisdom. But, while the Government is thus bound to defer to the people, from whom it derives its existence, it should, from the very consideration of its origin, be strong in its power of resistance to the establishment of inequalities. Monopolies, perpetuities, and class legislation are contrary to the genius of free government, and ought not to be allowed. Here, there is no room for favored classes or monopolies; the principle of our Government is that of equal laws and freedom of industry. Wherever monopoly attains a foothold, it is sure to be a source of danger, discord, and trouble. We shall but fulfil our duties as legislators, by according "equal and exact justice to all men," special privileges to none. The Government is subordinate to the people; but, as the agent and representative of the people, it must be held superior to monopolies, which, in themselves, ought never to be granted, and which, where they exist, must be subordinate and yield to the Government.

The Constitution confers on Congress the right to regulate commerce among the several States. It is of the first necessity, for the maintenance of the Union, that that commerce should be free and unobstructed. No State can be justified in any device to tax the transit of travel and commerce between States. The position of many States is such that, if they were allowed to take advantage of it for the purposes of local revenue, the commerce between States might be injuriously burdened, or even virtually prohibited. It is best, while the country is still young, and while the tendency to dangerous monopolies of this kind is still feeble, to use the power of Congress so as to prevent any selfish impediment to the free circulation of men and merchandise. A tax on travel and merchandise, in their transit, constitutes one of the worst forms of monopoly, and the evil is increased if coupled with a denial of the choice of route. When the vast extent of our country is considered, it is plain that every obstacle to the free circulation of commerce between the States ought to be sternly guarded against by appropriate legislation, within the limits of the Constitution.

The report of the Secretary of the Interior explains the condition of the public lands, the transactions of the Patent Office and the Pension Bureau, the management of our Indian affairs, the progress made in the construction of the Pacific Railroad, and furnishes information in reference to matters of local interest in the District of Columbia. It also presents evidence of the successful operation of the Homestead Act, under the provisions of which 1,160,583 acres of the public lands were entered during the last fiscal year—more than one-fourth of the whole number of acres sold or otherwise disposed of during that period. It is estimated that the receipts derived from this source are sufficient to cover the expenses incident to the survey and disposal of the lands entered under this act, and that payments in cash to the extent of from forty to fifty per cent. will be made by settlers, who may thus at any time acquire title before the expiration of the period at which it would otherwise vest. The homestead policy was established only after long and earnest resistance; experience proves its wisdom. The lands, in the hands of industrious settlers, whose labor creates wealth and contributes to the public resources, are worth more to the United States than if they had been reserved as a solitude for future purchasers.

The lamentable events of the last four years, and the sacrifices made by the gallant men of our army and navy, have swelled the records of the Pension Bureau to an unprecedented extent. On the 30th day of June last, the total number of pensioners was 85,988, requiring for their annual pay, exclusive of expenses, the sum of \$3,023,445. The number of applications that have been allowed since that date will require a large increase of this amount for the next fiscal year. The means for the payment of the stipends due, under existing laws, to our disabled soldiers and sailors, and to the families of such as have perished in the service of the country, will no doubt be cheerfully and promptly granted. A grateful people will not hesitate to sanction any measures having for their object the relief of soldiers mutilated and families made fatherless in the efforts to preserve our national existence.

The report of the Postmaster-General presents an encouraging exhibit of the operations of the Post-Office Department during the year. The revenues of the past year from the loyal States alone exceeded the maximum annual receipts from the States previous to the rebellion in the sum of \$6,038,091; and the annual average increase of revenue during the last four years, compared with the revenues of the last four years immediately preceding the rebellion, was \$3,533,845. The revenues of the last fiscal year amounted to \$14,538,158, and the expenditures to \$13,694,728, leaving a surplus of receipts over expenditures of \$861,430. Progress has been made in restoring the postal service in the Southern States. The views presented by the Postmaster-General against the policy of granting subsidies to ocean mail steamship lines upon established routes, and in favor of continuing the present system, which limits the compensation for ocean service to the postage earnings, are recommended to the careful consideration of Congress.

It appears, from the report of the Secretary of the Navy, that while, at the commencement of the present year, there were in commission 530 vessels of all classes and descriptions, armed with 3,000 guns and manned by 51,000 men; the number of vessels at present in commission is 117, with 830 guns and 13,128 men. By this prompt reduction of the naval forces the expenses of the Government have been largely diminished, and a number of vessels, purchased for naval purposes from the merchant marine, have been returned to the peaceful pursuits of commerce. Since the suppression of active hostilities our foreign squadrons have been reestablished, and consist of vessels much more efficient than those employed on similar service previous to the rebellion.

The suggestion for the enlargement of the navy yards, and especially for the establishment of one in fresh water for iron-clad vessels, is deserving of consideration, as is also the recommendation for a different location and more ample grounds for the Naval Academy.

In the report of the Secretary of War, a general summary is given of the military campaigns of 1864 and 1865, ending in the suppression of armed resistance to the national authority in the insurgent States. The operations of the general administrative Bureaus of the War Department during the past year are detailed, and an estimate made of the appropriations that will be required for military purposes in the fiscal year commencing the 30th day of June, 1866. The national military force on the 1st of May, 1865, numbered 1,000,516 men. It is proposed to reduce the military establishment to a peace footing, comprehending fifty thousand troops of all arms, organized so as to admit of an enlargement by filling up the ranks to eighty-two thousand six hundred, if the circumstances of the country should require an augmentation of the army. The volunteer force has already been reduced by the discharge from service of over eight hundred thousand troops, and the Department is proceeding rapidly in the work of further reduction. The war estimates are reduced from \$516,340,181 to \$33,814,461, which amount, in the opinion of the Department, is adequate for a peace establishment. The measures of retrenchment in each Bureau and branch of the service exhibit a diligent economy worthy of commendation. Reference is also made in the report to the necessity of providing for a uniform militia system, and to the propriety of making suitable provision for wounded and disabled officers and soldiers.

The revenue system of the country is a subject of vital interest to its honor and prosperity, and should command the earnest consideration of Congress. The Secretary of the Treasury will lay before you a full and detailed report of the receipts and disbursements of the last fiscal year, of the first quarter of the present fiscal year, of the probable receipts and expenditures for the other three quarters, and the estimates for the year following the 30th of June, 1866. I might content myself with a reference to that report, in which you will find all the information required for your deliberations and decision. But the paramount importance of the subject so presses itself on my own mind, that I cannot but lay before you my views of the measures which are required for the good character, and I might also say, for the existence of this people. The life of a republic lies certainly in the energy, virtue, and intelligence of its citizens; but it is equally true that a good revenue system is the life of an organized government. I meet you at a time when the nation has voluntarily burdened itself with a debt unprecedented in our annals. Vast as is its amount, it fades away into nothing when compared with the countless blessings that will be conferred upon our country and upon man by the preservation of the nation's life. Now, on the first occasion of the meeting of Congress since the return of peace, it is of the utmost importance to inaugurate a just policy, which shall at once be put in motion, and which shall commend itself to those who come after us for its continuance. We must aim at nothing less than the complete effacement of the financial evils that necessarily followed a state of civil war. We must endeavor to apply the earliest remedy to the deranged state of the currency, and not shrink from devising a policy which, without being oppressive to the people, shall immediately begin to effect a reduction of the debt, and, if persisted in, discharge it fully within a definitely fixed number of years.

It is our first duty to prepare in earnest for our recovery from the ever-increasing evils of an irredeemable currency, without a sudden revulsion, and yet without untimely procrastination. For that end, we must, each in our respective positions, prepare

the way. I hold it the duty of the Executive to insist upon a frugality in the expenditures; and a sparing economy is itself a great national resource. Of the banks to which authority has been given to issue notes secured by bonds of the United States, we may require the greatest moderation and prudence, and the law must be rigidly enforced when its limits are exceeded. We may, each one of us, counsel our active and enterprising countrymen to be constantly on their guard, to liquidate debts contracted in a paper currency, and, by conducting business as nearly as possible on a system of cash payment or short credits, to hold themselves prepared to return to the standard of gold and silver. To aid our fellow-citizens in the prudent management of their monetary affairs, the duty devolves on us to diminish by law the amount of paper money now in circulation. Five years ago the bank-note circulation of the country amounted to not much more than two hundred millions; now the circulation, bank and national, exceeds seven hundred millions. The simple statement of the fact recommends more strongly than any words of mine could do, the necessity of our restraining this expansion. The gradual reduction of the currency is the only measure that can save the business of the country from disastrous calamities; and this can be almost imperceptibly accomplished by gradually funding the national circulation in securities that may be made redeemable at the pleasure of the Government.

Our debt is doubly secure—first in the actual wealth and still greater undeveloped resources of the country; and next in the character of our institutions. The most intelligent observers among political economists have not failed to remark, that the public debt of a country is safe in proportion as its people are free; that the debt of a republic is the safest of all. Our history confirms and establishes the theory, and is, I firmly believe, destined to give it a still more signal illustration. The secret of this superiority springs not merely from the fact that in a republic the national obligations are distributed more widely through countless numbers in all classes of society; it has its root in the character of our laws. Here all men contribute to the public welfare, and bear their fair share of the public burdens. During the war, under the impulses of patriotism, the men of the great body of the people, without regard to their own comparative want of wealth, thronged to our armies and filled our fleets of war, and held themselves ready to offer their lives for the public good. Now, in their turn, the property and income of the country should bear their just proportion of the burden of taxation, while in our impost system, through means of which increased vitality is incidentally imparted to all the industrial interests of the nation, the duties should be so adjusted as to fall most heavily on articles of luxury, leaving the necessities of life as free from taxation as the absolute wants of the Government, economically administered, will justify. No favored class should demand freedom from assessment, and the taxes should be so distributed as not to fall unduly on the poor, but rather on the accumulated wealth of the country. We should look at the national debt just as it is—not as a national blessing, but as a heavy burden on the industry of the country, to be discharged without unnecessary delay.

It is estimated by the Secretary of the Treasury that the expenditures for the fiscal year ending the 30th of June, 1866, will exceed the receipts \$112,194,947. It is gratifying, however, to state that it is also estimated that the revenue for the year ending the 30th of June, 1867, will exceed the expenditures in the sum of \$111,682,818. This amount, or so much as may be deemed sufficient for the purpose, may be applied to the reduction of the public debt, which, on the 31st day of October, 1865, was \$2,740,854,750. Every reduction will diminish the total amount of interest to be paid, and so enlarge the means of still

further reductions, until the whole shall be liquidated; and this, as will be seen from the estimates of the Secretary of the Treasury, may be accomplished by annual payments even within a period not exceeding thirty years. I have faith that we shall do all this within a reasonable time; that, as we have amazed the world by the suppression of a civil war which was thought to be beyond the control of any Government, so we shall equally show the superiority of our institutions by the prompt and faithful discharge of our national obligations.

The Department of Agriculture, under its present direction, is accomplishing much in developing and utilizing the vast agricultural capabilities of the country, and for information respecting the details of its management reference is made to the annual report of the Commissioner.

I have dwelt thus fully on our domestic affairs because of their transcendent importance. Under any circumstances, our great extent of territory and variety of climate, producing almost every thing that is necessary for the wants, and even the comforts of man, make us singularly independent of the varying policy of foreign Powers, and protect us against every temptation to "entangling alliances," while at the present moment the reestablishment of harmony and the strength that comes from harmony, will be our best security against "nations who feel power and forget right." For myself, it has been and it will be my constant aim to promote peace and amity with all foreign nations and Powers; and I have every reason to believe that they all, without exception, are animated by the same disposition. Our relations with the Emperor of China, so recent in their origin, are most friendly. Our commerce with his dominions is receiving new developments; and it is very pleasing to find that the Government of that great Empire manifests satisfaction with our policy, and reposes just confidence in the fairness which marks our intercourse. The unbroken harmony between the United States and the Emperor of Russia is receiving a new support from an enterprise designed to carry telegraphic lines across the continent of Asia, through his dominions, and so to connect us with all Europe by a new channel of intercourse.

Our commerce with South America is about to receive encouragement by a direct line of mail steamships to the rising Empire of Brazil. The distinguished party of men of science who have recently left our country to make a scientific exploration of the natural history and rivers and mountain ranges of that region, have received from the Emperor that generous welcome which was to have been expected from his constant friendship for the United States, and his well-known zeal in promoting the advancement of knowledge. A hope is entertained that our commerce with the rich and populous countries that border the Mediterranean Sea may be largely increased. Nothing will be wanting, on the part of this Government, to extend the protection of our flag over the enterprise of our fellow-citizens. We receive from the Powers in that region assurances of good will; and it is worthy of note that a special envoy has brought us messages of condolence on the death of our late Chief Magistrate from the Bey of Tunis, whose rule includes the old dominions of Carthage, on the African coast.

Our domestic contest, now happily ended, has left some traces of our relations with one at least of the great maritime Powers. The formal accordance of belligerent rights to the insurgent States was unprecedented, and has not been justified by the issue. But in the systems of neutrality pursued by the Powers which made that concession, there was a marked difference. The materials of war for the insurgent States were furnished, in a great measure, from the workshops of Great Britain; and British ships, manned by British subjects, and prepared for receiving British armaments, sailed from the ports of Great Britain to make war on American commerce, under

the shelter of a commission from the insurgent States. These ships, having once escaped from British ports, ever afterward entered them in every part of the world, to refit, and so to renew their depredations. The consequences of this conduct were most disastrous to the States then in rebellion, increasing their desolation and misery by the prolongation of our civil contest. It had, moreover, the effect, to a great extent, to drive the American flag from the sea, and to transfer much of our shipping and our commerce to the very Power whose subjects had created the necessity for such a change. These events took place before I was called to the administration of the Government. The sincere desire for peace by which I am animated led me to approve the proposal, already made, to submit the questions which had thus arisen between the countries to arbitration. These questions are of such moment that they must have commanded the attention of the great Powers, and are so interwoven with the peace and interests of every one of them as to have insured an impartial decision. I regret to inform you that Great Britain declined the arbitrament, but, on the other hand, invited us to the formation of a joint commission to settle mutual claims between the two countries, from which those for the depredations before mentioned should be excluded. The proposition, in that very unsatisfactory form, has been declined.

The United States did not present the subject as an impeachment of the good faith of a Power which was professing the most friendly dispositions, but as involving questions of public law, of which the settlement is essential to the peace of nations; and, though pecuniary reparation to their injured citizens would have followed incidentally on a decision against Great Britain, such compensation was not their primary object. They had a higher motive, and it was in the interests of peace and justice to establish important principles of international law. The correspondence will be placed before you. The ground on which the British Minister rests his justification is, substantially, that the municipal law of a nation, and the domestic interpretations of that law, are the measure of its duty as a neutral; and I feel bound to declare my opinion, before you and before the world, that that justification cannot be sustained before the tribunal of nations. At the same time I do not advise to any present attempt at redress by acts of legislation. For the future, friendship between the two countries must rest on the basis of mutual justice.

From the moment of the establishment of our free Constitution, the civilized world has been convulsed by revolutions in the interests of democracy or of monarchy; but through all those revolutions the United States have wisely and firmly refused to become propagandists of republicanism. It is the only government suited to our condition; but we have never sought to impose it on others; and we have consistently followed the advice of Washington to recommend it only by the careful preservation and prudent use of the blessing. During all the intervening period the policy of European Powers and of the United States has, on the whole, been harmonious. Twice, indeed, rumors of the invasion of some parts of America, in the interest of monarchy, have prevailed; twice my predecessors have had occasion to announce the views of this nation in respect to such interference. On both occasions the remonstrance of the United States was respected, from a deep conviction, on the part of European governments, that the system of non-interference and mutual abstinence of propagandism was the true rule for the two hemispheres. Since those times we have advanced in wealth and power; but we retain the same purpose to leave the nations of Europe to choose their own dynasties and form their own systems of government. This consistent moderation may justly demand a corresponding moderation. We should regard it as a great calamity to ourselves, to the cause of good government, and to the peace of the world, should any

European Power challenge the American people, as it were, to the defence of republicanism against foreign interference. We cannot foresee and are unwilling to consider what opportunities might present themselves, what combinations might offer to protect ourselves against designs inimical to our form of government. The United States desire to act in the future as they have ever acted heretofore; they never will be driven from that course but by the aggression of European Powers; and we rely on the wisdom and justice of those Powers to respect the system of non-interference which has so long been sanctioned by time, and which, by its good results, has approved itself to both continents.

The correspondence between the United States and France, in reference to questions which have become subjects of discussion between the two governments, will, at a proper time, be laid before Congress.

When, on the organization of our Government, under the Constitution, the President of the United States delivered his inaugural address to the two Houses of Congress, he said to them, and through them to the country and to mankind, that "the preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered as deeply, perhaps as finally staked on the experiment intrusted to the American people." And the House of Representatives answered Washington by the voice of Madison: "We adore the invisible hand which has led the American people through so many difficulties, to cherish a conscious responsibility for the destiny of republican liberty." More than seventy-six years have glided away since these words were spoken; the United States have passed through severer trials than were foreseen; and now, at this new epoch of our existence as one nation, with our Union purified by sorrows, and strengthened by conflict, and established by the virtue of the people, the greatness of the occasion invites us once more to repeat, with solemnity, the pledges of our fathers to hold ourselves answerable before our fellow-men for the success of the republican form of government. Experience has proved its sufficiency in peace and in war; it has vindicated its authority through dangers and afflictions, and sudden and terrible emergencies, which would have crushed any system that had been less firmly fixed in the heart of the people.

At the inauguration of Washington the foreign relations of the country were few, and its trade was repressed by hostile regulations; now all the civilized nations of the globe welcome our commerce, and their Governments profess toward us amity. Then our country felt its way hesitatingly along an untried path, with States so little bound together by rapid means of communication as to be hardly known to one another, and with historic traditions extending over very few years; now intercourse between the States is swift and intimate; the experience of centuries has been crowded into a few generations, and has created an intense, indestructible nationality. Then our jurisdiction did not reach beyond the inconvenient boundaries of the territory which had achieved independence; now through cessions of lands, first colonized by Spain and France, the country has acquired a more complex character, and has for its natural limits the chain of lakes, the Gulf of Mexico, and on the east and west the two great oceans. Other nations were wasted by civil wars for ages before they could establish for themselves the necessary degree of unity; the latent conviction that our form of government is the best ever known to the world, has enabled us to emerge from civil war within four years, with a complete vindication of the constitutional authority of the General Government, and with our local liberties and State institutions unimpaired.

The throngs of emigrants that crowd to our shores are witnesses of the confidence of all people in our permanence. Here is the great land of free labor, where industry is blessed with unexampled rewards.

and the bread of the workingman is sweetened by the consciousness that the cause of the country "is his own cause, his own safety, his own dignity." Here every one enjoys the free use of his faculties and the choice of activity as a natural right. Here, under the combined influence of a fruitful soil, genial climes, and happy institutions, population has increased fifteen-fold within a century. Here, through the easy development of boundless resources, wealth has increased with two-fold greater rapidity than numbers, so that we have become secure against the financial vicissitudes of other countries, and, alike in business and in opinion, are self-centred and truly independent. Here more and more care is given to provide education for every one born on our soil. Here religion, released from political connection with the civil government, refuses to subserve the craft of statesmen, and becomes, in its independence, the spiritual life of the people. Here toleration is extended to every opinion, in the quiet certainty that truth needs only a fair field to secure the victory. Here the human mind goes forth unshackled in the pursuit of science, to collect stores of knowledge and acquire an ever-increasing mastery over the forces of Nature. Here the national domain is offered and held in millions of separate freeholds, so that our fellow-citizens, beyond the occupants of any other part of the earth, constitute in reality a people. Here exists the democratic form of government; and that form of government, by the confession of European statesmen, "gives a power of which no other form is capable, because it incorporates every man with the State, and arouses every thing that belongs to the soul."

Where, in past history, does a parallel exist to the public happiness which is within the reach of the people of the United States? Where, in any part of the globe, can institutions be found so suited to their habits or so entitled to their love as their own free Constitution? Every one of them, then, in whatever part of the land he has his home, must wish its perpetuity. Who of them will not now acknowledge, in the words of Washington, that "every step by which the people of the United States have advanced to the character of an independent nation, seems to have been distinguished by some token of Providential agency"? Who will not join with me in the prayer, that the invisible hand which has led us through the clouds that gloomed around our path, will so guide us onward to a perfect restoration of fraternal affection, that we of this day may be able to transmit our great inheritance of State governments in all their rights, of the General Government in its whole constitutional vigor, to our posterity, and they to theirs through countless generations?

ANDREW JOHNSON.

Washington, Dec. 4, 1865.

Message of JEFFERSON DAVIS to the Congress at Richmond, March 13, 1865.

To the Senate and House of Representatives of the Confederate States of America:

When informed on Thursday last that it was the intention of Congress to adjourn *sine die* on the ensuing Saturday, I deemed it my duty to request a postponement of the adjournment, in order that I might submit, for your consideration, certain matters of public interest, which are now laid before you. When that request was made, the most important measures that had occupied your attention during the session had not been so far advanced as to be submitted for Executive action, and the state of the country had been so materially affected by the events of the last four months as to evince the necessity of further and more energetic legislation than was contemplated in November last.

Our country is now environed with perils which it is our duty calmly to contemplate. Thus alone

can the measures necessary to avert threatened calamities be wisely devised and efficiently enforced.

Recent military operations of the enemy have been successful in the capture of some of our seaports, in interrupting some of our lines of communication, and in devastating large districts of our country. These events have had the natural effect of encouraging our foes and dispiriting many of our people. The capital of the Confederate States is now threatened, and is in greater danger than it has heretofore been during the war. The fact is stated without reserve or concealment, as due to the people whose servants we are, and in whose courage and constancy entire trust is reposed; as due to you, in whose wisdom and resolute spirit the people have confided for the adoption of the measures required to guard them from threatened perils.

While stating to you that our country is in danger, I desire also to state my deliberate conviction that it is within our power to avert the calamities which menace us, and to secure the triumph of the sacred cause for which so much sacrifice has been made, so much suffering endured, so many precious lives have been lost. This result is to be obtained by fortitude, by courage, by constancy in enduring the sacrifices still needed; in a word, by the prompt and resolute devotion of the whole resources of men and money in the Confederacy to the achievement of our liberties and independence.

The measures now required, to be successful, should be prompt. Long deliberation and protracted debate over important measures are not only natural, but laudable, in representative assemblies under ordinary circumstances; but in moments of danger, when action becomes urgent, the delay thus caused is itself a new source of peril. Thus it has unfortunately happened that some of the measures passed by you in pursuance of the recommendations contained in my message of November last, have been so retarded as to lose much of their value, or have, for the same reason, been abandoned after being matured, because no longer applicable to our altered condition; and others have not been brought under examination. In making these remarks, it is far from my intention to attribute the loss of time to any other causes than those inherent in deliberative assemblies, but only urgently to recommend prompt action upon the measures now submitted.

We need, for carrying on the war successfully, men and supplies for the army. We have both within our country sufficient to attain success.

To obtain the supplies it is necessary to protect productive districts, guard our lines of communication by an increase in the number of our forces; and hence it results, that with a large augmentation in the number of men in the army, the facility of supplying the troops would be greater than with our recent reduced strength.

For the purchase of supplies now required, especially for the armies in Virginia and North Carolina, the treasury must be provided with means, and a modification in the impressment law is required. It has been ascertained, by examination, that we have within our reach a sufficiency of what is most needed for the army, and without having recourse to the ample provision existing in those parts of the Confederacy with which our communication has been partially interrupted by hostile operations. But in some districts from which supplies are to be drawn the inhabitants, being either within the enemy's lines or in very close proximity, are unable to make use of Confederate treasury notes for the purchase of articles of prime necessity; and it is necessary that, to some extent, coin be paid, in order to obtain supplies. It is therefore recommended that Congress devise the means for making available the coin within the Confederacy for the purpose of supplying the army. The officers of the supply departments report that, with two millions of dollars in coin, the armies in Virginia and North Carolina can be amply

supplied for the remainder of the year; and the knowledge of this fact should suffice to insure the adoption of the measures necessary to obtain this moderate sum.

The impressment law, as it now exists, prohibits the public officers from impressing supplies without making payment of the valuation at the time of impressment. The limit fixed for the issue of treasury notes has been nearly reached, and the Treasury cannot easily furnish the funds necessary for prompt payment; while the law for raising revenue, which would have afforded means for diminishing, if not removing, this difficulty, was unfortunately delayed for several months, and has just been signed. In this condition of things it is impossible to supply the army, although ample stores may exist in the country, whenever the owners refuse to give credit to the public officer. It is necessary that this restriction on the power of impressment be removed. The power is admitted to be objectionable, liable to abuse, and unequal in its operation on individuals; yet all these objections must yield to absolute necessity. It is also suggested that the system of valuation now established ought to be radically changed. The legislation requires, in such cases of impressment, that the market price be paid; but there is really no market price in many cases, and then valuation is made arbitrarily and in a depreciated currency. The result is, that the most extravagant prices are fixed, such as no one expects ever to be paid in coin. None believe that the Government can ever redeem in coin the obligation to pay fifty dollars a bushel for corn, or seven hundred dollars a barrel for flour. It would seem to be more just and appropriate to estimate the supplies impressed at their value in coin, to give the obligation of the Government for the payment of the price in coin, with reasonable interest; or, at the option of the creditor, to return in kind the wheat and corn impressed, with a reasonable interest, also payable in kind; and to make the obligations thus issued receivable for all payments due in coin to the Government. Whatever be the value attached by Congress to these suggestions, it is hoped that there will be no hesitation in so changing the law as to render it possible to supply the army in case of necessity for the impressment of provisions for that purpose.

The measure adopted to raise revenue, though liberal in its provisions, being clearly inadequate to meet the arrear of debt and current expenditures, some degree of embarrassment in the management of the finances must continue to be felt. It is to be regretted, I think, that the recommendation of the Secretary of the Treasury, of a tax on agricultural income equal to the augmented tax on other incomes, payable in treasury notes, was rejected by Congress. This tax would have contributed materially to facilitate the purchase of provisions and diminish the necessity that is now felt for a supply of corn.

The measures passed by Congress during the session for recruiting the army and supplying the additional force needed for the public defence have been, in my judgment, insufficient, and I am impelled by a profound conviction of duty, and stimulated by a sense of the perils which surround our country, to urge upon you additional legislation upon this subject.

The bill for employing negroes for soldiers has not yet reached me, though the printed journals of your proceedings inform me of its passage. Much benefit is anticipated from this measure, though far less than would have resulted from its adoption at an earlier date, so as to afford time for their organization and instruction during the winter months.

The bill for diminishing the number of exemptions has just been made the subject of a special message, and its provisions are such as would add no strength to the army. The recommendation to abolish all class exemptions has not met your favor, although

still deemed by me a valuable and important measure; and the number of men exempted by a new clause in the act thus passed is believed to be quite equal to that of those whose exemption is revoked. A law of a few lines repealing all class exemptions would not only strengthen the forces in the field, but be still more beneficial by abating the natural discontent and jealousy created in the army by the existence of classes privileged by law to remain in places of safety while their fellow-citizens are exposed in the trenches and the field.

The measure most needed, however, at the present time, for affording an effective increase to our military strength, is a general militia law, such as the Constitution authorizes Congress to pass by granting to it power "to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the Confederate States," and the further power "to provide for calling forth the militia to execute the laws of the Confederate States, suppress insurrections, and repel invasions." The necessity for the exercise of this power can never exist if not in the circumstances that now surround us. The security of the States against any encroachment by the Confederate Government is amply provided for by the Constitution, by "reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress."

A law is needed to prescribe not only how, and of what persons, the militia are to be organized, but to provide the mode of calling them out. If instances be required to show the necessity of such general law, it is sufficient to mention that, in one case, I have been informed by the governor of a State that the law does not permit him to call the militia from one county for service in another; so that a single brigade of the enemy could traverse the State, and devastate each county in turn, without any power on the part of the Executive to use the militia for effective defence; while in another State the Executive refused to allow the militia "to be employed in the service of the Confederate States," in the absence of a law for that purpose.

I have heretofore, in a confidential message to the two Houses, stated the facts which induced me to consider it necessary that the privilege of the writ of *habeas corpus* should be suspended. The conviction of the necessity of this measure has become deeper as the events of the struggle have been developed. Congress has not concurred with me in opinion. It is my duty to say that the time has arrived when the suspension of the writ is not simply advisable and expedient, but almost indispensable to the successful conduct of the war. On Congress must rest the responsibility of declining to exercise a power conferred by the Constitution as a means of public safety, to be used in periods of national peril resulting from foreign invasion. If our present circumstances are not such as were contemplated when this power was conferred, I confess myself at a loss to imagine any contingency in which this clause of the Constitution will not remain a dead letter.

With the prompt adoption of the measures above recommended, and the united and hearty cooperation of Congress and the people in the execution of the laws and defence of the country, we may enter upon the present campaign with cheerful confidence in the result. And who can doubt the continued existence of that spirit and fortitude in the people, and of that constancy under reverses which alone are needed to render our triumph secure? What other resource remains available but the undying, unconquerable resolve to be free? It has become certain, beyond all doubt or question, that we must continue this struggle to a successful issue, or must make abject and unconditional submission to such terms as it shall please the conqueror to impose on us after our surrender. If a possible doubt could exist after the

conference between our commissioners and Mr. Lincoln, as recently reported to you, it would be dispelled by a recent occurrence, of which it is proper you should be informed.

Congress will remember that, in the conference above referred to, our commissioners were informed that the Government of the United States would not enter into any agreement or treaty whatever with the Confederate States, nor with any single State; and that the only possible mode of obtaining peace was by laying down our arms, disbanding our forces, and yielding unconditional obedience to the laws of the United States, including those passed for the confiscation of our property and the constitutional amendment for the abolition of slavery. It will further be remembered that Mr. Lincoln declared that the only terms on which hostilities could cease were those stated in his message of December last, in which we were informed, that in the event of our penitent submission, he would temper justice with mercy, and that the question whether we would be governed as dependent territories, or permitted to have a representation in their Congress, was one on which he could promise nothing, but which would be decided by their Congress after our submission had been accepted.

It has not, however, been hitherto stated to you that in the course of the conference at Fortress Monroe, a suggestion was made by one of our commissioners that the objections entertained by Mr. Lincoln to treating with the Government of the Confederacy, or with any separate State, might be avoided by substituting for the usual mode of negotiating through commissioners, or other diplomatic agents, the method sometimes employed, of a military convention, to be entered into by the commanding generals of the armies of the two belligerents. This, he admitted, was a power possessed by him, though it was not thought commensurate with all the questions involved. As he did not accept the suggestion when made, he was afterwards requested to reconsider his conclusion upon the subject of a suspension of hostilities, which he agreed to do, but said that he had maturely considered of the plan, and had determined that it could not be done.

Subsequently, however, an interview with General Longstreet was asked for by General Ord, commanding the enemy's Army of the James, during which General Longstreet was informed by him that there was a possibility of arriving at a satisfactory adjustment of the present unhappy difficulties by means of a military convention, and that if General Lee desired an interview on the subject it would not be declined, provided General Lee had authority to act. This communication was supposed to be the consequence of the suggestion referred to, and General Lee, according to instructions, wrote to General Grant, on the 2d of this month, proposing to meet him for conference on the subject, and stating that he was vested with the requisite authority. General Grant's reply stated that he had no authority to accede to the proposed conference; that his powers extended only to making a convention on subjects purely of a military character, and that General Ord could only have meant that an interview would not be refused on any subject on which he (General Grant) had the right to act.

It thus appears that neither with the Confederate authorities, nor the authorities of any State, nor through the commanding generals, will the Government of the United States treat or make any terms or agreement whatever for the cessation of hostilities. There remains then for us no choice but to continue this contest to a final issue; for the people of the Confederacy can be but little known to him who supposes it possible they would ever consent to purchase, at the cost of degradation and slavery, permission to live in a country garrisoned by their own negroes and governed by officers sent by the conqueror to rule over them.

Having thus fully placed before you the information requisite to enable you to judge of the state of the country, the dangers to which we are exposed, and the measures of legislation needed for averting them, it remains for me but to invoke your attention to the consideration of those means by which, above all others, we may hope to escape the calamities that would result from our failure. Prominent, above all others, is the necessity for earnest and cordial co-operation between all departments of government, State and Confederate, and all eminent citizens throughout the Confederacy. To you especially, as Senators and Representatives, do the people look for encouragement and counsel. To your action, not only in legislative halls, but in your homes, will their eyes be turned for the example of what is befitting men who, by willing sacrifices on the altar of freedom, show that they are worthy to enjoy its blessings. I feel full confidence that you will concur with me in the conviction that your public duties will not be ended when you shall have closed the legislative labors of the session, but that your voice will be heard cheering and encouraging the people to that persistent fortitude which they have hitherto displayed, and animating them by the manifestation of that serene confidence which, in moments of public danger, is the distinctive characteristic of the patriot, who derives courage from his devotion to his country's destiny, and is thus enabled to inspire the like courage in others.

Thus united in a common and holy cause, rising above all selfish considerations, rendering all our means and faculties tributary to the country's welfare, let us bow submissively to the Divine will, and reverently invoke the blessing of our Heavenly Father, that as He protected and guided our sires when struggling in a similar cause, so He will enable us to guard safely our altars and firesides, and maintain inviolate the political rights which we inherited.

JEFFERSON DAVIS.

RICHMOND, March 18, 1865.

Report of Lieutenant-General U. S. GRANT, of the operations of the Armies of the United States during the years 1864-'65.

HEADQUARTERS ARMIES OF THE UNITED STATES, }
WASHINGTON, D. C., July 22, 1865. }

SIR: I have the honor to submit the following report of the operations of the armies of the United States from the date of my appointment to command the same:

From an early period in the rebellion I had been impressed with the idea that active and continuous operations of all the troops that could be brought into the field, regardless of season and weather, were necessary to a speedy termination of the war. The resources of the enemy and his numerical strength were far inferior to ours; but as an offset to this, we had a vast territory with a population hostile to the Government, to garrison, and long lines of river and railroad communications to protect, to enable us to supply the operating armies.

The armies in the East and West acted independently and without concert, like a balky team, no two ever pulling together, enabling the enemy to use to great advantage his interior lines of communication for transporting troops from East to West, reinforcing the army most vigorously pressed, and to furnish large numbers, during seasons of inactivity on our part, to go to their homes and do the work of producing for the support of their armies. It was a question whether our numerical strength and resources were not more than balanced by these disadvantages and the enemy's superior position.

From the first, I was firm in the conviction that no peace could be had that would be stable and conducive to the happiness of the people, both North

and South, until the military power of the rebellion was entirely broken.

I therefore determined, first, to use the greatest number of troops practicable against the armed force of the enemy; preventing him from using the same force at different seasons against first one and then another of our armies, and the possibility of repose for refitting and producing necessary supplies for carrying on resistance. Second, to hammer continuously against the armed force of the enemy and his resources, until by mere attrition, if in no other way, there should be nothing left to him but an equal submission with the loyal section of our common country to the Constitution and laws of the land.

These views have been kept constantly in mind, and orders given and campaigns made to carry them out. Whether they might have been better in conception and execution is for the people, who mourn the loss of friends fallen, and who have to pay the pecuniary cost, to say. All I can say is, that what I have done has been done conscientiously, to the best of my ability, and in what I conceived to be for the best interests of the whole country.

At the date when this report begins the situation of the contending forces was about as follows: The Mississippi River was strongly garrisoned by Federal troops from St. Louis, Missouri, to its mouth. The line of the Arkansas was also held, thus giving us armed possession of all west of the Mississippi, north of that stream. A few points in southern Louisiana, not remote from the river, were held by us, together with a small garrison at and near the mouth of the Rio Grande. All the balance of the vast territory of Arkansas, Louisiana, and Texas, was in the almost undisputed possession of the enemy, with an army of probably not less than 60,000 effective men that could have been brought into the field had there been sufficient opposition to have brought them out. The *let-alone policy* had demoralized this force so much that probably little more than one-half of it was ever present in garrison at any one time. But the one-half, or 40,000 men, with the bands of guerrillas scattered through Missouri, Arkansas, and along the Mississippi River, and the disloyal character of much of the population, compelled the use of a large number of troops to keep navigation open on the river, and to protect the loyal people to the west of it. To the east of the Mississippi we held substantially with the line of the Tennessee and Holston Rivers, running eastward to include nearly all of the State of Tennessee. South of Chattanooga a small foothold had been obtained in Georgia, sufficient to protect East Tennessee from incursions from the enemy's force at Dalton, Georgia. West Virginia was substantially within our lines. Virginia, with the exception of the northern border, the Potomac River, a small area about the mouth of James River covered by the troops of Norfolk and Fort Monroe, and the territory covered by the Army of the Potomac lying along the Rapidan, was in the possession of the enemy. Along the sea-coast footholds had been obtained at Plymouth, Washington, and Newbern, in North Carolina; Beaufort, Folly and Morris Islands, Hilton Head, Fort Pulaski, and Port Royal, in South Carolina; Fernandina and St. Augustine, in Florida. Key West and Pensacola were also in our possession, while all the important ports were blockaded by the navy. The accompanying map, a copy of which was sent to General Sherman and other commanders in March, 1864, shows by red lines the territory occupied by us at the beginning of the rebellion and at the opening of the campaign of 1864, while those in blue are the lines which it was proposed to occupy.

Behind the Union lines there were many bands of guerrillas and a large population disloyal to the Government, making it necessary to guard every foot of road or river used in supplying our armies. In the South a reign of military despotism prevailed, which made every man and boy capable of bearing arms a

soldier, and those who could not bear arms in the field acted as provosts for collecting deserters and returning them. This enabled the enemy to bring almost his entire strength into the field.

The enemy had concentrated the bulk of his forces east of the Mississippi into two armies, commanded by Generals R. E. Lee and J. E. Johnston, his ablest and best generals. The army commanded by Lee occupied the south bank of the Rapidan, extending from Mine Run westward, strongly intrenched, covering and defending Richmond, the rebel capital, against the Army of the Potomac. The army under Johnston occupied a strongly intrenched position at Dalton, Georgia, covering and defending Atlanta, Georgia, a place of great importance as a railroad centre, against the armies under Major-General W. T. Sherman. In addition to these armies, he had a large cavalry force under Forrest, in northeast Mississippi; a considerable force, of all arms, in the Shenandoah Valley, and in the western part of Virginia and extreme eastern part of Tennessee; and also confronting our sea-coast garrisons, and holding blockaded ports where we had no foothold upon land.

These two armies, and the cities covered and defended by them, were the main objective points of the campaign.

Major-General W. T. Sherman, who was appointed to the command of the Military Division of the Mississippi, embracing all the armies and territory east of the Mississippi River to the Alleghenies, and the Department of Arkansas, west of the Mississippi, had the immediate command of the armies operating against Johnston.

Major-General George G. Meade had the immediate command of the Army of the Potomac, from where I exercised general supervision of the movements of all our armies.

General Sherman was instructed to move against Johnston's army, to break it up, and to go into the interior of the enemy's country as far as he could, inflicting all the damage he could upon their war resources. If the enemy in his front showed signs of joining Lee, to follow him up to the full extent of his ability, while I would prevent the concentration of Lee upon him if it was in the power of the Army of the Potomac to do so. More specific written instructions were not given, for the reason that I had talked over with him the plans of the campaign, and was satisfied that he understood them and would execute them to the fullest extent possible.

Major-General N. P. Banks, then on an expedition up Red River against Shreveport, Louisiana (which had been organized previous to my appointment to command), was notified by me on the 15th of March, of the importance it was that Shreveport should be taken at the earliest possible day, and that if he found that the taking of it would occupy from ten to fifteen days' more time than General Sherman had given his troops to be absent from their command, he would send them back at the time specified by General Sherman, even if it led to the abandonment of the main object of the Red River expedition, for this force was necessary to movements east of the Mississippi; that should his expedition prove successful, he would hold Shreveport and the Red River with such force as he might deem necessary, and return the balance of his troops to the neighborhood of New Orleans, commencing no move for the further acquisition of territory unless it was to make that then held by him more easily held; that it might be a part of the spring campaign to move against Mobile; that it certainly would be if troops enough could be obtained to make it without embarrassing other movements; that New Orleans would be the point of departure for such an expedition; also, that I had directed General Steele to make a real move from Arkansas, as suggested by him (General Banks), instead of a demonstration, as Steele thought advisable.

On the 31st of March, in addition to the foregoing notification and directions, he was instructed as follows:

1st. If successful in your expedition against Shreveport, that you turn over the defence of the Red River to General Steele and the navy.

2d. That you abandon Texas entirely with the exception of your hold upon the Rio Grande. This can be held with four thousand men, if they will turn their attention immediately to fortifying their positions. At least one-half of the force required for this service might be taken from the colored troops.

3d. By properly fortifying on the Mississippi River, the force to guard it from Port Hudson to New Orleans can be reduced to ten thousand men, if not to a less number. Six thousand more would then hold all the rest of the territory necessary to hold until active operations can again be resumed west of the river. According to your last return this would give you a force of over thirty thousand effective men with which to move against Mobile. To this I expect to add five thousand men from Missouri. If, however, you think the force here stated too small to hold the territory regarded as necessary to hold possession of, I would say concentrate at least twenty-five thousand men of your present command for operations against Mobile. With these and such additions as I can give you from elsewhere, lose no time in making a demonstration, to be followed by an attack upon Mobile. Two or more iron-clads will be ordered to report to Admiral Farragut. This gives him a strong naval fleet with which to cooperate. You can make your own arrangements with the Admiral for his cooperation, and select your own line of approach. My own idea of the matter is that Pascagoula should be your base, but, from your long service in the Gulf Department, you will know best about the matter. It is intended that your movements shall be cooperative with movements elsewhere, and you cannot now start too soon. All I would now add is, that you commence the concentration of your forces at once. Preserve a profound secrecy of what you intend doing, and start at the earliest possible moment.

U. S. GRANT, Lieutenant-General.

Major-General N. P. BANKS.

Major-General Meade was instructed that Lee's army would be his objective point; that wherever Lee went he would go also. For his movement two plans presented themselves: One to cross the Rapidan below Lee, moving by his right flank; the other above, moving by his left. Each presented advantages over the other, with corresponding objections. By crossing above, Lee would be cut off from all chance of ignoring Richmond or going north on a raid. But if we took this route, all we did would have to be done whilst the rations we started with held out; besides, it separated us from Butler, so that he could not be directed how to cooperate. If we took the other route, Brandy Station could be used as a base of supplies until another was secured on the York or James Rivers. Of these, however, it was decided to take the lower route.

The following letter of instruction was addressed to Major-General B. F. Butler:

FORT MONROE, VA., April 2, 1864.

GENERAL: In the spring campaign, which it is desirable shall commence at as early a day as practicable, it is proposed to have cooperative action of all the armies in the field, as far as this object can be accomplished.

It will not be possible to unite our armies into two or three large ones to act as so many units, owing to the absolute necessity of holding on to the territory already taken from the enemy. But, generally speaking, concentration can be practically effected by armies moving to the interior of the enemy's country from the territory they have to guard. By such movement they interpose themselves between the enemy and the country to be guarded, thereby reducing the number necessary to guard important points, or at least occupy the attention of a part of the enemy's force, if no greater object is gained. Lee's army and Richmond being the greater objects toward which our attention must be directed in the next campaign, it is desirable to unite all the force we can against them. The necessity of covering Washington with the Army of the Potomac, and of covering your department with your army, makes it impossible to unite these forces at the beginning of any move. I propose, therefore, what comes nearest this of any thing that seems practicable: The Army of the Potomac will act from its present base, Lee's army being the objective point. You will collect all the forces from your command that can be spared for garrison duty—I should say not less than twenty thousand

effective men—to operate on the south side of James River, Richmond being your objective point. To the force you already have will be added about ten thousand men from South Carolina, under Major-General Gillmore, who will command them in person. Major-General W. F. Smith is ordered to report to you, to command the troops sent into the field from your own department.

General Gillmore will be ordered to report to you at Fortress Monroe, with all the troops on transports, by the 18th instant, or as soon thereafter as practicable. Should you not receive notice by that time to move, you will make such disposition of them and your other forces as you may deem best calculated to deceive the enemy as to the real move to be made.

When you are notified to move, take City Point with as much force as possible. Fortify, or rather intrench, at once, and concentrate all your troops for the field there as rapidly as you can. From City Point directions cannot be given at this time for your further movements.

The fact that has already been stated—that is, that Richmond is to be your objective point, and that there is to be cooperation between your force and the Army of the Potomac—must be your guide. This indicates the necessity of your holding close to the south bank of the James River as you advance. Then, should the enemy be forced into his intrenchments in Richmond, the Army of the Potomac would follow, and by means of transports the two armies would become a unit.

All the minor details of your advance are left entirely to your direction. If, however, you think it practicable to use your cavalry south of you so as to cut the railroad about Hick's Ford about the time of the general advance, it would be of immense advantage.

You will please forward for my information, at the earliest practicable day, all orders, details, and instructions you may give for the execution of this order.

U. S. GRANT, Lieutenant-General.

Major-General B. F. BUTLER.

On the 16th, these instructions were substantially reiterated. On the 19th, in order to secure full cooperation between his army and that of General Meade, he was informed that I expected him to move from Fort Monroe the same day that General Meade moved from Culpepper. The exact time I was to telegraph him as soon as it was fixed, and that it would not be earlier than the 27th of April; that it was my intention to fight Lee between Culpepper and Richmond if he would stand. Should he, however, fall back into Richmond, I would follow up and make a junction with his (General Butler's) army on the James River; that, could I be certain he would be able to invest Richmond on the south side so as to have his left resting on the James, above the city, I would form the junction there; that circumstances might make this course advisable anyhow; that he should use every exertion to secure footing as far up the south side of the river as he could, and as soon as possible after the receipt of orders to move; that if he could not carry the city, he should at least detain as large a force as possible.

In cooperation with the main movements against Lee and Johnston, I was desirous of using all other troops necessarily kept in departments remote from the fields of immediate operations, and also those kept in the background for the protection of our extended lines between the loyal States and the armies operating against them.

A very considerable force, under command of Major-General Sigel, was so held for the protection of West Virginia, and the frontiers of Maryland and Pennsylvania. Whilst these troops could not be withdrawn to distant fields without exposing the North to invasion by comparatively small bodies of the enemy, they could act directly to their front and give better protection than if lying idle in garrison. By such movement they would either compel the enemy to detach largely for the protection of his supplies and lines of communication, or he would lose them. General Sigel was therefore directed to organize all his available force into two expeditions, to move from Beverly and Charleston, under command of Generals Ord and Crook, against the East Tennessee and Virginia Railroad. Subsequently, General Ord having been relieved at his own request, General Sigel was instructed, at his own suggestion,

to give up the expedition by Beverly, and to form two columns, one under General Crook, on the Kanawha, numbering about ten thousand men, and one on the Shenandoah, numbering about seven thousand men. The one on the Shenandoah to assemble between Cumberland and the Shenandoah, and the infantry and artillery advance to Cedar Creek with such cavalry as could be made available at the moment, to threaten the enemy in the Shenandoah Valley, and advance as far as possible; while General Crook would take possession of Lewisburg with part of his force and move down the Tennessee Railroad, doing as much damage as he could, destroying the New River bridge and salt works, at Saltville, Va.

Owing to the weather and bad condition of the roads, operations were delayed until the 1st of May, when, every thing being in readiness and the roads favorable, orders were given for a general movement of all the armies not later than the 4th of May.

My first object being to break the military power of the rebellion and capture the enemy's important strongholds, made me desirous that General Butler should succeed in his movement against Richmond, as that would tend more than any thing else, unless it were the capture of Lee's army, to accomplish this desired result in the East. If it failed, it was my determination, by hard fighting, either to compel Lee to retreat or to so cripple him that he could not detach a large force to go north and still retain enough for the defence of Richmond. It was well understood, by both Generals Butler and Meade, before starting on the campaign, that it was my intention to put both their armies south of the James River, in case of failure to destroy Lee without it.

Before giving General Butler his instructions, I visited him at Fort Monroe, and in conversation pointed out the apparent importance of getting possession of Petersburg and destroying railroad communication as far south as possible. Believing, however, in the practicability of capturing Richmond unless it was reinforced, I made that the objective point of his operations. As the Army of the Potomac was to move simultaneously with him, Lee could not detach from his army with safety, and the enemy did not have troops elsewhere to bring to the defence of the city in time to meet a rapid movement from the north of James River.

I may here state that, commanding all the armies as I did, I tried, as far as possible, to leave General Meade in independent command of the Army of the Potomac. My instructions for that army were all through him, and were general in their nature, leaving all the details and the execution to him. The campaigns that followed proved him to be the right man in the right place. His commanding always in the presence of an officer superior to him in rank, has drawn from him much of that public attention that his zeal and ability entitle him to, and which he would otherwise have received.

The movement of the Army of the Potomac commenced early on the morning of the 4th of May, under the immediate direction and orders of Major-General Meade, pursuant to instructions. Before night the whole army was across the Rapidan (the Fifth and Sixth Corps crossing at Germania Ford, and the Second Corps at United States Ford, the cavalry, under Major-General Sheridan, moving in advance), with the greater part of its trains, numbering about 4,000 wagons, meeting with but slight opposition. The average distance travelled by the troops that day was about twelve miles. This I regarded as a great success, and it removed from my mind the most serious apprehensions I had entertained, that of crossing the river in the face of an active, large, well-appointed, and ably-commanded army, and how so large a train was to be carried through a hostile country and protected. Early on the 5th, the advance corps (the Fifth, Major-General G. K. Warren commanding) met and engaged the enemy outside his intrenchments near Mine Run. The battle raged

furiously all day, the whole army being brought into the fight as fast as the corps could be got upon the field, which, considering the density of the forest and narrowness of the roads, was done with commendable promptness.

General Burnside, with the Ninth Corps, was, at the time the Army of the Potomac moved, left with the bulk of his corps at the crossing of the Rappahannock River and Alexandria Railroad, holding the road back to Bull Run, with instructions not to move until he received notice that a crossing of the Rapidan was secured, but to move promptly as soon as such notice was received. This crossing he was apprised of on the afternoon of the 4th. By six o'clock of the morning of the 6th, he was leading his corps into action near the Wilderness tavern, some of his troops having marched a distance of over thirty miles, crossing both the Rappahannock and Rapidan Rivers. Considering that a large proportion, probably two-thirds of his command, was composed of new troops, unaccustomed to marches and carrying the accoutrements of a soldier, this was a remarkable march.

The battle of the Wilderness was renewed by us at five o'clock on the morning of the 6th, and continued with unabated fury until darkness set in, each army holding substantially the same position that they had on the evening of the 5th. After dark, the enemy made a feeble attempt to turn our right flank, capturing several hundred prisoners, and creating considerable confusion. But the promptness of General Sedgwick, who was personally present and commanding that part of our line, soon reformed it and restored order. On the morning of the 7th, reconnoissances showed that the enemy had fallen behind his intrenched lines, with pickets to the front, covering a part of the battle-field. From this it was evident to my mind that the two days' fighting had satisfied him of his inability to further maintain the contest in the open field, notwithstanding his advantage of position, and that he would wait an attack behind his works. I therefore determined to push on and put my whole force between him and Richmond; and orders were at once issued for a movement by his right flank. On the night of the 7th the march was commenced toward Spottsylvania Court-House, the Fifth Corps moving on the most direct road. But the enemy having become apprised of our movement, and having the shorter line, was enabled to reach there first. On the 8th, General Warren met a force of the enemy, which had been sent out to oppose and delay his advance, to gain time to fortify the line taken up at Spottsylvania. This force was steadily driven back on the main force, within the recently constructed works, after considerable fighting, resulting in severe loss to both sides. On the morning of the 9th, General Sheridan started on a raid against the enemy's lines of communication with Richmond. The 9th, 10th, and 11th were spent in manoeuvring and fighting, without decisive results. Among the killed on the 9th was that able and distinguished soldier Major-General John Sedgwick, commanding the Sixth Army Corps. Major-General H. G. Wright succeeded him in command. Early on the morning of the 12th, a general attack was made on the enemy in position. The Second Corps, Major-General Hancock commanding, carried a salient of his line, capturing most of Johnston's division of Ewell's Corps and twenty pieces of artillery. But the resistance was so obstinate that the advantage gained did not prove decisive. The 13th, 14th, 15th, 16th, 17th, and 18th were consumed in manoeuvring and awaiting the arrival of reinforcements from Washington. Deeming it impracticable to make any further attack upon the enemy at Spottsylvania Court-House, orders were issued on the 18th with a view to a movement to the North Anna, to commence at 12 o'clock on the night of the 19th. Late in the afternoon of the 19th, Ewell's Corps came out of its works on our extreme right flank; but the attack was promptly repulsed, with heavy loss. This delayed the movement to the North

Anna until the night of the 21st, when it was commenced. But the enemy again having the shorter line, and being in possession of the main roads, was enabled to reach the North Anna in advance of us, and took position behind it. The Fifth Corps reached the North Anna on the afternoon of the 23d, closely followed by the Sixth Corps. The Second and Ninth Corps got up about the same time, the Second holding the railroad bridge and the Ninth lying between that and Jericho Ford. General Warren effected a crossing the same afternoon, and got a position without much opposition. Soon after getting into position he was violently attacked, but repulsed the enemy with great slaughter. On the 25th, General Sheridan rejoined the Army of the Potomac from the raid on which he started from Spottsylvania, having destroyed the depots at Beaver Dam and Ashland Stations, four trains of cars, large supplies of rations, and many miles of railroad track; recaptured about four hundred of our men on their way to Richmond as prisoners of war; met and defeated the enemy's cavalry at Yellow Tavern; carried the first line of works around Richmond (but finding the second line too strong to be carried by assault), recrossed to the north bank of the Chickahominy at Meadow's Bridge, under heavy fire, and moved by a détour to Haxall's landing, on the James River, where he communicated with General Butler. This raid had the effect of drawing off the whole of the enemy's cavalry force, and making it comparatively easy to guard our trains.

General Butler moved his main force up the James River, in pursuance of instructions, on the 4th of May, General Gillmore having joined with the Tenth Corps. At the same time he sent a force of 1,800 cavalry, by way of West Point, to form a junction with him wherever he might get a foothold, and a force of 3,000 cavalry, under General Kautz, from Suffolk, to operate against the road south of Petersburg and Richmond. On the 5th he occupied, without opposition, both City Point and Bermuda Hundred, his movement being a complete surprise. On the 6th he was in position with his main army, and commenced intrenching. On the 7th he made a reconnaissance against the Petersburg and Richmond Railroad, destroying a portion of it after some fighting. On the 9th he telegraphed as follows:

HEADQUARTERS NEAR BERMUDA LANDING, May 9, 1864.

Our operations may be summed up in a few words. With 1,700 cavalry we have advanced up the Peninsula, forced the Chickahominy, and have safely brought them to our present position. These were colored cavalry, and are now holding our advance pickets toward Richmond.

General Kautz, with 3,000 cavalry from Suffolk, on the same day with our movement up James River, forced the Blackwater, burned the railroad bridge at Stony Creek, below Petersburg, cutting in two Beauregard's force at that point.

We have landed here, intrenched ourselves, destroyed many miles of railroad, and got a position which, with proper supplies, we can hold out against the whole of Lee's army. I have ordered up the supplies.

Beauregard, with a large portion of his force, was left South by the cutting of the railroads by Kautz. That portion which reached Petersburg under Hill I have whipped to-day, killing and wounding many and taking many prisoners, after a severe and well-contested fight.

General Grant will not be troubled with any further reinforcements to Lee from Beauregard's force.

BENJAMIN F. BUTLER, Major-General.

Hon. E. M. STANTON, Secretary of War.

On the evening of the 13th and morning of the 14th he carried a portion of the enemy's first line of defence at Drury's Bluff, or Fort Darling, with small loss. The time thus consumed from the 6th lost to us the benefit of the surprise and capture of Richmond and Petersburg, enabling, as it did, Beauregard to collect his loose forces in North and South Carolina and bring them to the defence of those places. On the 16th the enemy attacked General Butler in his position in front of Drury's Bluff. He was forced back, or drew back, into his intrenchments between the forks of the James and Appomattox Rivers, the

enemy intrenching strongly in his front, thus covering his railroads, the city, and all that was valuable to him. His army, therefore, though in a position of great security, was as completely shut off from further operations directly against Richmond as if it had been in a bottle strongly corked. It required but a comparatively small force of the enemy to hold it there.

On the 12th General Kautz with his cavalry was started on a raid against the Danville Railroad, which he struck at Coalfield, Powhatan, and Chola Stations, destroying them, the railroad track, two freight trains, and one locomotive, together with large quantities of commissary and other stores; thence crossing to the South Side road, struck it at Wilson's, Wellsville, and Black and White Stations, destroying the road and station-houses; thence he proceeded to City Point, which he reached on the 18th.

On the 19th of April, and prior to the movement of General Butler, the enemy with a land force under General Hoke and an iron-clad ram, attacked Plymouth, N. C., commanded by General H. W. Wessels, and our gunboats there, and after severe fighting the place was carried by assault and the entire garrison and armament captured. The gunboat Smithfield was sunk and the Miami disabled.

The army sent to operate against Richmond having hermetically sealed itself up at Bermuda Hundred, the enemy was enabled to bring the most if not all the reinforcements brought from the South by Beauregard against the Army of the Potomac. In addition to this reinforcement, a very considerable one, probably not less than 15,000 men, was obtained by calling in the scattered troops under Breckinridge from the western part of Virginia.

The position at Bermuda Hundred was as easy to defend as it was difficult to operate from against the enemy. I determined, therefore, to bring from it all available forces, leaving enough only to secure what had been gained; and accordingly, on the 22d, I directed that they be sent forward, under command of Major-General W. F. Smith, to join the Army of the Potomac.

On the 24th of May the Ninth Army Corps, commanded by Major-General A. E. Burnside, was assigned to the Army of the Potomac, and from this time forward constituted a portion of Major-General Meade's command.

Finding the enemy's position on the North Anna stronger than either of his previous ones, I withdrew on the night of the 26th to the north bank of the North Anna, and moved *via* Hanover town to turn the enemy's position by his right.

Generals Torbert and Merritt's divisions of cavalry, under Sheridan, and the Sixth Corps led the advance; crossed the Pamunkey River at Hanover town after considerable fighting, and on the 28th the two divisions of cavalry had a severe but successful engagement with the enemy at Haw's shop. On the 29th and 30th we advanced, with heavy skirmishing, to the Hanover Court-House and Cold Harbor road, and developed the enemy's position north of the Chickahominy. Late on the evening of the last day the enemy came out and attacked our left, but was repulsed with very considerable loss. An attack was immediately ordered by General Meade along his whole line, which resulted in driving the enemy from a part of his intrenched skirmish line.

On the 31st General Wilson's division of cavalry destroyed the railroad bridges over the South Anna River, after defeating the enemy's cavalry. General Sheridan, on the same day, reached Cold Harbor, and held it until relieved by the Sixth Corps and General Smith's command, which had just arrived, *via* White House, from General Butler's army.

On the 1st day of June an attack was made at 5 p. m., by the Sixth Corps and the troops under General Smith, the other corps being held in readiness to advance on the receipt of orders. This resulted

in our carrying and holding the enemy's first line of works in front of the right of the Sixth Corps and in front of General Smith. During the attack the enemy made repeated assaults on each of the corps not engaged in the main attack, but were repulsed with heavy loss in every instance. That night he made several assaults to regain what he had lost in the day, but failed. The 2d was spent in getting troops into position for an attack on the 8d. On the 8d of June we again assaulted the enemy's works, in the hope of driving him from his position. In this attempt our loss was heavy, while that of the enemy, I have reason to believe, was comparatively light. It was the only general attack made from the Rapidan to the James which did not inflict upon the enemy losses to compensate for our own losses. I would not be understood as saying that all previous attacks resulted in victories to our arms, or accomplished as much as I had hoped from them; but they inflicted upon the enemy severe losses, which tended, in the end, to the complete overthrow of the rebellion.

From the proximity of the enemy to his defences around Richmond, it was impossible by any flank movement to interpose between him and the city. I was still in a condition to either move by his left flank and invest Richmond from the north side, or continue my move by his right flank to the south side of the James. While the former might have been better as a covering for Washington, yet a full survey of all the ground satisfied me that it would be impracticable to hold a line north and east of Richmond that would protect the Fredericksburg Railroad—a long, vulnerable line, which would exhaust much of our strength to guard, and that would have to be protected to supply the army, and would leave open to the enemy all his lines of communication on the south side of the James. My idea, from the start, had been to beat Lee's army north of Richmond if possible. Then, after destroying his lines of communication north of the James River, to transfer the army to the south side and besiege Lee in Richmond, or follow him south if he should retreat. After the battle of the Wilderness it was evident that the enemy deemed it of the first importance to run no risks with the army he then had. He acted purely on the defensive behind breastworks, or feebly on the offensive immediately in front of them, and where, in case of repulse, he could easily retire behind them. Without a greater sacrifice of life than I was willing to make, all could not be accomplished that I had designed north of Richmond; I therefore determined to continue to hold substantially the ground we then occupied, taking advantage of any favorable circumstances that might present themselves, until the cavalry could be sent to Charlottesville and Gordonsville to effectually break up the railroad connection between Richmond and the Shenandoah Valley and Lynchburg; and, when the cavalry got well off, to move the army to the south side of the James River, by the enemy's right flank, where I felt I could cut off all his sources of supply except by the canal.

On the 7th, two divisions of cavalry, under General Sheridan, got off on the expedition against the Virginia Central Railroad, with instructions to Hunter, whom I hoped he would meet near Charlottesville, to join his forces to Sheridan's, and after the work laid out for them was thoroughly done, to join the Army of the Potomac by the route laid down in Sheridan's instructions.

On the 10th of June, General Butler sent a force of infantry under General Gillmore, and cavalry under General Kautz, to capture Petersburg if possible, and destroy the railroad and common bridges across the Appomattox. The cavalry carried the works on the south side, and penetrated well toward the town, but were forced to retire. General Gillmore finding the works which he approached very strong, and deeming an assault impracticable, returned to Bermuda Hundred without attempting one.

Attaching great importance to the possession of

Petersburg, I sent back to Bermuda Hundred and City Point General Smith's command by water, via the White House, to reach there in advance of the Army of the Potomac. This was for the express purpose of securing Petersburg before the enemy, becoming aware of our intention, could reinforce the place.

The movement from Cold Harbor commenced after dark on the evening of the 12th; one division of cavalry, under General Wilson, and the Fifth Corps crossed the Chickahominy at Long Bridge, and moved out to White-Oak Swamp, to cover the crossings of the other corps. The advance corps reached James River, at Wilcox's Landing and Charles City Court-House, on the night of the 13th.

During three long years the Armies of the Potomac and Northern Virginia had been confronting each other. In that time they had fought more desperate battles than it probably ever before fell to the lot of two armies to fight, without materially changing the vantage ground of either. The Southern press and people, with more shrewdness than was displayed in the North, finding that they had failed to capture Washington and march on to New York, as they had boasted they would do, assumed that they only defended their capital and Southern territory. Hence, Antietam, Gettysburg, and all the other battles that had been fought, were by them set down as failures on our part, and victories for them. Their army believed this. It produced a morale which could only be overcome by desperate and continuous hard fighting. The battles of the Wilderness, Spottsylvania, North Anna, and Cold Harbor, bloody and terrible as they were on our side, were even more damaging to the enemy, and so crippled him as to make him wary ever after of taking the offensive. His losses in men were probably not so great, owing to the fact that we were, save in the Wilderness, almost invariably the attacking party; and when he did attack it was in the open field. The details of these battles, which for endurance and bravery on the part of the soldiery have rarely been surpassed, are given in the report of Major-General Meade, and the subordinate reports accompanying it.

During the campaign of forty-three days, from the Rapidan to the James River, the army had to be supplied from an ever-shifting base, by wagons, over narrow roads, through a densely-wooded country, with a lack of wharves at each new base from which to conveniently discharge vessels. Too much credit cannot therefore be awarded to the quartermaster and commissary departments for the zeal and efficiency displayed by them. Under the general supervision of the chief quartermaster, Brigadier-General R. Ingalls, the trains were made to occupy all the available roads between the army and our water base, and but little difficulty was experienced in protecting them.

The movement in the Kanawha and Shenandoah Valleys, under General Sigel, commenced on the first of May. General Crook, who had the immediate command of the Kanawha expedition, divided his forces into two columns, giving one, composed of cavalry, to General Averill. They crossed the mountains by separate routes. Averill struck the Tennessee and Virginia Railroad, near Wytheville, on the 10th, and proceeding to New River and Christiansburg, destroyed the road, several important bridges and depots, including New River Bridge, forming a junction with Crook at Union on the 15th. General Sigel moved up the Shenandoah Valley, met the enemy at New Market on the 15th, and, after a severe engagement, was defeated with heavy loss, and retired behind Cedar Creek. Not regarding the operations of General Sigel as satisfactory, I asked his removal from command, and Major-General Hunter was appointed to supersede him. His instructions were embraced in the following despatches to Major-General H. W. Halleck, chief of staff of the army:

NEAR SPOTTSYLVANIA COURT-HOUSE, VA., May 20, 1864.

The enemy are evidently relying for supplies greatly on such as are brought over the branch road running through Staunton. On the whole, therefore, I think it would be better for General Hunter to move in that direction; reach Staunton and Gordonsville or Charlottesville; if he does not meet too much opposition. If he can hold at bay a force equal to his own, he will be doing good service.

U. S. GRANT, Lieutenant-General.
Major-General H. W. HALLECK.

JERICHO FORD, VA., May 25, 1864.

If Hunter can possibly get to Charlottesville and Lynchburg, he should do so, living on the country. The railroads and canal should be destroyed beyond the possibility of repairs for weeks. Completing this, he could find his way back to his original base, or from about Gordonsville join this army.

U. S. GRANT, Lieutenant-General.
Major-General H. W. HALLECK.

General Hunter immediately took up the offensive, and moving up the Shenandoah Valley, met the enemy on the 5th of June at Piedmont, and after a battle of ten hours routed and defeated him, capturing on the field of battle 1,500 men, 8 pieces of artillery, and 300 stand of small-arms. On the 8th of the same month he formed a junction with Crook and Averill at Staunton, from which place he moved direct on Lynchburg, *via* Lexington, which place he reached and invested on the 16th day of June. Up to this time he was very successful, and but for the difficulty of taking with him sufficient ordnance stores over so long a march, through a hostile country, he would no doubt have captured that, to the enemy an important point. The destruction of the enemy's supplies and manufactories was very great. To meet this movement under General Hunter, General Lee sent a force, perhaps equal to a corps, a part of which reached Lynchburg a short time before Hunter. After some skirmishing on the 17th and 18th, General Hunter, owing to a want of ammunition to give battle, retired from before the place. Unfortunately, this want of ammunition left him no choice of route for his return but by way of Kanawha. This lost to us the use of his troops for several weeks from the defence of the North.

Had General Hunter moved by way of Charlottesville, instead of Lexington, as his instructions contemplated, he would have been in a position to have covered the Shenandoah Valley against the enemy, should the force he met have seemed to endanger it. If it did not, he would have been within easy distance of the James River Canal, on the main line of communication between Lynchburg and the force sent for its defence. I have never taken exception to the operations of General Hunter, and am not now disposed to find fault with him, for I have no doubt he acted within what he conceived to be the spirit of his instructions and the interests of the service. The promptitude of his movements and his gallantry should entitle him to the commendation of his country.

To return to the Army of the Potomac: The Second Corps commenced crossing the James River on the morning of the 14th by ferry-boats at Wilcox's Landing. The laying of the pontoon bridge was completed about midnight of the 14th, and the crossing of the balance of the army was rapidly pushed forward by both bridge and ferry.

After the crossing had commenced, I proceeded by steamer to Bermuda Hundred to give the necessary orders for the immediate capture of Petersburg.

The instructions to General Butler were verbal, and were for him to send General Smith immediately, that night, with all the troops he could give him without sacrificing the position he then held. I told him that I would return at once to the Army of the Potomac, hasten its crossing, and throw it forward to Petersburg by divisions as rapidly as it could be done; that we could reinforce our armies more rapidly there than the enemy could bring troops against us. General Smith got off as directed, and

confronted the enemy's pickets near Petersburg before daylight next morning, but for some reason, that I have never been able to satisfactorily understand, did not get ready to assault his main lines until near sundown. Then, with a part of his command only, he made the assault, and carried the lines northeast of Petersburg from the Appomattox River, for a distance of over two and a half miles, capturing fifteen pieces of artillery and three hundred prisoners. This was about 7 P.M. Between the line thus captured and Petersburg there were no other works, and there was no evidence that the enemy had reinforced Petersburg with a single brigade from any source. The night was clear—the moon shining brightly—and favorable to further operations. General Hancock, with two divisions of the Second Corps, reached General Smith just after dark, and offered the service of these troops as he (Smith) might wish, waiving rank to the named commander, whom he naturally supposed knew best the position of affairs, and what to do with the troops. But instead of taking these troops, and pushing at once into Petersburg, he requested General Hancock to relieve a part of his line in the captured works, which was done before midnight.

By the time I arrived the next morning the enemy was in force. An attack was ordered to be made at 6 o'clock that evening by the troops under Smith and the Second and Ninth Corps. It required until that time for the Ninth Corps to get up and into position. The attack was made as ordered, and the fighting continued with but little intermission until 6 o'clock the next morning, and resulted in our carrying the advance and some of the main works of the enemy to the right (our left) of those previously captured by General Smith, several pieces of artillery, and over four hundred prisoners.

The Fifth Corps having got up, the attacks were renewed and persisted in with great vigor on the 17th and 18th, but only resulted in forcing the enemy to an interior line, from which he could not be dislodged. The advantages in position gained by us were very great. The army then proceeded to envelop Petersburg toward the Southside Railroad, as far as possible without attacking fortifications.

On the 6th the enemy, to reinforce Petersburg, withdrew from a part of his intrenchment in front of Bermuda Hundred, expecting, no doubt, to get troops from north of the James to take the place of those withdrawn before we could discover it. General Butler, taking the advantage of this, at once moved a force on the railroad between Petersburg and Richmond. As soon as I was apprised of the advantage thus gained, to retain it I ordered two divisions of the Sixth Corps, General Wright commanding, that were embarking at Wilcox's Landing, under orders for City Point, to report to General Butler, at Bermuda Hundred, of which General Butler was notified, and the importance of holding a position in advance of his present line urged upon him.

About 2 o'clock in the afternoon General Butler was forced back to the line the enemy had withdrawn from in the morning. General Wright, with his two divisions, joined General Butler on the forenoon of the 17th, the latter still holding with a strong picket line the enemy's works. But instead of putting these divisions into the enemy's works to hold them, he permitted them to halt and rest some distance in the rear of his own line. Between 4 and 5 o'clock in the afternoon the enemy attacked and drove in his pickets and reoccupied his old line.

On the night of the 20th and morning of the 21st a lodgment was effected by General Butler, with one brigade of infantry, on the north bank of the James, at Deep Bottom, and connected the pontoon bridge with Bermuda Hundred.

On the 19th, General Sheridan, on his return from his expedition against the Virginia Central Railroad, arrived at the White House just as the enemy's cavalry was about to attack it, and compelled it to retire.

The result of this expedition was that General Sheridan met the enemy's cavalry near Trevillian Station, on the morning of the 11th of June, whom he attacked, and after an obstinate contest drove from the field in complete rout. He left his dead and nearly all his wounded in our hands, and about four hundred prisoners and several hundred horses. On the 12th he destroyed the railroad from Trevillian Station to Louisa Court-House. This occupied until 3 o'clock P. M., when he advanced in the direction of Gordonsville. He found the enemy reinforced by infantry, behind well-constructed rifle-pits, about five miles from the latter place, and too strong to successfully assault. On the extreme right, however, his reserve brigade carried the enemy's works twice, and was twice driven therefrom by infantry. Night closed the contest. Not having sufficient ammunition to continue the engagement, and his animals being without forage (the country furnishing but inferior grazing), and hearing nothing from General Hunter, he withdrew his command to the north side of the North Anna, and commenced his return march, reaching the White House at the time before stated. After breaking up the depot at that place he moved to the James River, which he reached safely after heavy fighting. He commenced crossing on the 25th, near Fort Powhatan, without further molestation, and rejoined the Army of the Potomac.

On the 23d, General Wilson, with his own division of cavalry of the Army of the Potomac, and General Kautz's division of cavalry of the Army of the James, moved against the enemy's railroads south of Richmond. Striking the Weldon Railroad at Ream's Station, destroying the depot and several miles of the road and the Southside road about fifteen miles from Petersburg, to near Nottaway Station, where he met and defeated a force of the enemy's cavalry, he reached Burkeville Station on the afternoon of the 23d, and from there destroyed the Danville Railroad to Roanoke bridge, a distance of twenty-five miles, where he found the enemy in force, and in a position from which he could not dislodge him. He then commenced his return march, and on the 28th met the enemy's cavalry in force at the Weldon Railroad crossing of Stony Creek, where he had a severe but not decisive engagement. Thence he made a détour from his left, with a view of reaching Ream's Station (supposing it to be in our possession). At this place he was met by the enemy's cavalry, supported by infantry, and forced to retire, with the loss of his artillery and trains. In this last encounter, General Kautz, with a part of his command, became separated, and made his way into our lines. General Wilson, with the remainder of his force, succeeded in crossing the Nottaway River and coming in safely on our left and rear. The damage to the enemy in this expedition more than compensated for the losses we sustained. It severed all connection by railroad with Richmond for several weeks.

With a view of cutting the enemy's railroad from near Richmond to the Anna Rivers and making him wary of the situation of his army in the Shenandoah, and, in the event of failure in this, to take advantage of his necessary withdrawal of troops from Petersburg, to explode a mine that had been prepared in front of the Ninth Corps and assault the enemy's lines at that place, on the night of the 26th of July the Second Corps and two divisions of the Cavalry corps and Kautz's cavalry were crossed to the north bank of the James River and joined the force General Butler had there. On the 27th the enemy was driven from his intrenched position, with the loss of four pieces of artillery. On the 28th our lines were extended from Deep Bottom to New Market road, but in getting this position were attacked by the enemy in heavy force. The fighting lasted for several hours, resulting in considerable loss on both sides. The first object of this move having failed, by reason of the very large force thrown there by the enemy, I determined to take advantage of the diversion made

by assaulting Petersburg before he could get his force back there. One division of the Second Corps was withdrawn on the night of the 28th, and moved during the night to the rear of the Eighteenth Corps, to relieve that corps in the line, that it might be foot loose in the assault to be made. The other two divisions of the Second Corps and Sheridan's cavalry were crossed over on the night of the 29th and moved in front of Petersburg. On the morning of the 30th, between four and five o'clock, the mine was sprung, blowing up a battery and most of a regiment, and the advance of the assaulting column, formed of the Ninth Corps, immediately took possession of the crater made by the explosion, and the line for some distance to the right and left of it, and a detached line in front of it, but for some cause failed to advance promptly to the ridge beyond. Had they done this, I have every reason to believe that Petersburg would have fallen. Other troops were immediately pushed forward, but the time consumed in getting them up enabled the enemy to rally from his surprise (which had been complete), and get forces to this point for its defence. The captured line thus held being untenable, and of no advantage to us, the troops were withdrawn, but not without heavy loss. Thus terminated in disaster what promised to be the most successful assault of the campaign.

Immediately upon the enemy's ascertaining that General Hunter was retreating from Lynchburg by way of the Kanawha River, thus laying the Shenandoah Valley open for raids into Maryland and Pennsylvania, he returned northward and moved down that valley. As soon as this movement of the enemy was ascertained, General Hunter, who had reached the Kanawha River, was directed to move his troops without delay, by river and railroad, to Harper's Ferry; but owing to the difficulty of navigation by reason of low water and breaks in the railroad, great delay was experienced in getting there. It became necessary, therefore, to find other troops to check this movement of the enemy. For this purpose the Sixth Corps was taken from the armies operating against Richmond, to which was added the Nineteenth Corps, then fortunately beginning to arrive in Hampton Roads from the Gulf Department, under orders issued immediately after the ascertainment of the result of the Red River expedition. The garrisons of Baltimore and Washington were at this time made up of heavy artillery regiments, hundred-days' men, and detachments from the invalid corps. One division under command of General Ricketts, of the Sixth Corps, was sent to Baltimore, and the remaining two divisions of the Sixth Corps, under General Wright, were subsequently sent to Washington. On the 8d of July the enemy approached Martinsburg; General Sigel, who was in command of our forces there, retreated across the Potomac at Shephardstown; and General Weber, commanding at Harper's Ferry, crossed the river, and occupied Maryland Heights. On the 6th the enemy occupied Hagerstown, moving in a strong column toward Frederick City. General Wallace with Ricketts' division and his own command, the latter mostly new and undisciplined troops, pushed out from Baltimore with great promptness, and met the enemy in force on the Monocacy, near the crossing of the railroad bridge. His force was not sufficient to insure success, but he fought the enemy nevertheless, and although it resulted in a defeat to our arms, yet it detained the enemy and thereby served to enable General Wright to reach Washington with two divisions of the Sixth Corps, and the advance of the Nineteenth Corps, before him. From Monocacy the enemy moved on Washington, his cavalry advance reaching Rockville on the evening of the 10th. On the 12th a reconnaissance was thrown out in front of Fort Stevens, to ascertain the enemy's position and force. A severe skirmish ensued, in which we lost about 280 in killed and wounded. The enemy's loss was probably greater. He commenced

retreating during the night. Learning the exact condition of affairs at Washington, I requested by telegraph at 11.45 p. m. on the 12th the assignment of Major-General H. G. Wright to the command of all the troops that could be made available to operate in the field against the enemy, and directed that he should get outside of the trenches with all the force he could, and push Early to the last moment. General Wright commenced the pursuit on the 18th; on the 18th the enemy was overtaken at Snicker's Ferry, on the Shenandoah, when a sharp skirmish occurred; and on the 20th General Averill encountered and defeated a portion of the rebel army at Winchester, capturing four pieces of artillery and several hundred prisoners.

Learning that Early was retreating south toward Lynchburg or Richmond, I directed that the Sixth and Nineteenth Corps be got back to the armies operating against Richmond, so that they might be used in a movement against Lee before the return of the troops sent by him into the valley; and that Hunter should remain in the Shenandoah Valley, keeping between any force of the enemy and Washington, acting on the defensive as much as possible. I felt that if the enemy had any notion of returning, the fact would be developed before the Sixth and Nineteenth Corps could leave Washington. Subsequently the Nineteenth Corps was excepted from the order to return to the James.

About the 25th it became evident that the enemy was again advancing upon Maryland and Pennsylvania, and the Sixth Corps, then at Washington, was ordered back to the vicinity of Harper's Ferry. The rebel force moved down the valley, and sent a raiding party into Pennsylvania, which, on the 30th, burned Chambersburg and then retreated, pursued by our cavalry toward Cumberland. They were met and defeated by General Kelly, and with diminished numbers escaped into the mountains of West Virginia. From the time of the first raid the telegraph wires were frequently down between Washington and City Point, making it necessary to transmit messages a part of the way by boat. It took from twenty-four to thirty-six hours to get despatches through and return answers back; so that often orders would be given, and then information would be received showing a different state of facts from those on which they were based, causing a confusion and apparent contradiction of orders that must have considerably embarrassed those who had to execute them, and rendered operations against the enemy less effective than they otherwise would have been. To remedy this evil, it was evident to my mind that some person should have the supreme command of all the forces in the Departments of West Virginia, Washington, Susquehanna, and the Middle Department, and I so recommended.

On the 2d of August I ordered General Sheridan to report in person to Major-General Halleck, chief of staff, at Washington, with a view to his assignment to the command of all the forces against Early. At this time the enemy was concentrated in the neighborhood of Winchester, while our forces, under General Hunter, were concentrated on the Monocacy, at the crossing of the Baltimore and Ohio Railroad, leaving open to the enemy Western Maryland and Southern Pennsylvania. From where I was I hesitated to give positive orders for the movement of our forces at Monocacy, lest by so doing I should expose Washington. Therefore, on the 4th I left City Point to visit Hunter's command, and determine for myself what was best to be done. On arrival there, and after consultation with General Hunter, I issued to him the following instructions:

MONOCACY BRIDGE, MD., August 5, 1864.—3 p. m.

GENERAL: Concentrate all your available force without delay in the vicinity of Harper's Ferry, leaving only such railroad guards and garrisons for public property as may be necessary. Use, in this concentrating, the railroads, if by so doing time can be saved. From Harper's Ferry, if it is found that the enemy has moved north of the Potomac in large

force, push north, following him and attacking him wherever found; follow him, if driven south of the Potomac, as long as it is safe to do so. If it is ascertained that the enemy has but a small force north of the Potomac, then push south, with the main force, detaching under a competent commander a sufficient force to look after the raiders, and drive them to their homes. In detaching such a force, the brigade of cavalry now *en route* from Washington *via* Rockville may be taken into account.

There are now on their way to join you three other brigades of the best cavalry, numbering at least 5,000 men and horses. These will be instructed, in the absence of further orders, to join you by the south side of the Potomac. One brigade will probably start to-morrow. In pushing up the Shenandoah Valley, where it is expected you will have to go first or last, it is desirable that nothing should be left to invite the enemy to return. Take all provisions, forage, and stock wanted for the use of your command; such as cannot be consumed, destroy. It is not desirable that the buildings should be destroyed—they should rather be protected; but the people should be informed that, so long as an army can subsist among them, recurrences of these raids must be expected, and we are determined to stop them at all hazards.

Bear in mind, the object is to drive the enemy south; and to do this, you want to keep him always in sight. Be guided in your course by the course he takes.

Make your own arrangements for supplies of all kinds, giving regular vouchers for such as may be taken from loyal citizens in the country through which you march.

U. S. GRANT, Lieutenant-General.

Major-General D. HUNTER.

The troops were immediately put in motion, and the advance reached Halton that night.

General Hunter having, in our conversation, expressed a willingness to be relieved from command, I telegraphed to have General Sheridan, then at Washington, sent to Harper's Ferry by the morning train, with orders to take general command of all the troops in the field, and to call on General Hunter at Monocacy, who would turn over to him my letter of instructions. I remained at Monocacy until General Sheridan arrived, on the morning of the 6th, and after a conference with him in relation to military affairs in that vicinity, I returned to City Point by way of Washington.

On the 7th of August the Middle Department and the Departments of West Virginia, Washington, and Susquehanna were constituted into the "Middle Military Division," and Major-General Sheridan was assigned to temporary command of the same.

Two divisions of cavalry, commanded by Generals Torbert and Wilson, were sent to Sheridan from the Army of the Potomac. The first reached him at Harper's Ferry about the 11th of August.

His operations during the month of August and the fore part of September were both of an offensive and defensive character, resulting in many severe skirmishes, principally by the cavalry, in which we were generally successful, but no general engagement took place. The two armies lay in such a position—the enemy on the west bank of the Opequan Creek covering Winchester, and our forces in front of Berryville—that either could bring on a battle at any time. Defeat to us would lay open to the enemy the States of Maryland and Pennsylvania for long distances before another army could be interposed to check him. Under these circumstances I hesitated about allowing the initiative to be taken. Finally, the use of the Baltimore and Ohio Railroad and the Chesapeake and Ohio Canal, which were both obstructed by the enemy, became so indispensably necessary to us, and the importance of relieving Pennsylvania and Maryland from continuously threatened invasion was so great, that I determined the risk should be taken. But fearing to telegraph the order for an attack without knowing more than I did of General Sheridan's feelings as to what would be the probable result, I left City Point on the 15th of September to visit him at his headquarters, to decide, after conference with him, what should be done. I met him at Charleston, and he pointed out so distinctly how each army lay; what he could do the moment he was authorized, and expressed such con-

sidence of success, that I saw there were but two words of instructions necessary—Go in! For the conveniences of forage, the teams for supplying the army were kept at Harper's Ferry. I asked him if he could get out his teams and supplies in time to make an attack on the ensuing Tuesday morning. His reply was, that he could before daylight on Monday. He was off promptly to time, and I may here add that the result was such that I have never since deemed it necessary to visit General Sheridan before giving him orders.

Early on the morning of the 19th General Sheridan attacked General Early at the crossing of the Opequan Creek, and after a most sanguinary and bloody battle, lasting until 5 o'clock in the evening, defeated him with heavy loss, carrying his entire position from Opequan Creek to Winchester, capturing several thousand prisoners and five pieces of artillery. The enemy rallied and made a stand in a strong position at Fisher's Hill, where he was attacked and again defeated with heavy loss on the 20th. Sheridan pursued him with great energy through Harrisonburg, Staunton, and the gaps of the Blue Ridge. After stripping the Upper Valley of most of the supplies and provisions for the rebel army, he returned to Strasburg, and took position on the north side of Cedar Creek.

Having received considerable reinforcements, General Early again returned to the Valley, and, on the 9th of October, his cavalry encountered ours near Strasburg, where the rebels were defeated, with the loss of eleven pieces of artillery and three hundred and fifty prisoners. On the night of the 18th the enemy crossed the mountains which separated the branches of the Shenandoah, forded the north fork, and early on the morning of the 19th, under cover of the darkness and the fog, surprised and turned our left flank, and captured the batteries which enfiladed our whole line. Our troops fell back with heavy loss and in much confusion, but were finally rallied between Middletown and Newtown. At this juncture General Sheridan, who was at Winchester when the battle commenced, arrived on the field, arranged his lines just in time to repulse a heavy attack of the enemy, and immediately assuming the offensive, he attacked in turn with great vigor. The enemy was defeated with great slaughter, and the loss of most of his artillery and trains and the trophies he had captured in the morning. The wreck of his army escaped during the night, and fled in the direction of Staunton and Lynchburg. Pursuit was made to Mount Jackson. Thus ended this, the enemy's last attempt to invade the North via the Shenandoah Valley. I was now enabled to return the Sixth Corps to the Army of the Potomac, and to send one division from Sheridan's army to the Army of the James, and another to Savannah, Georgia, to hold Sherman's new acquisitions on the sea-coast, and thus enable him to move without detaching from his force for that purpose.

Reports from various sources led me to believe that the enemy had detached three divisions from Petersburg to reinforce Early in the Shenandoah Valley. I therefore sent the Second Corps and Gregg's division of cavalry, of the Army of the Potomac, and a force of General Butler's army, on the night of the 18th of August, to threaten Richmond from the north side of the James, to prevent him from sending troops away, and, if possible, to draw back those sent. In this move we captured six pieces of artillery and several hundred prisoners, detained troops that were under marching orders, and ascertained that but one division (Kershaw's) of the three reputed detached, had gone.

The enemy having withdrawn heavily from Petersburg to resist this movement, the Fifth Corps, General Warren commanding, was moved out on the 18th and took possession of the Weldon Railroad. During the day he had considerable fighting. To regain possession of the road, the enemy made re-

peated and desperate assaults, but was each time repulsed with great loss. On the night of the 30th the troops on the north side of the James were withdrawn, and Hancock and Gregg returned to the front at Petersburg. On the 25th the Second Corps and Gregg's division of cavalry, while at Ream's Station destroying the railroad, were attacked, and after desperate fighting, a part of our line gave way, and five pieces of artillery fell into the hands of the enemy.

By the 12th of September a branch railroad was completed from the City Point and Petersburg Railroad to the Weldon Railroad, enabling us to supply, without difficulty, in all weather, the army in front of Petersburg.

The extension of our lines across the Weldon Railroad compelled the enemy to so extend his that it seemed he could have but few troops north of the James for the defence of Richmond. On the night of the 28th the Tenth Corps, Major-General Birney, and the Eighteenth Corps, Major-General Ord commanding, of General Butler's army, were crossed to the north side of the James, and advanced on the morning of the 29th, carrying the very strong fortifications and intrenchments below Chapin's Farm, known as Fort Harrison, capturing fifteen pieces of artillery, and the New Market road and intrenchments. This success was followed up by a gallant assault upon Fort Gillmore, immediately in front of the Chapin Farm fortifications, in which we were repulsed with heavy loss. Kautz's cavalry was pushed forward on the road to the right of this, supported by infantry, and reached the enemy's inner line, but was unable to get further. The position captured from the enemy was so threatening to Richmond that I determined to hold it. The enemy made several desperate attempts to dislodge us, all of which were unsuccessful, and for which he paid dearly. On the morning of the 30th General Meade sent out a reconnoissance, with a view to attacking the enemy's line if it was found sufficiently weakened by withdrawal of troops to the north side. In this reconnoissance we captured and held the enemy's works near Poplar Spring church. In the afternoon troops moving to get to the left of the point gained were attacked by the enemy in heavy force, and compelled to fall back until supported by the forces holding the captured works. Our cavalry under Gregg was also attacked, but repulsed the enemy with great loss.

On the 7th of October the enemy attacked Kautz's cavalry north of the James, and drove it back with heavy loss in killed, wounded, and prisoners, and the loss of all the artillery—eight or nine pieces. This he followed up by an attack on our intrenched infantry line, but was repulsed with severe slaughter. On the 13th a reconnoissance was sent out by General Butler, with a view to drive the enemy from some new works he was constructing, which resulted in a very heavy loss to us.

On the 27th the Army of the Potomac, leaving only sufficient men to hold its fortified line, moved by the enemy's right flank. The Second Corps, followed by two divisions of the Fifth Corps, with the cavalry in advance and covering our left flank, forced a passage of Hatcher's Run, and moved up the south side of it toward the South Side Railroad, until the Second Corps and part of the cavalry reached the Boydton plank road where it crosses Hatcher's Run. At this point we were six miles distant from the South Side Railroad, which I had hoped by this movement to reach and hold. But finding that we had not reached the end of the enemy's fortifications, and no place presenting itself for a successful assault by which he might be doubled up and shortened, I determined to withdraw to within our fortified line. Orders were given accordingly. Immediately upon receiving a report that General Warren had connected with General Hancock, I returned to my headquarters. Soon after I left, the enemy

moved out across Hatcher's Run, in the gap between Generals Hancock and Warren, which was not closed as reported, and made a desperate attack on General Hancock's right and rear. General Hancock immediately faced his corps to meet it, and after a bloody combat drove the enemy within his works, and withdrew that night to his old position.

In support of this movement General Butler made a demonstration on the north side of the James, and attacked the enemy on the Williamsburg road, and also on the York River Railroad. In the former he was unsuccessful; in the latter he succeeded in carrying a work which was afterwards abandoned, and his forces withdrawn to their former positions.

From this time forward the operations in front of Petersburg and Richmond, until the spring campaign of 1865, were confined to the defence and extension of our lines, and to offensive movements for crippling the enemy's lines of communication, and to prevent his detaching any considerable force to send south. By the 7th of February our lines were extended to Hatcher's Run, and the Weldon Railroad had been destroyed to Hicksford.

General Sherman moved from Chattanooga on the 6th of May, with the Armies of the Cumberland, Tennessee, and Ohio, commanded, respectively, by Generals Thomas, McPherson, and Schofield, upon Johnston's army at Dalton; but finding the enemy's positions at Buzzard Roost, covering Dalton, too strong to be assaulted, General McPherson was sent through Snake Gap to turn it, whilst Generals Thomas and Schofield threatened it in front and on the north. This movement was successful. Johnston, finding his retreat likely to be cut off, fell back to his fortified position at Resaca, where he was attacked on the afternoon of May 16th. A heavy battle ensued. During the night the enemy retreated south. Late on the 17th his rear guard was overtaken near Adairsville, and heavy skirmishing followed. The next morning, however, he had again disappeared. He was vigorously pursued, and was overtaken at Cassville on the 19th, but during the ensuing night retreated across the Etowah. Whilst these operations were going on, General Jefferson C. Davis's division of Thomas's army was sent to Rome, capturing it with its forts and artillery, and its valuable mills and foundries. General Sherman, having given his army a few days' rest at this point, again put it in motion on the 23d for Dallas, with a view of turning the difficult pass at Allatoona. On the afternoon of the 25th the advance under General Hooker had a severe battle with the enemy, driving him back to New Hope Church, near Dallas. Several sharp encounters occurred at this point. The most important was on the 28th, when the enemy assaulted General McPherson at Dallas, but received a terrible and bloody repulse.

On the 4th of June Johnston abandoned his entrenched position at New Hope Church, and retreated to the strong positions of Kenesaw, Pine, and Lost Mountains. He was forced to yield the two last-named places and concentrate his army on Kenesaw, where, on the 27th, Generals Thomas and McPherson made a determined but unsuccessful assault. On the night of the 2d of July Sherman commenced moving his army by the right flank, and on the morning of the 3d found that the enemy, in consequence of this movement, had abandoned Kenesaw and retreated across the Chattahoochee.

General Sherman remained on the Chattahoochee to give his men rest and get up stores until the 17th of July, when he resumed his operations, crossed the Chattahoochee, destroyed a large portion of the railroad to Augusta, and drove the enemy back to Atlanta. At this place General Hood succeeded General Johnston in command of the rebel army, and, assuming the offensive-defensive policy, made several severe attacks upon Sherman in the vicinity of Atlanta, the most desperate and determined of which was on the 22d of July. About 1 p. m. of this

day the brave, accomplished, and noble-hearted McPherson was killed. General Logan succeeded him, and commanded the Army of the Tennessee through this desperate battle, and until he was superseded by Major-General Howard, on the 26th, with the same success and ability that had characterized him in the command of a corps or division.

In all these attacks the enemy was repulsed with great loss. Finding it impossible to entirely invest the place, General Sherman, after securing his line of communications across the Chattahoochee, moved his main force round by the enemy's left flank upon the Montgomery and Macon roads, to draw the enemy from his fortifications. In this he succeeded, and, after defeating the enemy near Rough and Ready, Jonesboro', and Lovejoy's, forcing him to retreat to the south, on the 2d of September occupied Atlanta, the objective point of his campaign.

About the time of this move, the rebel cavalry, under Wheeler, attempted to cut his communications in the rear, but was repulsed at Dalton, and driven into East Tennessee, whence it proceeded west to McMinnville, Murfreesboro', and Franklin, and was finally driven south of the Tennessee. The damage done by this raid was repaired in a few days.

During the partial investment of Atlanta, General Rousseau joined General Sherman with a force of cavalry from Decatur, having made a successful raid upon the Atlanta and Montgomery Railroad, and its branches near Opelika. Cavalry raids were also made by Generals McCook, Garrard, and Stoneman, to cut the remaining railroad communication with Atlanta. The first two were successful—the latter disastrous.

General Sherman's movement from Chattanooga to Atlanta was prompt, skilful, and brilliant. The history of his flank movements and battles during that memorable campaign will ever be read with an interest unsurpassed by any thing in history.

His own report, and those of his subordinate commanders accompanying it, give the details of that most successful campaign.

He was dependent for the supply of his armies upon a single-track railroad from Nashville to the point where he was operating. This passed the entire distance through a hostile country, and every foot of it had to be protected by troops. The cavalry force of the enemy under Forrest, in Northern Mississippi, was evidently waiting for Sherman to advance far enough into the mountains of Georgia to make a retreat disastrous, to get upon his line and destroy it beyond the possibility of further use. To guard against this danger, Sherman left what he supposed to be a sufficient force to operate against Forrest in West Tennessee. He directed General Washburn, who commanded there, to send Brigadier-General S. D. Sturgis in command of this force to attack him. On the morning of the 10th of June General Sturgis met the enemy near Guntown, Mississippi, was badly beaten, and driven back in utter rout and confusion to Memphis, a distance of about one hundred miles, hotly pursued by the enemy. By this, however, the enemy was defeated in his designs upon Sherman's line of communications. The persistency with which he followed up this success exhausted him, and made a season for rest and repairs necessary. In the mean time Major-General A. J. Smith, with the troops of the Army of the Tennessee that had been sent by General Sherman to General Banks, arrived at Memphis on their return from Red River, where they had done most excellent service. He was directed by General Sherman to immediately take the offensive against Forrest. This he did with the promptness and effect which has characterized his whole military career. On the 14th of July he met the enemy at Tupelo, Mississippi, and whipped him badly. The fighting continued through three days. Our loss was small compared with that of the enemy. Having accomplished the object of his expedition, General Smith returned to Memphis.

During the months of March and April this same force under Forrest annoyed us considerably. On the 24th of March it captured Union City, Kentucky, and its garrison, and on the 24th attacked Paducah, commanded by Colonel S. G. Hicks, Fortieth Illinois Volunteers. Colonel H., having but a small force, withdrew to the forts near the river, from where he repulsed the enemy and drove him from the place.

On the 18th of April part of this force, under the rebel General Buford, summoned the garrison of Columbus, Kentucky, to surrender, but received for reply from Colonel Lawrence, Thirty-fourth New Jersey Volunteers, that, being placed there by his Government, with adequate force to hold his post and repel all enemies from it, surrender was out of the question.

On the morning of the same day Forrest attacked Fort Pillow, Tennessee, garrisoned by a detachment of Tennessee cavalry and the First Regiment Alabama colored troops, commanded by Major Booth. The garrison fought bravely until about 3 o'clock in the afternoon, when the enemy carried the works by assault; and, after our men threw down their arms, proceeded to an inhuman and merciless massacre of the garrison.

On the 14th, General Buford, having failed at Columbus, appeared before Paducah, but was again driven off.

Guerrillas and raiders, seemingly emboldened by Forrest's operations, were also very active in Kentucky. The most noted of these was Morgan. With a force of from two to three thousand cavalry he entered the State through Pound Gap in the latter part of May. On the 11th of June he attacked and captured Cynthiana, with its entire garrison. On the 12th he was overtaken by General Burbridge, and completely routed with heavy loss, and was finally driven out of the State. This notorious guerrilla was afterwards surprised and killed near Greenville, Tennessee, and his command captured and dispersed by General Gillem.

In the absence of official reports at the commencement of the Red River expedition, except so far as relates to the movements of the troops sent by General Sherman under A. J. Smith, I am unable to give the date of its starting. The troops under General Smith, comprising two divisions of the Sixteenth and a detachment of the Seventeenth Army Corps, left Vicksburg on the 10th of March and reached the designated point on Red River one day earlier than that appointed by General Banks. The rebel forces at Fort De Russey, thinking to defeat him, left the fort on the 14th to give him battle in the open field; but, while occupying the enemy with skirmishing and demonstrations, Smith pushed forward to Fort De Russey, which had been left with a weak garrison, and captured it with its garrison—about 850 men, 11 pieces of artillery, and many small-arms. Our loss was but slight. On the 15th he pushed forward to Alexandria, which place he reached on the 18th. On the 21st he had an engagement with the enemy at Henderson Hill, in which he defeated him, capturing 210 prisoners and 4 pieces of artillery.

On the 28th he again attacked and defeated the enemy under the rebel General Taylor, at Cane River. By the 26th General Banks had assembled his whole army at Alexandria and pushed forward to Grand Ecore. On the morning of April 6th he moved from Grand Ecore. On the afternoon of the 7th his advance engaged the enemy near Pleasant Hill and drove him from the field. On the same afternoon the enemy made a stand eight miles beyond Pleasant Hill, but was again compelled to retreat. On the 8th, at Sabine Cross-Roads and Peach Hill, the enemy attacked and defeated his advance, capturing nineteen pieces of artillery and an immense amount of transportation and stores. During the night General Banks fell back to Pleasant Hill, where another battle was fought on the 9th, and the enemy repulsed with great loss. During the night General Banks

continued his retrograde movement to Grand Ecore, and thence to Alexandria, which he reached on the 27th of April. Here a serious difficulty arose in getting Admiral Porter's fleet, which accompanied the expedition, over the rapids, the water having fallen so much since they passed up as to prevent their return. At the suggestion of Colonel (now Brigadier-General) Bailey, and under his superintendence, wing-dams were constructed, by which the channel was contracted so that the fleet passed down the rapids in safety.

The army evacuated Alexandria on the 14th of May, after considerable skirmishing with the enemy's advance, and reached Morganza and Point Coupée near the end of the month. The disastrous termination of this expedition, and the lateness of the season, rendered impracticable the carrying out of my plan of a movement in force sufficient to insure the capture of Mobile.

On the 23d of March, Major-General Steele left Little Rock with the Seventh Army Corps to coöperate with General Banks's expedition on Red River, and reached Arkadelphia on the 28th. On the 16th of April, after driving the enemy before him, he was joined, near Elkin's Ferry, in Washita County, by General Thayer, who had marched from Fort Smith. After several severe skirmishes, in which the enemy was defeated, General Steele reached Camden, which he occupied about the middle of April.

On learning the defeat and consequent retreat of General Banks on Red River, and the loss of one of his own trains at Mark's mill, in Dallas County, General Steele determined to fall back to the Arkansas River. He left Camden on the 26th of April, and reached Little Rock on the 2d of May. On the 30th of April, the enemy attacked him while crossing Saline River at Jenkins's Ferry, but was repulsed with considerable loss. Our loss was about 600 in killed, wounded, and prisoners.

Major-General Canby, who had been assigned to the command of the "Military Division of the West Mississippi," was therefore directed to send the Nineteenth Army Corps to join the armies operating against Richmond, and to limit the remainder of his command to such operations as might be necessary to hold the positions and lines of communications he then occupied.

Before starting General A. J. Smith's troops back to Sherman, General Canby sent a part of them to disperse a force of the enemy that was collecting near the Mississippi River. General Smith met and defeated this force near Lake Chicot on the 6th of June. Our loss was about forty killed and seventy wounded.

In the latter part of July General Canby sent Major-General Gordon Granger, with such forces as he could collect to coöperate with Admiral Farragut against the defences of Mobile Bay. On the 8th of August Fort Gaines surrendered to the combined naval and land forces. Fort Powell was blown up and abandoned.

On the 9th, Fort Morgan was invested, and, after a severe bombardment, surrendered on the 23d. The total captures amounted to 1,464 prisoners, and 104 pieces of artillery.

About the last of August, it being reported that the rebel General Price, with a force of about 10,000 men, had reached Jacksonport, on his way to invade Missouri, General A. J. Smith's command, then en route from Memphis to join Sherman, was ordered to Missouri. A cavalry force was also, at the same time, sent from Memphis, under command of Colonel Winslow. This made General Rosecrans's forces superior to those of Price, and no doubt was entertained he would be able to check Price and drive him back; while the forces under General Steele, in Arkansas, would cut off his retreat. On the 26th day of September Price attacked Pilot Knob and forced the garrison to retreat, and thence moved north to the Missouri River, and continued up that river toward Kansas. General Curtis, commanding department

of Kansas, immediately collected such forces as he could to repel the invasion of Kansas, while General Rosecrans's cavalry was operating in his rear.

The enemy was brought to battle on the Big Blue and defeated, with the loss of nearly all his artillery and trains and a large number of prisoners. He made a precipitate retreat to Northern Arkansas. The impunity with which Price was enabled to roam over the State of Missouri for a long time, and the incalculable mischief done by him, shows to how little purpose a superior force may be used. There is no reason why General Rosecrans should not have concentrated his forces, and beaten and driven Price before the latter reached Pilot Knob.

September 20th, the enemy's cavalry, under Forrest, crossed the Tennessee near Waterloo, Alabama, and on the 23d attacked the garrison at Athens, consisting of six hundred men, which capitulated on the 24th. Soon after the surrender two regiments of reinforcements arrived, and after a severe fight were compelled to surrender. Forrest destroyed the railroad westward, captured the garrison at Sulphur Branch trestle, skirmished with the garrison at Pulaski on the 27th, and on the same day cut the Nashville and Chattanooga Railroad near Tullahoma and Dechard. On the morning of the 30th one column of Forrest's command, under Buford, appeared before Huntsville, and summoned the surrender of the garrison. Receiving an answer in the negative, he remained in the vicinity of the place until next morning, when he again summoned its surrender, and received the same reply as on the night before. He withdrew in the direction of Athens, which place had been regarrisoned, and attacked it on the afternoon of the 1st of October, but without success. On the morning of the 2d he renewed his attack, but was handsomely repulsed.

Another column under Forrest appeared before Columbia on the morning of the 1st, but did not make an attack. On the morning of the 3d he moved toward Mount Pleasant. While these operations were going on, every exertion was made by General Thomas to destroy the forces under Forrest before he could recross the Tennessee, but was unable to prevent his escape to Corinth, Mississippi.

In September, an expedition under General Burbridge was sent to destroy the salt works at Saltville, Virginia. He met the enemy on the 2d of October, about three miles and a half from Saltville, and drove him into his strongly intrenched position around the salt works, from which he was unable to dislodge him. During the night he withdrew his command and returned to Kentucky.

General Sherman, immediately after the fall of Atlanta, put his armies in camp in and about the place, and made all preparations for refitting and supplying them for future service. The great length of road from Atlanta to the Cumberland River, however, which had to be guarded, allowed the troops but little rest.

During this time Jefferson Davis made a speech in Macon, Georgia, which was reported in the papers of the South, and soon became known to the whole country, disclosing the plans of the enemy, thus enabling General Sherman to fully meet them. He exhibited the weakness of supposing that an army that had been beaten and fearfully decimated in a vain attempt at the defensive, could successfully undertake the offensive against the army that had so often defeated it.

In execution of this plan, Hood, with his army, was soon reported to the southwest of Atlanta. Moving far to Sherman's right, he succeeded in reaching the railroad about Big Shanty, and moved north on it.

General Sherman, leaving a force to hold Atlanta, with the remainder of his army fell upon him and drove him to Gadston, Alabama. Seeing the constant annoyance he would have with the roads to his rear if he attempted to hold Atlanta, General Sher-

man proposed the abandonment and destruction of that place, with all the railroads leading to it, and telegraphed me as follows:

CENTREVILLE, GA., October 10—noon.

Despatch about Wilson just received. Hood is now crossing Coosa River, twelve miles below Rome, bound west. If he passes over the Mobile and Ohio road, had I not better execute the plan of my letter sent by Colonel Porter, and leave General Thomas, with the troops now in Tennessee, to defend the State? He will have an ample force when the reinforcements ordered reach Nashville.

W. T. SHERMAN, Major-General.

Lieutenant-General GRANT.

For a full understanding of the plan referred to in this despatch, I quote from the letter sent by Colonel Porter: "I will therefore give my opinion, that your army and Canby's should be reinforced to the maximum; that after you get Wilmington, you strike for Savannah and the river; that Canby be instructed to hold the Mississippi River, and send a force to get Columbus, Georgia, either by the way of the Alabama or the Appalachicola, and that I keep Hood employed and put my army in final order for a march on Augusta, Columbia, and Charleston, to be ready as soon as Wilmington is sealed as to commerce, and the city of Savannah is in our possession." This was in reply to a letter of mine of date September 12th, in answer to a despatch of his containing substantially the same proposition, and in which I informed him of a proposed movement against Wilmington, and of the situation in Virginia, etc.

CITY POINT, VA., October 11, 1864—11 A. M.

Your despatch of October 10th received. Does it not look as if Hood was going to attempt the invasion of Middle Tennessee, using the Mobile and Ohio and Memphis and Charleston roads to supply his base on the Tennessee River, about Florence or Decatur? If he does this, he ought to be met and prevented from getting north of the Tennessee River. If you were to cut loose, I do not believe you would meet Hood's army, but would be hushwhacked by all the old men and little boys, and such railroad guards as are still left at home. Hood would probably strike for Nashville, thinking that by going north he could inflict greater damage upon us than we could upon the rebels by going south. If there is any way of getting at Hood's army I would prefer that; but I must trust to your own judgment. I find I shall not be able to send a force from here to act with you on Savannah. Your movements, therefore, will be independent of mine; at least until the fall of Richmond takes place. I am afraid Thomas, with such lines of road as he has to protect, could not prevent Hood from going north. With Wilson turned loose, with all your cavalry, you will find the rebels put much more on the defensive than heretofore.

U. S. GRANT, Lieutenant-General.

Major-General W. T. SHERMAN.

KINGSTON, GA., October 11—11 A. M.

Hood moved his army from Palmetto Station across by Dallas and Cedartown, and is now on the Coosa River, south of Rome. He threw one corps on my road at Acworth, and I was forced to follow. I hold Atlanta with the Twentieth Corps, and have strong detachments along my line. This reduces my active force to a comparatively small army. We cannot remain here on the defensive. With the 25,000 men, and the bold cavalry he has, he can constantly break my roads. I would infinitely prefer to make a wreck of the road, and of the country from Chattanooga to Atlanta, including the latter city—send back all my wounded and worthless, and, with my effective army, move through Georgia, smashing things, to the sea. Hood may turn into Tennessee and Kentucky, but I believe he will be forced to follow me. Instead of my being on the defensive, I would be on the offensive; instead of guessing at what he means to do, he would have to guess at my plans. The difference in war is full twenty-five per cent. I can make Savannah, Charleston, or the mouth of the Chattahoochee.

Answer quick, as I know we will not have the telegraph long.

W. T. SHERMAN, Major-General.

Lieutenant-General GRANT.

CITY POINT, VA., October 11, 1864—11:30 P. M.

Your despatch of to-day received. If you are satisfied the trip to the sea-coast can be made, holding the line of the Tennessee River firmly, you may make it, destroying all the railroad south of Dalton or Chattanooga, as you think best.

U. S. GRANT, Lieutenant-General.

Major-General W. T. SHERMAN.

It was the original design to hold Atlanta, and by getting through to the coast, with a garrison left on the southern railroads, leading east and west, through Georgia, to effectually sever the east from the west. In other words, cut the would-be Confederacy in two again, as it had been cut once by our gaining possession of the Mississippi River. General Sherman's plan virtually effected this object.

General Sherman commenced at once his preparations for his proposed movement, keeping his army in position in the mean time to watch Hood. Becoming satisfied that Hood had moved westward from Gadsden across Sand Mountain, General Sherman sent the Fourth Corps, Major-General Stanley commanding, and the Twenty-third Corps, Major-General Schofield commanding, back to Chattanooga to report to Major-General Thomas, at Nashville, whom he had placed in command of all the troops of his military division, save the four army corps and cavalry division he designed to move with through Georgia. With the troops thus left at his disposal, there was little doubt that General Thomas could hold the line of the Tennessee, or in the event Hood should force it, would be able to concentrate and beat him in battle. It was therefore readily consented to that Sherman should start for the sea-coast.

Having concentrated his troops at Atlanta by the 14th of November, he commenced his march, threatening both Augusta and Macon. His coming-out point could not be definitely fixed. Having to gather his subsistence as he marched through the country, it was not impossible that a force inferior to his own might compel him to head for such point as he could reach, instead of such as he might prefer. The blindness of the enemy, however, in ignoring this movement, and sending Hood's army, the only considerable force he had west of Richmond and east of the Mississippi River, northward on an offensive campaign, left the whole country open, and Sherman's route to his own choice.

How that campaign was conducted, how little opposition was met with, the condition of the country through which the armies passed, the capture of Fort McAllister, on the Savannah River, and the occupation of Savannah on the 21st of December, are all clearly set forth in General Sherman's admirable report.

Soon after General Sherman commenced his march from Atlanta, two expeditions, one from Baton Rouge, Louisiana, and one from Vicksburg, Mississippi, were started by General Canby to cut the enemy's line of communication with Mobile and detain troops in that field. General Foster, commanding Department of the South, also sent an expedition, *via* Broad River, to destroy the railroad between Charleston and Savannah. The expedition from Vicksburg, under command of Brevet Brigadier-General E. D. Osband (Colonel Third United States colored cavalry), captured, on the 27th of November, and destroyed the Mississippi Central railroad bridge and trestle-work over Big Black River, near Canton, thirty miles of the road, and two locomotives, besides large amounts of stores. The expedition from Baton Rouge was without favorable results. The expedition from the Department of the South, under the immediate command of Brigadier-General John P. Hatch, consisting of about five thousand men of all arms, including a brigade from the navy, proceeded up Broad River and debarked at Boyd's Neck on the 29th of November, from where it moved to strike the railroad at Grahamsville. At Honey Hill, about three miles from Grahamsville, the enemy was found and attacked in a strongly fortified position, which resulted, after severe fighting, in our repulse with a loss of 746 in killed, wounded, and missing. During the night General Hatch withdrew. On the 6th of December General Foster obtained a position covering the Charleston and Savannah Railroad, between the Coosawatchie and Tallfinny Rivers.

Hood, instead of following Sherman, continued his

move northward, which seemed to me to be leading to his certain doom. At all events, had I had the power of commanding both armies, I should not have changed the orders under which he seemed to be acting. On the twenty-sixth of October the advance of Hood's army attacked the garrison at Decatur, Alabama, but failing to carry the place, withdrew toward Cortland, and succeeded, in the face of our cavalry, in effecting a lodgment on the north side of the Tennessee River, near Florence. On the 28th Forrest reached the Tennessee, at Fort Hieman, and captured a gunboat and three transports. On the second of November he planted batteries above and below Johnsonville, on the opposite side of the river, isolating three gunboats and eight transports. On the 4th the enemy opened his batteries upon the place, and was replied to from the gunboats and the garrison. The gunboats becoming disabled were set on fire, as also were the transports, to prevent their falling into the hands of the enemy. About a million and a half dollars' worth of stores and property on the levee and in storehouses was consumed by fire. On the fifth the enemy disappeared and crossed to the north side of the Tennessee River, above Johnsonville, moving toward Clifton, and subsequently joined Hood. On the night of the 5th General Schofield, with the advance of the Twenty-third Corps, reached Johnsonville, but finding the enemy gone, was ordered to Pulaski, and put in command of all the troops there, with instructions to watch the movements of Hood and retard his advance, but not to risk a general engagement until the arrival of General A. J. Smith's command from Missouri, and until General Wilson could get his cavalry remounted.

On the 19th General Hood continued his advance. General Thomas, retarding him as much as possible, fell back toward Nashville for the purpose of concentrating his command and gaining time for the arrival of reinforcements. The enemy coming up with our main force, commanded by General Schofield, at Franklin, on the 30th, assaulted our works repeatedly during the afternoon until late at night, but were in every instance repulsed. His loss in this battle was 1,750 killed, 702 prisoners, and 2,800 wounded. Among his losses were six general officers killed, six wounded, and one captured. Our entire loss was 2,800. This was the first serious opposition the enemy met with, and I am satisfied was the fatal blow to all his expectations. During the night General Schofield fell back toward Nashville. This left the field to the enemy—not lost by battle, but voluntarily abandoned—so that General Thomas's whole force might be brought together. The enemy followed up and commenced the establishment of his line in front of Nashville on the second of December.

As soon as it was ascertained that Hood was crossing the Tennessee River, and that Price was going out of Missouri, General Rosecrans was ordered to send to General Thomas the troops of General A. J. Smith's command and such other troops as he could spare. The advance of this reinforcement reached Nashville on the 30th November.

On the morning of the 15th December General Thomas attacked Hood in position, and, in a battle lasting two days, defeated and drove him from the field in the utmost confusion, leaving in our hands most of his artillery and many thousand prisoners, including four general officers.

Before the battle of Nashville I grew very impatient over, as it appeared to me, the unnecessary delay. This impatience was increased upon learning that the enemy had sent a force of cavalry across the Cumberland into Kentucky. I feared Hood would cross his whole army and give us great trouble there. After urging upon General Thomas the necessity of immediately assuming the offensive, I started west to superintend matters there in person. Reaching Washington City, I received General Thomas's despatch announcing his attack upon the enemy, and the result as far as the battle had progressed. I was

delighted. All fears and apprehensions were dispelled. I am not yet satisfied but that General Thomas, immediately upon the appearance of Hood before Nashville, and before he had time to fortify, should have moved out with his whole force and given him battle, instead of waiting to remount his cavalry, which delayed him until the inclemency of the weather made it impracticable to attack earlier than he did. But his final defeat of Hood was so complete that it will be accepted as a vindication of that distinguished officer's judgment.

After Hood's defeat at Nashville he retreated, closely pursued by cavalry and infantry, to the Tennessee River, being forced to abandon many pieces of artillery and most of his transportation. On the 23th of December our advance forces ascertained that he had made good his escape to the south side of the river.

About this time, the rains having set in heavily in Tennessee and North Alabama, making it difficult to move army transportation and artillery, General Thomas stopped the pursuit by his main force at the Tennessee River. A small force of cavalry, under Colonel W. J. Palmer, Fifteenth Pennsylvania Volunteers, continued to follow Hood for some distance, capturing considerable transportation and the enemy's pontoon bridge. The details of these operations will be found clearly set forth in General Thomas's report.

A cavalry expedition, under Brevet Major-General Grierson, started from Memphis on the 21st of December. On the 25th he surprised and captured Forrest's dismounted camp at Verona, Mississippi, on the Mobile and Ohio Railroad, destroyed the railroad, sixteen cars loaded with wagons and pontoons for Hood's army, 4,000 new English carbines, and large amounts of public stores. On the morning of the 28th he attacked and captured a force of the enemy at Egypt, and destroyed a train of fourteen cars; thence turning to the southwest, he struck the Mississippi Central Railroad at Winona, destroyed the factories and large amounts of stores at Bankston, and the machine shops and public property at Grenada, arriving at Vicksburg January 5th.

During these operations in Middle Tennessee, the enemy, with a force under General Breckinridge, entered East Tennessee. On the 18th of November, he attacked General Gillem, near Morristown, capturing his artillery and several hundred prisoners. Gillem, with what was left of his command, retreated to Knoxville. Following up his success, Breckinridge moved to near Knoxville, but withdrew on the 18th, followed by General Ammen. Under the directions of General Thomas, General Stoneman concentrated the commands of Generals Burbridge and Gillem near Bean's Station, to operate against Breckinridge, and destroy or drive him into Virginia—destroy the salt works at Saltville, and the railroad into Virginia as far as he could go without endangering his command. On the 12th of December he commenced his movement, capturing and dispersing the enemy's force wherever he met them. On the 16th he struck the enemy, under Vaughn, at Marion, completely routing and pursuing him to Wytheville, capturing all his artillery, trains, and one hundred and ninety-eight prisoners; and destroyed Wytheville, with its stores and supplies, and the extensive lead works near there. Returning to Marion, he met a force under Breckinridge, consisting, among other troops, of the garrison of Saltville, that had started in pursuit. He at once made arrangements to attack it the next morning; but morning found Breckinridge gone. He then moved directly to Saltville, and destroyed the extensive salt works at that place, a large amount of stores, and captured eight pieces of artillery. Having thus successfully executed his instructions, he returned General Burbridge to Lexington and General Gillem to Knoxville.

Wilmington, North Carolina, was the most important sea-coast port left to the enemy through which

to get supplies from abroad, and send cotton and other products out by blockade-runners, besides being a place of great strategic value. The navy had been making strenuous exertions to seal the harbor of Wilmington, but with only partial effect. The nature of the outlet of Cape Fear River was such that it required watching for so great a distance that, without possession of the land north of New Inlet, or Fort Fisher, it was impossible for the navy to entirely close the harbor against the entrance of blockade-runners.

To secure the possession of this land required the coöperation of a land force, which I agreed to furnish. I immediately commenced the assemblage in Hampton Roads, under Admiral D. D. Porter, of the most formidable armada ever collected for concentration upon one given point. This necessarily attracted the attention of the enemy, as well as that of the loyal North; and through the imprudence of the public press, and very likely of officers of both branches of service, the exact object of the expedition became a subject of common discussion in the newspapers both North and South. The enemy, thus warned, prepared to meet it. This caused a postponement of the expedition until the latter part of November, when, being again called upon by Hon. G. V. Fox, Assistant Secretary of the Navy, I agreed to furnish the men required at once, and went myself, in company with Major-General Butler, to Hampton Roads, where we had a conference with Admiral Porter as to the force required and the time of starting. A force of six thousand five hundred men was regarded as sufficient. The time of starting was not definitely arranged, but it was thought all would be ready by the 6th of December, if not before. Learning, on the 30th of November, that Bragg had gone to Georgia, taking with him most of the forces about Wilmington, I deemed it of the utmost importance that the expedition should reach its destination before the return of Bragg, and directed General Butler to make all arrangements for the departure of Major-General Weitzel, who had been designated to command the land forces, so that the navy might not be detained one moment.

On the 6th of December, the following instructions were given:

CITY POINT, VA., December 6, 1864.

GENERAL: The first object of the expedition under General Weitzel is to close to the enemy the port of Wilmington. If successful in this, the second will be to capture Wilmington itself. There are reasonable grounds to hope for success, if advantage can be taken of the absence of the greater part of the enemy's forces now looking after Sherman in Georgia. The directions you have given for the numbers and equipment of the expedition are all right, except in the unimportant matter of where they embark and the amount of intrenching tools to be taken. The object of the expedition will be gained by effecting a landing on the main land between Cape Fear River and the Atlantic, north of the north entrance to the river. Should such landing be effected whilst the enemy still holds Fort Fisher and the batteries guarding the entrance to the river, then the troops should intrench themselves, and, by coöperating with the navy, effect the reduction and capture of those places. These in our hands, the navy could enter the harbor, and the port of Wilmington could be sealed. Should Fort Fisher and the point of land on which it is built fall into the hands of our troops immediately on landing, then it will be worth the attempt to capture Wilmington by a forced march and surprise. If time is consumed in gaining the first object of the expedition, the second will become a matter of after consideration.

The details for execution are intrusted to you and the officer immediately in command of the troops.

Should the troops under General Weitzel fail to effect a landing at or near Fort Fisher, they will be returned to the armies operating against Richmond without delay.

U. S. GRANT, Lieutenant-General.

Major-General B. F. BUTLER.

General Butler, commanding the army from which the troops were taken for this enterprise, and the territory within which they were to operate, military courtesy required that all orders and instructions should go through him. They were so sent; but

General Weitzel has since officially informed me that he never received the foregoing instructions, nor was he aware of their existence until he read General Butler's published official report of the Fort Fisher failure, with my endorsement and papers accompanying it. I had no idea of General Butler's accompanying the expedition until the evening before it got off from Bermuda Hundred, and then did not dream but that General Weitzel had received all the instructions, and would be in command. I rather formed the idea that General Butler was actuated by a desire to witness the effect of the explosion of the powder-boat. The expedition was detained several days at Hampton Roads, awaiting the loading of the powder-boat.

The importance of getting the Wilmington expedition off without any delay, with or without the powder-boat, had been urged upon General Butler, and he advised to so notify Admiral Porter.

The expedition finally got off on the 13th of December, and arrived at the place of rendezvous, off New Inlet, near Fort Fisher, on the evening of the 15th. Admiral Porter arrived on the evening of the 18th, having put in at Beaufort to get ammunition for the monitors. The sea becoming rough, making it difficult to land troops, and the supply of water and coal being about exhausted, the transport fleet put back to Beaufort to replenish; this, with the state of the weather, delayed the return to the place of rendezvous until the 24th. The powder-boat was exploded on the morning of the 24th, before the return of General Butler from Beaufort; but it would seem, from the notice taken of it in the Southern newspapers, that the enemy were never enlightened as to the object of the explosion until they were informed by the Northern press.

On the 25th a landing was effected without opposition, and a reconnaissance, under Brevet Brigadier-General Curtis, pushed up toward the fort. But before receiving a full report of the result of this reconnaissance, General Butler, in direct violation of the instructions given, ordered the reembarkation of the troops and the return of the expedition. The reembarkation was accomplished by the morning of the 27th.

On the return of the expedition, officers and men—among them Brevet Major-General (then Brevet Brigadier-General) M. R. Curtis, First Lieutenant G. W. Ross, — regiment Vermont Volunteers, First Lieutenant George W. Walling, and Second Lieutenant George Simpson, One Hundred and Forty-second New York Volunteers—voluntarily reported to me that when recalled they were nearly into the fort, and, in their opinion, it could have been taken without much loss.

Soon after the return of the expedition, I received a despatch from the Secretary of the Navy, and a letter from Admiral Porter, informing me that the fleet was still off Fort Fisher, and expressing the conviction that, under a proper leader, the place could be taken. The natural supposition with me was, that when the troops abandoned the expedition the navy would do so also. Finding it had not, however, I answered on the 30th of December, advising Admiral Porter to hold on, and that I would send a force and make another attempt to take the place. This time I selected Brevet Major-General (now Major-General) A. H. Terry to command the expedition. The troops composing it consisted of the same that composed the former, with the addition of a small brigade, numbering about 1,500, and a small siege train. The latter it was never found necessary to land. I communicated direct to the commander of the expedition the following instructions:

CITY POINT, VA., January 3, 1865.

GENERAL: The expedition intrusted to your command has been fitted out to renew the attempt to capture Fort Fisher, N. C., and Wilmington ultimately, if the fort falls. You will then proceed with as little delay as possible to the naval fleet lying off Cape Fear River, and report the arrival

of yourself and command to Admiral D. D. Porter, commanding North Atlantic Blockading Squadron.

It is exceedingly desirable that the most complete understanding should exist between yourself and the naval commander. I suggest, therefore, that you consult with Admiral Porter freely, and get from him the part to be performed by each branch of the public service, so that there may be unity of action. It would be well to have the whole programme laid down in writing. I have served with Admiral Porter, and know that you can rely on his judgment and his nerve to undertake what he proposes. I would, therefore, defer to him as much as is consistent with your own responsibilities. The first object to be attained is to get a firm position on the spit of land on which Fort Fisher is built, from which you can operate against that fort. You want to look to the practicability of receiving your supplies, and to defending yourself against superior forces sent against you by any of the avenues left open to the enemy. If such a position can be obtained, the siege of Fort Fisher will not be abandoned until its reduction is accomplished, or another plan of campaign is ordered from these headquarters.

My own views are that, if you effect a landing, the navy ought to run a portion of their fleet into Cape Fear River, while the balance of it operates on the outside. Land forces cannot invest Fort Fisher, or cut it off from supplies or reinforcements, while the river is in the possession of the enemy.

A siege train will be loaded on vessels and sent to Fort Monroe, in readiness to be sent to you if required. All other supplies can be drawn from Beaufort as you need them.

Keep the fleet of vessels with you until your position is assured. When you find they can be spared, order them back, or such of them as you can spare, to Fort Monroe, to report for orders.

In case of failure to effect a landing, bring your command back to Beaufort, and report to these headquarters for further instructions. You will not debark at Beaufort until so directed.

General Sheridan has been ordered to send a division of troops to Baltimore, and place them on sea-going vessels. These troops will be brought to Fort Monroe and kept there on the vessels until you are heard from. Should you require them, they will be sent to you.

"U. S. GRANT, Lieutenant-General.

"Brevet Major-General A. H. TERRY."

Lieutenant-Colonel C. B. Comstock, aide-de-camp (now brevet brigadier-general), who accompanied the former expedition, was assigned in orders as chief engineer to this.

It will be seen that these instructions did not differ materially from those given for the first expedition; and that in neither instance was there an order to assault Fort Fisher. This was a matter left entirely to the discretion of the commanding officer.

The expedition sailed from Fort Monroe on the morning of the 6th, arriving on the rendezvous, off Beaufort, on the 8th, where, owing to the difficulties of the weather, it lay until the morning of the 12th, when it got under way and reached its destination that evening. Under cover of the fleet the disembarkation of the troops commenced on the morning of the 13th, and by 3 o'clock P. M. was completed without loss. On the 14th a reconnaissance was pushed to within five hundred yards of Fort Fisher, and a small advance work taken possession of and turned into a defensive line against any attempt that might be made from the fort. This reconnaissance disclosed the fact that the front of the work had been seriously injured by the navy fire. In the afternoon of the 15th the fort was assaulted, and after most desperate fighting was captured, with its entire garrison and armament. Thus was secured, by the combined efforts of the navy and army, one of the most important successes of the war. Our loss was: killed, one hundred and ten; wounded, five hundred and thirty-six. On the 16th and 17th the enemy abandoned and blew up Fort Caswell and the works on Smith's Island, which were immediately occupied by us. This gave us entire control of the mouth of the Cape Fear River.

At my request, Major-General B. F. Butler was relieved, and Major-General E. O. C. Ord assigned to the command of the Department of Virginia and North Carolina.

The defence of the line of the Tennessee no longer

requiring the force which had beaten and nearly destroyed the only army threatening it, I determined to find other fields of operation for General Thomas's surplus troops—fields from which they would cooperate with other movements. General Thomas was therefore directed to collect all troops, not essential to hold his communications at Eastport, in readiness for orders. On the 7th of January General Thomas was directed, if he was assured of the departure of Hood south from Corinth, to send General Schofield with his corps east with as little delay as possible. This direction was promptly complied with, and the advance of the corps reached Washington on the 23d of the same month, whence it was sent to Fort Fisher and Newbern. On the 26th he was directed to send General A. J. Smith's command and a division of cavalry to report to General Canby. By the 7th of February the whole force was *en route* for its destination.

The State of North Carolina was constituted into a military department, and General Schofield assigned to command, and placed under the orders of Major-General Sherman. The following instructions were given him:

CITY POINT, VA., January 31, 1865.
GENERAL: * * * Your movements are intended as cooperative with Sherman through the States of South and North Carolina. The first point to be attained is to secure Wilmington. Goldsboro' will then be your objective point, moving either from Wilmington or Newbern, or both, as you deem best. Should you not be able to reach Goldsboro', you will advance on the line or lines of railway connecting that place with the sea-coast—as near to it as you can, building the road behind you. The enterprise under you has two objects: the first is to give General Sherman material aid, if needed, in his march north; the second, to open a base of supplies for him on his line of march. As soon, therefore, as you can determine which of the two points, Wilmington or Newbern, you can best use for throwing supplies from to the interior, you will commence the accumulation of twenty days' rations and forage for 60,000 men and 20,000 animals. You will get of these as many as you can house and protect to such point in the interior as you may be able to occupy. I believe General Palmer has received some instructions direct from General Sherman on the subject of securing supplies for his army. You can learn what steps he has taken, and be governed in your requisitions accordingly. A supply of ordnance stores will also be necessary.

Make all requisitions upon the chiefs of their respective departments in the field with me at City Point. Communicate with me by every opportunity; and should you deem it necessary at any time, send a special boat to Fortress Monroe, from which point you can communicate by telegraph.

The supplies referred to in these instructions are exclusive of those required for your own command.

The movements of the enemy may justify, or even make it your imperative duty, to cut loose from your base and strike for the interior to aid Sherman. In such case you will act on your own judgment, without waiting for instructions. You will report, however, what you purpose doing. The details for carrying out these instructions are necessarily left to you. I would urge, however, if I did not know that you are already fully alive to the importance of it, prompt action. Sherman may be looked for in the neighborhood of Goldsboro' any time from the 22d to the 28th of February; this limits your time very materially.

If rolling stock is not secured in the capture of Wilmington, it can be supplied from Washington. A large force of railroad men have already been sent to Beaufort, and other mechanics will go to Fort Fisher in a day or two. On this point I have informed you by telegraph.

U. S. GRANT, Lieutenant-General.

"Major-General J. M. Schofield."

Previous to giving these instructions I had visited Fort Fisher, accompanied by General Schofield, for the purpose of seeing for myself the condition of things, and personally conferring with General Terry and Admiral Porter as to what was best to be done.

Anticipating the arrival of General Sherman at Savannah—his army entirely foot-loose, Hood being then before Nashville, Tennessee, the Southern railroads destroyed, so that it would take several months to reestablish a through line from west to east, and regarding the capture of Lee's army as the most important operation toward closing the rebellion—I sent orders to General Sherman on the 6th of Decem-

ber, that after establishing a base on the sea-coast, with necessary garrison, to include all his artillery and cavalry, to come by water to City Point with the balance of his command.

On the 18th of December, having received information of the defeat and utter rout of Hood's army by General Thomas, and that, owing to the great difficulty of procuring ocean transportation, it would take over two months to transport Sherman's army, and doubting whether he might not contribute as much toward the desired result by operating from where he was, I wrote to him to that effect, and asked him for his views as to what would be best to do. A few days after this I received a communication from General Sherman, of date 16th December, acknowledging the receipt of my order of the 6th, and informing me of his preparations to carry it into effect as soon as he could get transportation. Also that he had expected, upon reducing Savannah, instantly to march to Columbia, South Carolina, thence to Raleigh, and thence to report to me; but that this would consume about six weeks' time after the fall of Savannah, whereas by sea he could probably reach me by the middle of January. The confidence he manifested in this letter of being able to march up and join me pleased me, and, without waiting for a reply to my letter of the 18th, I directed him, on the 28th of December, to make preparations to start, as he proposed, without delay, to break up the railroads in North and South Carolina and join the armies operating against Richmond as soon as he could.

On the 21st of January I informed General Sherman that I had ordered the Twenty-third Corps, Major-General Schofield commanding, east; that it numbered about 21,000 men; that we had at Fort Fisher about 8,000 men; at Newbern about 4,000; that if Wilmington was captured, General Schofield would go there; if not, he would be sent to Newbern; that, in either event, all the surplus force at both points would move to the interior toward Goldsboro', in cooperation with his movement; that from either point railroad communication could be run out; and that all these troops would be subject to his orders as he came into communication with them.

In obedience to his instructions, General Schofield proceeded to reduce Wilmington, North Carolina, in cooperation with the navy under Admiral Porter, moving his forces up both sides of the Cape Fear River. Fort Anderson, the enemy's main defence on the west bank of the river, was occupied on the morning of the 19th, the enemy having evacuated it after our appearance before it.

After fighting on the 20th and 21st, our troops entered Wilmington on the morning of the 22d, the enemy having retreated toward Goldsboro' during the night. Preparations were at once made for a movement on Goldsboro' in two columns—one from Wilmington, and the other from Newbern—and to repair the railroad leading there from each place, as well as to supply General Sherman by Cape Fear River, toward Fayetteville, if it became necessary. The column from Newbern was attacked on the 8th of March at Wise's Forks, and driven back with the loss of several hundred prisoners. On the 11th the enemy renewed his attack upon our intrenched position, but was repulsed with severe loss, and fell back during the night. On the 14th the Neuse River was crossed and Kinston occupied, and on the 21st Goldsboro' was entered. The column from Wilmington reached Cox's bridge, on the Neuse River, ten miles above Goldsboro', on the 22d.

By the 1st of February General Sherman's whole army was in motion from Savannah. He captured Columbia, South Carolina, on the 17th; thence moved on Goldsboro', North Carolina, *via* Fayetteville, reaching the latter place on the 12th of March, opening up communication with General Schofield by way of Cape Fear River. On the 15th he resumed his march on Goldsboro'. He met a force of the enemy at Averysboro', and after a severe fight de-

feated and compelled it to retreat. Our loss in the engagement was about 600. The enemy's loss was much greater. On the 18th the combined forces of the enemy, under Joe Johnston, attacked his advance at Bentonville, capturing three guns and driving it back upon the main body. General Slocum, who was in the advance, ascertaining that the whole of Johnston's army was in the front, arranged his troops on the defensive, intrenched himself and awaited reinforcements, which were pushed forward. On the night of the 21st the enemy retreated to Smithfield, leaving his dead and wounded in our hands. From there Sherman continued to Goldsboro', which place had been occupied by General Schofield on the 21st (crossing the Neuse River ten miles above there, at Cox's bridge, where General Terry had got possession and thrown a pontoon bridge on the 22d), thus forming a junction with the columns from Newbern and Wilmington.

Among the important fruits of this campaign was the fall of Charleston, South Carolina. It was evacuated by the enemy on the night of the 17th of February, and occupied by our forces on the 18th.

On the morning of the 31st of January General Thomas was directed to send a cavalry expedition, under General Stoneman, from East Tennessee, to penetrate South Carolina well down toward Columbia, to destroy the railroads and military resources of the country, and return, if he was able, to East Tennessee by way of Salisbury, North Carolina, releasing our prisoners there, if possible. Of the feasibility of this latter, however, General Stoneman was to judge. Sherman's movements, I had no doubt, would attract the attention of all the force the enemy could collect and facilitate the execution of this. General Stoneman was so late in making his start on this expedition (and Sherman having passed out of the State of South Carolina), on the 27th of February I directed General Thomas to change his course, and ordered him to repeat his raid of last fall, destroying the railroad toward Lynchburg as far as he could. This would keep him between our garrisons in East Tennessee and the enemy. I regarded it not impossible that in the event of the enemy being driven from Richmond he might fall back to Lynchburg and attempt a raid north through East Tennessee. On the 14th of February the following communication was sent to General Thomas:

CITY POINT, VA., February 14, 1865.

General Canby is preparing a movement from Mobile Bay against Mobile and the interior of Alabama. His force will consist of about 20,000 men, besides A. J. Smith's command. The cavalry you have sent to Canby will be debarked at Vicksburg. It, with the available cavalry already in that section, will move from there eastward, in cooperation. Hood's army has been terribly reduced by the severe punishment you gave it in Tennessee, by desertion consequent upon their defeat, and now by the withdrawal of many of them to oppose Sherman. (I take it a large portion of the Infantry has been so withdrawn. It is so asserted in the Richmond papers, and a member of the rebel Congress said a few days since in a speech, that one-half of it had been brought to South Carolina to oppose Sherman.) This being true, or even if it is not true, Canby's movement will attract all the attention of the enemy, and leave the advance from your stand-point easy. I think it advisable, therefore, that you prepare as much of a cavalry force as you can spare, and hold it in readiness to go south. The object would be threefold: first, to attract as much of the enemy's force as possible to insure success to Canby; second, to destroy the enemy's line of communications and military resources; third, to destroy or capture their forces brought into the field. Tuscaloosa and Selma would probably be the points to direct the expedition against. This, however, would not be so important as the mere fact of penetrating deep into Alabama. Discretion should be left to the officer commanding the expedition to go where, according to the information he may receive, he will best secure the objects named above.

Now that your force has been so much depleted, I do not know what number of men you can put into the field. If not more than 5,000 men, however, all cavalry, I think it will be sufficient. It is not desirable that you should start this expedition until the one leaving Vicksburg has been three or four days out, or even a week. I do not know when it will

start, but will inform you by telegraph as soon as I learn. If you should hear through other sources before hearing from me, you can act on the information received.

To insure success, your cavalry should go with as little wagon train as possible, relying upon the country for supplies. I would also reduce the number of guns to a battery, or the number of batteries, and put the extra teams to the guns taken. No guns or caissons should be taken with less than eight horses.

Please inform me by telegraph, on receipt of this, what force you think you will be able to send under these directions.

U. S. GRANT, Lieutenant-General.
Major-General G. H. THOMAS.

On the 15th, he was directed to start the expedition as soon after the 20th as he could get it off.

I deemed it of the utmost importance, before a general movement of the armies operating against Richmond, that all communications with the city, north of James River, should be cut off. The enemy having withdrawn the bulk of his force from the Shenandoah Valley and sent it south, or replaced troops sent from Richmond, and desiring to reinforce Sherman, if practicable, whose cavalry was greatly inferior in numbers to that of the enemy, I determined to make a move from the Shenandoah, which, if successful, would accomplish the first at least, and possibly the latter of these objects. I therefore telegraphed General Sheridan as follows:

CITY POINT, VA., February 20, 1865.—I. P. M.

GENERAL: As soon as it is possible to travel I think you will have no difficulty about reaching Lynchburg with a cavalry force alone. From there you could destroy the railroad and canal in every direction, so as to be of no further use to the rebellion. Sufficient cavalry should be left behind to look after Mosby's gang. From Lynchburg, if information you might get there would justify it, you could strike south, heading the streams in Virginia to the westward of Danville, and push on and join General Sherman. This additional raid, with one now about starting from East Tennessee under Stoneman, numbering four or five thousand cavalry, one from Vicksburg, numbering seven or eight thousand cavalry, one from Eastport, Mississippi, ten thousand cavalry, Canby from Mobile Bay, with about thirty-eight thousand mixed troops, these three latter pushing for Tuscaloosa, Selma, and Montgomery, and Sherman with a large army cutting out the vitals of South Carolina, is all that will be wanted to leave nothing for the rebellion to stand upon. I would advise you to overcome great obstacles to accomplish this. Charleston was evacuated on Tuesday last.

U. S. GRANT, Lieutenant-General.
Major-General P. H. SHERIDAN.

On the 25th I received a despatch from General Sheridan, inquiring where Sherman was aiming for, and if I could give him definite information as to the points he might be expected to move on this side of Charlotte, North Carolina. In answer, the following telegram was sent him:

CITY POINT, VA., February 25, 1865.

GENERAL: Sherman's movements will depend on the amount of opposition he meets with from the enemy. If strongly opposed, he may possibly have to fall back to Georgetown, S. C., and fit out for a new start. I think, however, all danger for the necessity of going to that point has passed. I believe he has passed Charlotte. He may take Fayetteville on his way to Goldsboro'. If you reach Lynchburg, you will have to be guided in your after movements by the information you obtain. Before you could possibly reach Sherman, I think you would find him moving from Goldsboro' toward Raleigh, or engaging the enemy strongly posted at one or the other of these places, with railroad communications opened from his army to Wilmington or Newbern.

U. S. GRANT, Lieutenant-General.
Major-General P. H. SHERIDAN.

General Sheridan moved from Winchester on the 27th of February, with two divisions of cavalry, numbering about 5,000 each. On the first of March he secured the bridge, which the enemy attempted to destroy, across the middle fork of the Shenandoah, at Mount Crawford, and entered Staunton on the 2d, the enemy having retreated on Waynesboro'. Thence he pushed on to Waynesboro', where he found the enemy in force in an intrenched position, under General Early. Without stopping to make a reconnaissance, an immediate attack was made, the position

was carried, and sixteen hundred prisoners, eleven pieces of artillery, with horses and caissons complete, two hundred wagons and teams loaded with subsistence, and seventeen battle-flags, were captured. The prisoners, under an escort of fifteen hundred men, were sent back to Winchester. Thence he marched on Charlottesville, destroying effectually the railroad and bridges as he went, which place he reached on the 8d. Here he remained two days, destroying the railroad toward Richmond and Lynchburg, including the large iron bridges over the north and south forks of the Rivanna River, and awaiting the arrival of his trains. This necessary delay caused him to abandon the idea of capturing Lynchburg. On the morning of the 6th, dividing his force into two columns, he sent one to Scottsville, whence it marched up the James River Canal to New Market, destroying every lock, and in many places the bank of the canal. From here a force was pushed out from this column to Duiguidsville, to obtain possession of the bridge across the James River at that place, but failed. The enemy burned it on our approach. The enemy also burned the bridge across the river at Hardwickville. The other column moved down the railroad toward Lynchburg, destroying it as far as Amherst Court-House, sixteen miles from Lynchburg; thence across the country, uniting with the column at New Market. The river being very high, his pontoons would not reach across it; and the enemy having destroyed the bridges by which he had hoped to cross the river and get on the South Side Railroad about Farmville, and destroy it to Appomattox Court-House, the only thing left for him was to return to Winchester or strike a base at the White House. Fortunately, he chose the latter. From New Market he took up his line of march, following the canal toward Richmond, destroying every lock upon it and cutting the banks wherever practicable, to a point eight miles east of Goochland, concentrating the whole force at Columbia on the 10th. Here he rested one day, and sent through by scouts information of his whereabouts and purposes, and a request for supplies to meet him at White House, which reached me on the night of the 12th. An infantry force was immediately sent to get possession of White House, and supplies were forwarded. Moving from Columbia in a direction to threaten Richmond, to near Ashland Station, he crossed the Annas, and after having destroyed all the bridges and many miles of the railroad, proceeded down the north bank of the Pamunkey to White House, which place he reached on the 19th.

Previous to this the following communication was sent to General Thomas:

CITY POINT, VA., March 7, 1865—9:30 A. M.
GENERAL: I think it will be advisable now for you to repair the railroad in East Tennessee, and throw a good force up to Bull's Gap and fortify there. Supplies at Knoxville could always be got forward as required. With Bull's Gap fortified, you can occupy as outposts about all of East Tennessee, and be prepared, if it should be required of you in the spring, to make a campaign toward Lynchburg, or into North Carolina. I do not think Stoneman should break the road until he gets into Virginia, unless it should be to cut off rolling stock that may be caught west of that.

U. S. GRANT, Lieutenant-General.

Major-General G. H. THOMAS.

Thus it will be seen that in March, 1865, General Canby was moving an adequate force against Mobile and the army defending it under General Dick Taylor; Thomas was pushing out two large and well-appointed cavalry expeditions—one from Middle Tennessee under Brevet Major-General Wilson, against the enemy's vital points in Alabama, the other from East Tennessee under Major-General Stoneman toward Lynchburg—and assembling the remainder of his available forces, preparatory to offensive operations from East Tennessee; General Sheridan's cavalry was at White House; the Armies of the Potomac and James were confronting the enemy, under Lee, in his defences of Richmond and

Petersburg; General Sherman with his armies, reinforced by that of General Schofield, was at Goldsboro'; General Pope was making preparations for a spring campaign against the enemy under Kirby Smith and Price, west of the Mississippi; and General Hancock was concentrating a force in the vicinity of Winchester, Virginia, to guard against invasion or to operate offensively, as might prove necessary.

After the long march by General Sheridan's cavalry over winter roads, it was necessary to rest and refit at White House. At this time the greatest source of uneasiness to me was the fear that the enemy would leave his strong lines about Petersburg and Richmond for the purpose of uniting with Johnston, before he was driven from them by battle, or I was prepared to make an effectual pursuit. On the 24th of March General Sheridan moved from White House, crossed the James River at Jones' Landing, and formed a junction with the Army of the Potomac in front of Petersburg on the 27th. During this move, General Ord sent forces to cover the crossings of the Chickahominy.

On the 24th of March the following instructions for a general movement of the armies operating against Richmond were issued:

CITY POINT, VA., March 24, 1865.

GENERAL: On the 29th instant the armies operating against Richmond will be moved by our left, for the double purpose of turning the enemy out of his present position around Petersburg, and to insure the success of the cavalry under General Sheridan, which will start at the same time, in its efforts to reach and destroy the South Side and Danville Railroads. Two corps of the Army of the Potomac will be moved first in two columns, taking the two roads crossing Hatcher's Run, nearest where the present line held by us strikes that stream, both moving toward Dinwiddie Court-House.

The cavalry under General Sheridan, joined by the division now under General Davies, will move at the same time by the Weldon road and the Jerusalem plank road, turning west from the latter before crossing the Nottaway, and west with the whole column before reaching Stony Creek. General Sheridan will then move independently, under other instructions which will be given him. All dismounted cavalry belonging to the Army of the Potomac, and the dismounted cavalry from the middle military division not required for guarding property belonging to their arm of service, will report to Brigadier-General Benham, to be added to the defences of City Point. Major-General Parke will be left in command of all the army left for holding the lines about Petersburg and City Point, subject, of course, to orders from the commander of the Army of the Potomac. The Ninth Army Corps will be left intact to hold the present line of works so long as the whole line now occupied by us is held. If, however, the troops to the left of the Ninth Corps are withdrawn, then the left of the corps may be thrown back so as to occupy the position held by the army prior to the capture of the Weldon roads. All troops to the left of the Ninth Corps will be held in readiness to move at the shortest notice by such route as may be designated when the order is given.

General Ord will detach three divisions, two white and one colored, or so much of them as he can and hold his present lines, and march for the present left of the Army of the Potomac. In the absence of further orders, or until further orders are given, the white divisions will follow the left column of the Army of the Potomac, and the colored division the right column. During the movement Major-General Weitzel will be left in command of all the forces remaining behind from the Army of the James.

The movement of troops from the Army of the James will commence on the night of the 27th instant. General Ord will leave behind the minimum number of cavalry necessary for picket duty, in the absence of the main army. A cavalry expedition from General Ord's command will also be started from Suffolk, to leave there on Saturday, the first of April, under Colonel Sumner, for the purpose of cutting the railroad about Hicksford. This, if accomplished, will have to be a surprise, and therefore from three to five hundred men will be sufficient. They should, however, be supported by all the infantry that can be spared from Norfolk and Portsmouth, as far out as to where the cavalry crosses the Blackwater. The crossing should probably be at Union. Should Colonel Sumner succeed in reaching the Weldon road, he will be instructed to do all the damage possible to the triangle of roads between Hicksford, Weldon, and Gaston. The railroad bridge at Weldon being fitted up for the passage of carriages, it might be practicable to destroy any accumulation of sur-

plies the enemy may have collected south of the Roanoke. All the troops will move with four days' rations in haversacks, and eight days' in wagons. To avoid as much hauling as possible, and to give the Army of the James the same number of days' supply with the Army of the Potomac, General Ord will direct his commissary and quartermaster to have sufficient supplies delivered at the terminus of the road to fill up the passing. Sixty rounds of ammunition per man will be taken in wagons, and as much grain as the transportation on hand will carry, after taking the specified amount of other supplies. The densely wooded country in which the army has to operate making the use of much artillery impracticable, the amount taken with the army will be reduced to six or eight guns to each division, at the option of the army commanders.

All necessary preparations for carrying these directions into operation may be commenced at once. The reserves of the Ninth Corps should be massed as much as possible. Whilst I would not now order an unconditional attack on the enemy's line by them, they should be ready, and should make the attack if the enemy weakens his line in their front, without waiting for orders. In case they carry the line, then the whole of the Ninth Corps could follow up so as to join or coöperate with the balance of the army. To prepare for this, the Ninth Corps will have rations issued to them, same as the balance of the army. General Weitzel will keep vigilant watch upon his front, and if found at all practicable to break through at any point, he will do so. A success north of the James should be followed up with great promptness. An attack will not be feasible unless it is found that the enemy has detached largely. In that case it may be regarded as evident that the enemy are relying upon their local reserves, principally for the defence of Richmond. Preparations may be made for abandoning all the line north of the James, except enclosed works—only to be abandoned, however, after a break is made in the lines of the enemy.

By those instructions a large part of the armies operating against Richmond is left behind. The enemy, knowing this, may, as an only chance, strip their lines to the merest skeleton, in the hope of advantage not being taken of it, whilst they hurl every thing against the moving column, and return. It cannot be impressed too strongly upon commanders of troops left in the trenches not to allow this to occur without taking advantage of it. The very fact of the enemy coming out to attack, if he does so, might be regarded as almost conclusive evidence of such a weakening of his lines. I would have it particularly enjoined upon corps commanders that, in case of an attack from the enemy, those not attacked are not to wait for orders from the commanding officer of the army to which they belong, but that they will move promptly, and notify the commander of their action. I would also enjoin the same action on the part of division commanders when other parts of their corps are engaged. In like manner, I would urge the importance of following up a repulse of the enemy.

U. S. GRANT, Lieutenant-General.

Major-Generals MEADE, ORD, and SHERIDAN.

Early on the morning of the 25th the enemy assailed our lines in front of the Ninth Corps (which held from the Appomattox River toward our left) and carried Fort Steadman, and a part of the line to the right and left of it, established themselves and turned the guns of the fort against us; but our troops on either flank held their ground until the reserves were brought up, when the enemy was driven back with a heavy loss in killed and wounded, and 1,900 prisoners. Our loss was sixty-eight killed, three hundred and thirty-seven wounded, and five hundred and six missing. General Meade at once ordered the other corps to advance and feel the enemy in their respective fronts. Pushing forward, they captured and held the enemy's strongly entrenched picket line in front of the Second and Sixth Corps, and eight hundred and thirty-four prisoners. The enemy made desperate attempts to retake this line, but without success. Our loss in front of these was fifty-two killed, eight hundred and sixty-four wounded, and two hundred and seven missing. The enemy's loss in killed and wounded was far greater.

General Sherman having got his troops all quietly in camp about Goldsboro', and his preparations for furnishing supplies to them perfected, visited me at City Point on the 27th of March, and stated that he would be ready to move, as he had previously written me, by the 10th of April, fully equipped and rationed for twenty days, if it should become necessary to bring his command to bear against Lee's army, in coöperation with our forces in front of Richmond and

Petersburg. General Sherman proposed in this movement to threaten Raleigh, and then, by turning suddenly to the right, reach the Roanoke at Gaston or thereabouts, whence he could move on to the Richmond and Danville Railroad, striking it in the vicinity of Burkesville, or join the armies operating against Richmond, as might be deemed best. This plan he was directed to carry into execution, if he received no further directions in the mean time. I explained to him the movement I had ordered to commence on the 29th of March. That if it should not prove as entirely successful as I hoped, I would cut the cavalry loose to destroy the Danville and South Side Railroads, and thus deprive the enemy of further supplies, and also prevent the rapid concentration of Lee's and Johnston's armies.

I had spent days of anxiety lest each morning should bring the report that the enemy had retreated the night before. I was firmly convinced that Sherman's crossing the Roanoke would be the signal for Lee to leave. With Johnston and him combined, a long, tedious, and expensive campaign, consuming most of the summer, might become necessary. By moving out I would put the army in better condition for pursuit, and would at least, by the destruction of the Danville road, retard the concentration of the two armies of Lee and Johnston, and cause the enemy to abandon much material that he might otherwise save. I therefore determined not to delay the movement ordered.

On the night of the 27th, Major-General Ord, with two divisions of the Twenty-fourth Corps, Major-General Gibbon commanding, and one division of the Twenty-fifth Corps, Brigadier-General Birney commanding, and McKenzie's cavalry, took up his line of march in pursuance of the foregoing instructions, and reached the position assigned him near Hatcher's Run on the morning of the 29th. On the 28th the following instructions were given to General Sheridan:

CITY POINT, VA., March 28, 1863.

GENERAL: The Fifth Army Corps will move by the Vaughan road at 3 A. M. to-morrow morning. The Second moves at about 9 A. M., having but about three miles to march to reach the point designated for it to take on the right of the Fifth Corps, after the latter reaching Dinwiddie Court-House. Move your cavalry at as early an hour as you can, and without being confined to any particular road or roads. You may go out by the nearest roads in the rear of the Fifth Corps, pass by its left, and passing near to or through Dinwiddie, reach the right and rear of the enemy as soon as you can. It is not the intention to attack the enemy in his entrenched position, but to force him out, if possible. Should he come out and attack us, or get himself where he can be attacked, move in with your entire force in your own way, and with full reliance that the army will engage or follow, as circumstances will dictate. I shall be on the field, and will probably be able to communicate with you. Should I not do so, and you find that the enemy keeps within his main entrenched line, you may cut loose and push for the Danville road. If you find it practicable, I would like you to cross the South Side road, between Petersburg and Burkesville, and destroy it to some extent. I would not advise much detention, however, until you reach the Danville road, which I would like you to strike as near to the Appomattox as possible. Make your destruction on that road as complete as possible. You can then pass on to the South Side road, west of Burkesville, and destroy that in like manner.

After having accomplished the destruction of the two railroads, which are now the only avenues of supply to Lee's army, you may return to this army, selecting your road further south, or you may go on into North Carolina and join General Sherman. Should you select the latter course, get the information to me as early as possible, so that I may send orders to meet you at Goldsboro'.

U. S. GRANT, Lieutenant-General.

Major-General P. H. SHERIDAN.

On the morning the 29th the movement commenced. At night the cavalry was at Dinwiddie Court-House, and the left of our infantry line extended to the Quaker road, near its intersection with the Boydton plank road. The position of the troops, from left to right, was as follows: Sheridan, Warren, Humphreys, Ord, Wright, Parke.

Every thing looked favorable to the defeat of the

enemy and the capture of Petersburg and Richmond, if the proper effort was made. I therefore addressed the following communication to General Sheridan, having previously informed him verbally not to cut loose for the raid contemplated in his orders until he received notice from me to do so:

GRAVELLY CREEK, March 29, 1865.

GENERAL: Our line is now unbroken from the Appomattox to Dinwiddie. We are all ready, however, to give up all from the Jerusalem plank road to Hatcher's Run, whenever the forces can be used advantageously. After getting into line south of Hatcher's, we pushed forward to find the enemy's position. General Griffin was attacked near where the Quaker road intersects the Boydton road, but repulsed it easily, capturing about one hundred men. Humphreys reached Dabney's mill, and was pushing on when last heard from.

I now feel like ending the matter, if it is possible to do so, before going back. I do not want you, therefore, to cut loose and go after the enemy's roads at present. In the morning push around the enemy, if you can, and get on to his right rear. The movements of the enemy's cavalry may, of course, modify your action. We will act all together as one army here until it is seen what can be done with the enemy. The signal officer at Cobb's Hill reported, at 11:30 A. M., that a cavalry column had passed that point from Richmond toward Petersburg, taking forty minutes to pass.

U. S. GRANT, Lieutenant-General.

Major-General P. H. SHERIDAN.

From the night of the 29th to the morning of the 31st the rain fell in such torrents as to make it impossible to move a wheeled vehicle, except as corduroy roads were laid in front of them. During the 30th, Sheridan advanced from Dinwiddie Court-House toward Five Forks, where he found the enemy in force. General Warren advanced and extended his line across the Boydton plank road to near the White Oak road, with a view of getting across the latter; but, finding the enemy strong in his front and extending beyond his left, was directed to hold on where he was and fortify. General Humphreys drove the enemy from his front into his main line on the Hatcher, near Burgess's Mills. Generals Ord, Wright, and Parke made examinations in their fronts to determine the feasibility of an assault on the enemy's lines. The two latter reported favorably. The enemy confronting us, as he did, at every point from Richmond to our extreme left, I conceived his lines must be weakly held, and could be penetrated if my estimate of his forces was correct. I determined, therefore, to extend my line no further, but to reinforce General Sheridan with a corps of infantry, and thus enable him to cut loose and turn the enemy's right flank, and with the other corps assault the enemy's lines. The result of the offensive effort of the enemy the week before, when he assaulted Fort Steadman, particularly favored this. The enemy's intrenched picket line captured by us at that time threw the lines occupied by the belligerents so close together at some points that it was but a moment's run from one to the other. Preparations were at once made to relieve General Humphreys' corps, to report to General Sheridan; but the condition of the roads prevented immediate movement. On the morning of the 31st, General Warren reported favorably to getting possession of the White Oak road, and was directed to do so. To accomplish this, he moved with one division, instead of his whole corps, which was attacked by the enemy in superior force and driven back on the second division before it had time to form, and it, in turn, forced back upon the third division, when the enemy was checked. A division of the Second Corps was immediately sent to his support, the enemy driven back with heavy loss, and possession of the White Oak road gained. Sheridan advanced, and with a portion of his cavalry got possession of the Five Forks; but the enemy, after the affair with the Fifth Corps, reinforced the rebel cavalry, defending that point with infantry, and forced him back toward Dinwiddie Court-House. Here General Sheridan displayed great generalship. Instead of retreating with his whole command on

the main army, to tell the story of superior forces encountered, he deployed his cavalry on foot, leaving only mounted men enough to take charge of the horses. This compelled the enemy to deploy over a vast extent of woods and broken country, and make his progress slow. At this juncture he despatched to me what had taken place, and that he was dropping back slowly on Dinwiddie Court-House. General McKenzie's cavalry and one division of the Fifth Corps were immediately ordered to his assistance. Soon after, receiving a report from General Meade that Humphreys could hold our position on the Boydton road, and that the other two divisions of the Fifth Corps could go to Sheridan, they were so ordered at once. Thus the operations of the day necessitated the sending of Warren, because of his accessibility, instead of Humphreys, as was intended, and precipitated intended movements. On the morning of the 1st of April, General Sheridan, reinforced by General Warren, drove the enemy back on Five Forks, where, late in the evening, he assaulted and carried his strongly fortified position, capturing all his artillery and between 5,000 and 6,000 prisoners.

About the close of this battle, Brevet Major-General Charles Griffin relieved Major-General Warren in command of the Fifth Corps. The report of this reached me after nightfall. Some apprehensions filled my mind lest the enemy might desert his lines during the night, and by falling upon General Sheridan before assistance could reach him, drive him from his position and open the way for retreat. To guard against this, General Miles' division of Humphreys' corps was sent to reinforce him, and a bombardment was commenced and kept up until 4 o'clock in the morning (April 2), when an assault was ordered on the enemy's lines. General Wright penetrated the lines with his whole corps, sweeping every thing before him, and to his left toward Hatcher's Run, capturing many guns and several thousand prisoners. He was closely followed by two divisions of General Ord's command, until he met the other division of General Ord's that had succeeded in forcing the enemy's lines near Hatcher's Run. Generals Wright and Ord immediately swung to the right, and closed all of the enemy on that side of them in Petersburg, while General Humphreys pushed forward with two divisions and joined General Wright on the left. General Parke succeeded in carrying the enemy's main line, capturing guns and prisoners, but was unable to carry his inner line. General Sheridan, being advised of the condition of affairs, returned General Miles to his proper command. On reaching the enemy's lines immediately surrounding Petersburg, a portion of General Gibbon's corps, by a most gallant charge, captured two strong, enclosed works—the most salient and commanding south of Petersburg—thus materially shortening the line of investment necessary for taking in the city. The enemy south of Hatcher's Run retreated westward to Sutherland's Station, where they were overtaken by Miles's division. A severe engagement ensued, and lasted until both his right and left flanks were threatened by the approach of General Sheridan, who was moving from Ford's Station toward Petersburg, and a division sent by General Meade from the front of Petersburg, when he broke in the utmost confusion, leaving in our hands his guns and many prisoners. This force retreated by the main road along the Appomattox River. During the night of the 2d the enemy evacuated Petersburg and Richmond, and retreated toward Danville. On the morning of the 3d pursuit was commenced. General Sheridan pushed for the Danville road, keeping near the Appomattox, followed by General Meade with the Second and Sixth Corps, while General Ord moved for Burkesville along the South Side road; the Ninth Corps stretched along that road behind him. On the 4th, General Sheridan struck the Danville road near Jettersville, where he learned that Lee was at Amelia Court-House. He immediately

intrenched himself and awaited the arrival of General Meade, who reached there the next day. General Ord reached Burkesville on the evening of the 5th. On the morning of the 5th, I addressed Major-General Sherman the following communication:

WILSON'S STATION, April 5, 1865.

GENERAL: All indications now are that Lee will attempt to reach Danville with the remnant of his force. Sheridan, who was up with him last night, reports all that is left, horse, foot, and dragoons, at 20,000, much demoralized. We hope to reduce this number one-half. I shall push on to Burkesville, and, if a stand is made at Danville, will in a very few days go there. If you can possibly do so, push on from where you are, and let us see if we cannot finish the job with Lee's and Johnston's armies. Whether it will be better for you to strike for Greensboro', or nearer to Danville, you will be better able to judge when you receive this. Rebel armies now are the only strategic points to strike at.

U. S. GRANT, Lieutenant-General.

Major-General W. T. SHERMAN.

On the morning of the 6th it was found that General Lee was moving west of Jetersville, toward Danville. General Sheridan moved with his cavalry (the Fifth Corps having been returned to General Meade on his reaching Jetersville), to strike his flank, followed by the Sixth Corps, while the Second and Fifth Corps pressed hard after, forcing him to abandon several hundred wagons and several pieces of artillery. General Ord advanced from Burkesville toward Farmville, sending two regiments of infantry, and a squadron of cavalry, under Brevet Brigadier-General Theodore Read, to reach and destroy the bridges. This advance met the head of Lee's column near Farmville, which it heroically attacked and detained until General Read was killed and his small force overpowered. This caused a delay in the enemy's movements, and enabled General Ord to get well up with the remainder of his force, on meeting which the enemy immediately intrenched himself. In the afternoon General Sheridan struck the enemy south of Sailor's Creek, captured sixteen pieces of artillery and about four hundred wagons, and detained him until the Sixth Corps got up, when a general attack of infantry and cavalry was made, which resulted in the capture of six or seven thousand prisoners, among whom were many general officers. The movements of the Second Corps and General Ord's command contributed greatly to the day's success.

On the morning of the 7th the pursuit was renewed, the cavalry, except one division, and the Fifth Corps moving by Prince Edward's Court-House; the Sixth Corps, General Ord's command, and one division of cavalry, on Farmville, and the Second Corps by the High Bridge Road. It was soon found that the enemy had crossed to the north side of the Appomattox, but so close was the pursuit that the Second Corps got possession of the common bridge at High Bridge before the enemy could destroy it, and immediately crossed over. The Sixth Corps and a division of cavalry crossed at Farmville to its support.

Feeling now that General Lee's chance of escape was utterly hopeless, I addressed him the following communication from Farmville:

April 7, 1865.

GENERAL: The result of the last week must convince you of the hopelessness of further resistance on the part of the Army of Northern Virginia in this struggle. I feel that it is so, and regard it as my duty to shift from myself the responsibility of any further effusion of blood, by asking of you the surrender of that portion of the Confederate States army known as the Army of Northern Virginia.

U. S. GRANT, Lieutenant-General.

General R. E. LEE.

Early on the morning of the 8th, before leaving, I received at Farmville the following:

April 7, 1865.

GENERAL: I have received your note of this date. Though I am entertaining the opinion you express on the hopelessness of further resistance on the part of the Army of Northern Virginia, I reciprocate your desire to avoid useless effusion of blood, and therefore, before considering your proposition, ask the terms you will offer on condition of its surrender.

R. E. LEE, General.

Lieutenant-General U. S. GRANT.

To this I immediately replied:

April 8, 1865.

GENERAL: Your note of last evening, in reply to mine of same date, asking the condition on which I will accept the surrender of the Army of Northern Virginia, is just received. In reply I would say that, peace being my great desire, there is but one condition I would insist upon, namely: That the men and officers surrendered shall be disqualified for taking up arms again against the Government of the United States until properly exchanged. I will meet you, or will designate officers to meet any officers you may name for the same purpose, at any point agreeable to you, for the purpose of arranging definitely the terms upon which the surrender of the Army of Northern Virginia will be received.

U. S. GRANT, Lieutenant-General.

General R. E. LEE.

Early on the morning of the 8th the pursuit was resumed. General Meade followed north of the Appomattox, and General Sheridan, with all the cavalry, pushed straight for Appomattox Station, followed by General Ord's command and the Fifth Corps. During the day General Meade's advance had considerable fighting with the enemy's rear guard, but was unable to bring on a general engagement. Late in the evening General Sheridan struck the railroad at Appomattox Station, drove the enemy from there, and captured twenty-five pieces of artillery, a hospital train, and four trains of cars loaded with supplies for Lee's army. During this day I accompanied General Meade's column, and about midnight received the following communication from General Lee:

April 8, 1865.

GENERAL: I received at a late hour your note of to-day. In mine of yesterday I did not intend to propose the surrender of the Army of Northern Virginia, but to ask the terms of your proposition. To be frank, I do not think the emergency has arisen to call for the surrender of this army; but as the restoration of peace should be the sole object of all, I desired to know whether your proposals would lead to that end. I cannot, therefore, meet you with a view to surrender the Army of Northern Virginia; but as far as your proposal may affect the Confederate States forces under my command, and tend to the restoration of peace, I should be pleased to meet you at 10 A. M. to-morrow on the old stage road to Richmond, between the picket lines of the two armies.

R. E. LEE, General.

Lieutenant-General U. S. GRANT.

Early on the morning of the 9th I returned him an answer as follows, and immediately started to join the column south of the Appomattox:

April 9, 1865.

GENERAL: Your note of yesterday is received. I have no authority to treat on the subject of peace; the meeting proposed for A. M. to-day could lead to no good. I will say, however, General, that I am equally anxious for peace with yourself, and the whole North entertains the same feeling. The terms upon which peace can be had are well understood. By the South laying down their arms they will hasten that most desirable event, save thousands of human lives, and hundreds of millions of property not yet destroyed. Seriously hoping that all our difficulties may be settled without the loss of another life, I subscribe myself, &c.,

U. S. GRANT, Lieutenant-General.

General R. E. LEE.

On the morning of the 9th General Ord's command and the Fifth Corps reached Appomattox Station just as the enemy was making a desperate effort to break through our cavalry. The infantry was at once thrown in. Soon after a white flag was received, requesting a suspension of hostilities pending negotiations for a surrender.

Before reaching General Sheridan's headquarters, I received the following from General Lee:

April 9, 1865.

GENERAL: I received your note of this morning on the picket line, whither I had come to meet you, and ascertain definitely what terms were embraced in your proposal of yesterday with reference to the surrender of this army. I now ask an interview in accordance with the offer contained in your letter of yesterday for that purpose.

R. E. LEE, General.

Lieutenant-General U. S. GRANT.

The interview was held at Appomattox Court-House, the result of which is set forth in the following correspondence:

APPOMATTOX COURT-HOUSE, VA., April 9, 1865.

GENERAL: In accordance with the substance of my letter to you of the 8th instant, I propose to receive the surrender of the Army of Northern Virginia on the following terms, to wit: Rolls of the officers and men to be made in duplicate, one copy to be given to an officer to be designated by me, the other to be retained by such officer or officers as you may designate. The officers to give their individual paroles not to take up arms against the Government of the United States until properly exchanged; and each company or regimental commander sign a like parole for the men of their commands. The arms, artillery, and public property to be packed and stacked, and turned over to the officers appointed by me to receive them. This will not embrace the side-arms of the officers, nor their private horses or baggage. This done, each officer and man will be allowed to return to their homes, not to be disturbed by United States authority so long as they observe their paroles and the laws in force where they may reside.

U. S. GRANT, Lieutenant-General.

General R. E. LEE.

HEADQUARTERS ARMY OF NORTHERN VIRGINIA, {

April 9, 1865.

GENERAL: I received your letter of this date containing the terms of the surrender of the Army of Northern Virginia as proposed by you. As they are substantially the same as those expressed in your letter of the 8th instant, they are accepted. I will proceed to designate the proper officers to carry the stipulations into effect.

R. E. LEE, General.

Lieutenant-General U. S. GRANT.

The command of Major-General Gibbon, the Fifth Army Corps under Griffin, and McKenzie's cavalry, were designated to remain at Appomattox Court-House until the paroling of the surrendered army was completed, and to take charge of the public property. The remainder of the army immediately returned to the vicinity of Burkesville.

General Lee's great influence throughout the whole South caused his example to be followed, and to-day the result is that the armies lately under his leadership are at their homes, desiring peace and quiet, and their arms are in the hands of our ordnance officers.

On the receipt of my letter of the 5th, General Sherman moved directly against Joe Johnston, who retreated rapidly on and through Raleigh, which place General Sherman occupied on the morning of the 13th. The day preceding news of the surrender of General Lee reached him at Smithfield.

On the 14th a correspondence was opened between General Sherman and General Johnston, which resulted on the 18th in an agreement for the suspension of hostilities, and a memorandum or basis for peace, subject to the approval of the President. This agreement was disapproved by the President on the 21st, which disapproval, together with your instructions, was communicated to General Sherman by me in person on the morning of the 24th, at Raleigh, North Carolina, in obedience to your orders. Notice was at once given by him to General Johnston for the termination of the truce that had been entered into. On the 25th another meeting between them was agreed upon, to take place on the 26th, which terminated in the surrender and disbandment of Johnston's army upon substantially the same terms as were given to General Lee.

The expedition under General Stoneman from East Tennessee got off on the 20th of March, moving by way of Boone, North Carolina, and struck the railroad at Wytheville, Chambersburg, and Big Lick. The force striking it at Big Lick pushed on to within a few miles of Lynchburg, destroying the important bridges, while with the main force he effectually destroyed it between New River and Big Lick, and then turned for Greensboro' on the North Carolina Railroad; struck that road and destroyed the bridges between Danville and Greensboro', and between Greensboro' and the Yadkin, together with the depots of supplies along with it, and captured four hundred prisoners. At Salisbury he attacked and defeated a force of the enemy under General Gardner, capturing fourteen pieces of artillery and one

thousand three hundred and sixty-four prisoners, and destroyed large amounts of army stores. At this place he destroyed fifteen miles of railroad and the bridges toward Charlotte. Thence he moved to Slatersville.

General Canby, who had been directed in January to make preparations for a movement from Mobile Bay against Mobile and the interior of Alabama, commenced his movement on the 20th of March. The Sixteenth Corps, Major-General A. J. Smith commanding, moved from Fort Gaines by water to Fish River; the Thirteenth Corps, under Major-General Gordon Granger, moved from Fort Morgan and joined the Sixteenth Corps on Fish River, both moving thence on Spanish Fort and investing it on the 27th; while Major-General Steele's command moved from Pensacola, cut the railroad leading from Tensas to Montgomery, effected a junction with them, and partially invested Fort Blakely. After a severe bombardment of Spanish Fort a part of its line was carried on the 8th of April. During the night the enemy evacuated the fort. Fort Blakely was carried by assault on the 9th, and many prisoners captured; our loss was considerable. These successes practically opened to us the Alabama River, and enabled us to approach Mobile from the North. On the night of the 11th the city was evacuated, and was taken possession of by our forces on the morning of the 12th.

The expedition under command of Brevet Major-General Wilson, consisting of 12,500 mounted men, was delayed by rains until March 23d, when it moved from Chickasaw, Alabama. On the 1st of April General Wilson encountered the enemy in force under Forrest near Ebenezer Church, drove him in confusion, captured 800 prisoners and three guns, and destroyed the central bridge over the Cahawba River. On the 2d he attacked and captured the fortified city of Selma, defended by Forrest with 7,000 men and thirty-two guns, destroyed the arsenal, armory, naval foundry, machine shops, vast quantities of stores, and captured 8,000 prisoners. On the 4th he captured and destroyed Tuscaloosa. On the 10th he crossed the Alabama River, and after sending information of his operations to General Canby, marched on Montgomery, which place he occupied on the 14th, the enemy having abandoned it. At this place many stores and five steamboats fell into our hands. Thence a force marched direct on Columbus, and another on West Point, both of which places were assaulted and captured on the 16th. At the former place we got 1,500 prisoners and fifty-two field guns, destroyed two gunboats, the navy yard, foundries, arsenal, many factories, and much other public property. At the latter place we got three hundred prisoners, four guns, and destroyed nineteen locomotives and three hundred cars. On the 20th he took possession of Macon, Georgia, with sixty field guns, 1,200 militia, and five generals, surrendered by General Howell Cobb. General Wilson, hearing that Jeff. Davis was trying to make his escape, sent forces in pursuit, and succeeded in capturing him on the morning of May 11th.

On the 4th day of May General Dick Taylor surrendered to General Canby all the remaining rebel forces east of the Mississippi.

A force sufficient to insure an easy triumph over the enemy under Kirby Smith, west of the Mississippi, was immediately put in motion for Texas, and Major-General Sheridan designated for its immediate command; but on the 26th day of May, and before they reached their destination, General Kirby Smith surrendered his entire command to Major-General Canby. This surrender did not take place, however, until after the capture of the rebel President and Vice-President; and the bad faith was exhibited of first disbanding most of his army and permitting an indiscriminate plunder of public property.

Owing to the report that many of those lately in arms against the Government had taken refuge upon

the soil of Mexico, carrying with them arms rightfully belonging to the United States, which had been surrendered to us by agreement—among them some of the leaders who had surrendered in person—and the disturbed condition of affairs on the Rio Grande, the orders for troops to proceed to Texas were not changed.

There have been severe combats, raids, expeditions, and movements to defeat the designs and purposes of the enemy, most of them reflecting great credit on our arms, and which contributed greatly to our final triumph, that I have not mentioned. Many of these will be found clearly set forth in the reports herewith submitted; some in the telegrams and brief despatches announcing them, and others, I regret to say, have not as yet been officially reported.

For information touching our Indian difficulties, I would respectfully refer to the reports of the commanders of departments in which they have occurred.

It has been my fortune to see the armies of both the West and East fight battles, and from what I have seen I know there is no difference in their fighting qualities. All that it was possible for men to do in battle they have done. The Western armies commenced their battles in the Mississippi Valley, and

received the final surrender of the remnant of the principal army opposed to them in North Carolina. The armies of the East commenced their battles on the river from which the Army of the Potomac derived its name, and received the final surrender of their old antagonist at Appomattox Court-House, Virginia. The splendid achievements of each have nationalized our victories, removed all sectional jealousies (of which we have unfortunately experienced too much), and the cause of crimination and recrimination that might have followed had either section failed in its duty. All have a proud record, and all sections can well congratulate themselves and each other for having done their full share in restoring the supremacy of law over every foot of territory belonging to the United States. Let them hope for perpetual peace and harmony with that enemy, whose manhood, however mistaken the cause, drew forth such herculean deeds of valor.

I have the honor to be,

Very respectfully, your obedient servant,

U. S. GRANT, Lieutenant-General.

Hon. E. M. STANTON, Secretary of War.

ADJUTANT-GENERAL'S OFFICE, November 18, 1863.
[Official copy], E. D. TOWNSEND,

Assistant Adjutant-General.

R

RAILROAD ACCIDENTS IN THE UNITED STATES FOR A SERIES OF YEARS.—The total number of casualties by railroad accidents in 1865 was 1,762, of which 335 resulted in death, and 1,427 in wounds. In 1864 the number of casualties was 1,890, viz.: killed, 404; wounded, 1,486—a decrease in 1865 of casualties 128; deaths, 69; wounded, 59. These figures do not include accidents where no lives were lost, accidents to individuals which were caused by their own carelessness or design, or deaths or injuries resulting from the recklessness of persons in crossing or standing upon railroad tracks when trains were in motion. The following table exhibits the number of railroad accidents, with the number of persons killed and injured by such casualties, during the past thirteen years:

YEARS.	Accidents.	Killed.	Wounded.
1858.....	133	234	496
1854.....	198	156	590
1855.....	142	110	583
1856.....	143	105	629
1857.....	126	180	586

New York.—In 1850 the Legislature of New York enacted a law requiring all railroad companies in the State to file with the State Engineer, by the first of December in each year, statements of their condition and business operations for the fiscal year ending September 30th, and it was made the duty of the State Engineer to make abstracts of these reports in consolidated form, and to lay the same before the Legislature on its assembling in January. In 1854 this law was amended by providing for the appointment of a Board of Railroad Commissioners, consisting of the State Engineer, one commissioner to be selected by the railroad companies, and one to be appointed by the Governor. These commissioners held office two years, when, on their own recommendation, the law was repealed, and the law of 1850 was reenacted. That law is still in force. Under this law the State Engineer lays before the Legislature annually the reports of all the railroad companies of the State, with compilations of the same. But his reports contain no recommendations or suggestions to the Legislature, nor is it made his duty to visit or inspect any of the roads of the State. The only object gained by the Legislature of New York through this law is uniform and full reports from all the railroad companies.

From the reports of the New York State Engineer for the past six years we take the following figures, showing the number of persons car-

ried on the railroads (steam) of the State, with the number of persons killed and injured:

YEARS.	No. Passengers.	Killed.	Injured.
1850.....	12,188,059	119	77
1860.....	9,805,978	148	71
1861.....	8,684,189	147	88
1862.....	8,707,789	141	84
1863.....	10,765,681	193	91
1864.....	14,192,056	285	181

From the annual reports of the Auditor-General for the past five years we take the following figures:

YEARS.	No. Passengers.	Killed.	Injured.
1860.....	5,726,597
1861.....	5,925,501	118	83
1862.....	7,057,805	175	226
1863.....	10,135,189	208	314
1864.....	14,252,218	325	366

Massachusetts.—From the reports of the Secretary of the Commonwealth for the past six years, we take the following summary of passengers carried and accidents on the railroads:

YEARS.	No. Passengers.	Killed.	Injured.
1859.....	10,856,686	52	28
1860.....	10,801,097	46	23
1861.....	11,252,631	48	24
1862.....	12,020,315	72	15
1863.....	14,043,554	75	25
1864.....	18,906,028	83	81

BRITISH AND NEW YORK RAILROADS.

The following tables relating to the United Kingdom are constructed from the returns made annually to the British Board of Trade, and those relating to New York from the returns made to the State Engineer and Surveyor. Both cover the decennial period 1855-'64:

BRITISH RAILROADS.

YEARS.	Miles of road.	Stocks, Bonds, and Floating Debt.	Passengers carried.	ACCOUNTS OF OPERATIONS.		
				Receipts.	Expenses.	Profits.
1855.....	8,280	£297,594,709	118,595,185	£21,807,599	£10,299,709	£11,507,890
1856.....	8,797	307,595,086	129,847,592	23,165,491	10,887,456	12,278,035
1857.....	9,094	315,157,253	189,008,858	24,174,610	11,940,289	12,234,321
1858.....	9,542	325,375,507	189,198,609	23,956,749	11,663,925	12,292,824
1859.....	10,009	384,362,928	149,807,148	25,743,503	12,598,218	13,145,285

1863-'64.....	58,949	4,976	14,659	10,237	4,423
1855-'64.....	\$58,816	4,156	\$9,207	\$5,768	\$3,439

REFORMED CHURCHES. The German Reformed Church of the United States reported for the year 1865 the following statistics: General synod, 1; synods, 2; classes, 27; ministers, 460; congregations, 1,134; members, 107,394; unconfirmed members, 73,576; baptisms, 10,829; confirmations, 4,903; received on certificate, 1,612; communion, 89,115; excommunicated, 160; dismissed, 674; deaths, 4,675; Sabbath-schools, 852; Sabbath-school scholars (one synod only reported), 20,551; benevolent contributions, \$97,041.80. This, as compared with the report of the previous year, shows an increase of 1 classis, 13 ministers, 35 congregations, 8,619 members, 7,275 unconfirmed members, 1,744 communion, and \$77,512.46 contributions for benevolent objects. The Church has two "classes" in the late Confederate States, those of Virginia and North Carolina. The great majority of both ministers and people, in these classes, have expressed a desire to remain in connection with the synods in the Northern States.

The fifty-ninth annual meeting of the General Synod of the Dutch Reformed Church of the United States, was opened on June 7th at New Brunswick, N. J. The Synod passed the following resolutions on the state of the country:

Resolved, That we recognize, in the situation in which the war has left the Southern States, a loud and imperative call to philanthropic and Christian effort; and pledge ourselves to use our utmost exertions for the harmonizing and evangelizing of the population, the amelioration of the condition of the freedmen, and the restoring of the waste places in Zion by our domestic missionary operations.

Resolved, That while we have no sympathy with that false spirit of charity, born of Universalism and Humanitarianism, that would arrest the vindication of justice and the punishment of guilt, we counsel the largest possible exercise of clemency toward the

deluded and the repentant, forgiving their trespasses as Christ has forgiven us.

Resolved, That in the sudden and violent death of our tried and trusted President, Abraham Lincoln, we recognize, with a submission of faith, a mystery which says, "Be still, and know that I am God;" a chastisement which shows that even four years of civil war have not sufficiently humbled and purified us as a nation; and a call to all of us to be ready at our posts of duty for the Master's summons, whether it come in the middle watch of the night or at the cock-crowing. We bless God for the incalculable service that our late beloved President rendered to the cause of the Union and liberty, and for the testimony for Christianity which he left behind him; and over his new-made grave we consecrate ourselves afresh to the country and the cause for which he lived and died, and to the Saviour whom he honored.

The Church had, in 1865, 32 classes, 427 churches, 436 ministers, 54,286 communicants.

The Committee on Domestic Missions presented a favorable report. They had aided 75 churches and mission stations, of which 22 are in the West. These contain 4,239 members, of which 501 were received during the last year. Connected with these were 88 Sabbath-schools, with 5,890 pupils. Receipts from all sources during the year amounted to \$24,315.83, leaving a balance in the treasury of nearly \$5,000. The church-building fund amounts to \$8,630. The Synod resolved to make a special effort to raise \$50,000 for the church-building fund. On motion of the Committee of Correspondence, it was resolved to appoint delegates for a National Protestant Convention to meet delegates appointed from the Presbyterian General Assemblies and the Congregational National Convention.

In the Reformed State Church of France, the contest between the "Evangelical" ("Orthodox," "Conservative") and "Liberal" ("Rationalistic," "Unitarian") schools continued

with great animosity. At the elections for the Presbyterian Councils in January, the "Liberals" came off victorious at Havre and Rouen, but in Paris the "Orthodox" ticket, one of whose candidates was M. Guizot, was elected by a small majority. The Presbyterian Council of Paris also showed its determination to exclude "Liberal" pastors from the pulpits by rejecting a minister presented to it by A. Coquerel, Senior, as his assistant.

The Reformed Church of France numbered, in 1865, 105 consistories, 489 parishes, 692 *annezes*, 895 churches, 1,304 schools, 661 pastors.

The controversy between the Evangelical and Liberal schools continues also to divide the Dutch Reformed Church in Holland and in South Africa. In Holland considerable sensation was produced by the resignation of Dr. Pierson, of Rotterdam, one of the leaders of the "Liberal" party, who, in a memoir addressed to his congregation, expressed the opinion that clergymen of the Liberal school who continue to baptize and adhere apparently to the old doctrinal standard of the Church, are guilty of the worst kind of equivocation and artifice, and can, therefore, not fail to exercise a most demoralizing influence upon society. In the Reformed Dutch Church of South Africa, the Rev. Mr. Kotze had declared (1862), in Synod, that what the catechism said of natural depravity, namely, that "man is inclined to all evil," is not true, and not fit for even a heathen, yea, that the devil only could say so. He was told to retract this assertion, but declined, whereupon, by a vote of Synod, he was deposed from office. He appealed to the Supreme Court of the colony, and this court, at the close of 1864, pronounced the deposing act of the Synod illegal, and reinstated him in office. This brought on a bitter controversy between the two parties in the Church.

REUSS, the name of two German principalities. All the males, members of the princely house, since the commencement of the eleventh century, have been called Heinrich. The individuals are distinguished by figures, which run on to a hundred, beginning afterwards again at one. I. REUSS GREIZ. Reigning Prince, Heinrich XXII., born March 28, 1864, succeeded his father November 8, 1859. There is no representation of the people. Population in 1864, 43,924 (in 1861, 42,130). Area, 148 square miles. Revenue, about 200,000 thalers; contingent to the Federal army 334 men. II. REUSS SCHLEIZ, reigning Prince, Heinrich LXVII., born October 20, 1789, succeeded his brother, Heinrich LXVI. on June 19, 1854. Heir apparent, Prince Heinrich XIV., born May 28, 1832. A representative form of government was introduced by decree of November 30, 1849, but modified, April 14, 1852, and again June 20, 1856. Population in 1864, 86,472 (in 1861, 83,360); area, 297 square miles. Contingent to Federal army, 783 men. In the Budget for the financial period of 1868-'65, the annual revenue is fixed at 281,850 thalers.

RHODE ISLAND. The second session of the Legislature elected in 1864 met at Providence in January, 1865, and adjourned *sine die* on March 18th. Among the measures passed was a joint resolution, by an almost unanimous vote, ratifying the antislavery amendment to the Constitution; an act authorizing a loan of a million of dollars, payable in thirty years; and an act, which, by providing that six per cent. shall be the legal rate of interest unless some other sum is expressly stipulated, practically abolished the usury laws.

The political canvass of the State commenced in March. The Republican Convention assembled at Providence on the 15th, and renominated for Governor the present incumbent of the office, James Y. Smith. Their resolutions were as follows:

Resolved, That it is our paramount duty, as citizens of the United States, to preserve and perpetuate the Union and Constitution, and that this duty has become only the more sacred by reason of all the patriot lives, and of all the blood and treasure, which during the past four years have been sacrificed in its fulfillment.

Resolved, That we approve the measures adopted by the Federal administration for the prosecution of the war, and that we pledge ourselves to support its continued prosecution unto the complete extinguishment of the rebellion.

Resolved, That we congratulate the soldiers and sailors of the army and navy upon the brilliant successes which they have recently achieved, and that we render them our most hearty thanks for all their glorious and inestimable services to the cause of the Union.

Resolved, That in order to avoid the inequalities of a draft, it is the true policy of the State to fill its military quotas by voluntary enlistments, and to that end to make provision for the payment of liberal bounties to volunteer recruits.

Resolved, That the thanks of the people of the State are due to His Excellency James Y. Smith for his fidelity in the discharge of his office, and especially for his untiring efforts to fill the quotas of the State by voluntary enlistments.

The Providence "Journal," one of the leading Republican papers of the State, refused to support the nomination of Gov. Smith, on the ground that his administration had been "so pernicious to the State that it would be at once a disgrace and disaster to Rhode Island to continue it." A committee of colored voters also published an address, adopting all the Republican nominations except those of Governor and Lieut.-Governor. In place of these they nominated the Hon. Edward Harris for Governor, and Rowland Hazard for Lieut.-Governor, who were pledged to support the colored population on the following issue presented by the address:

It has been the policy and interest of this slavery to prescribe all colored men, to heap contempt upon their heads—to act unjustly by them—to treat them as if they had no rights that white men were bound to respect. In keeping with this policy the school authorities of Providence and Newport have unjustly, in disregard of the Constitution, forced colored persons into separate schools—schools which are very poor in comparison to those which have been sustained for others, sustained in part by taxes exacted from colored men. We object to this, not only because of its obvious unjustness, but because it con-

times to foster this proscribing of us on account of our color, even now when the North is ceasing almost entirely to pay any deference to slavery, the enemy of the Government. We say that this adjunct to slavery ought to die with slavery; that Rhode Island should not be disgraced with this, its relic; that in all matters in which the States have control, no such distinction should be known, leaving individuals to do as they may in social relations, which is their right—but where the law has sway, as in public schools, all should be equal, with no disparaging distinctions. This is the issue we present. We have been urging the point for twelve years; we have succeeded in carrying our prayer before the lower House, and needed but four votes to success in the Senate, and believe that we would have succeeded there but for undue interference.

The Democratic Convention met at Providence on March 22d, and nominated a State ticket, headed by Charles S. Bradley for Governor. All the candidates having refused to accept the nominations tendered to them, Alfred Anthony was nominated for Governor and Gen. Olney Arnold for Lieut.-Governor, together with the remainder of the ticket originally nominated. Resolutions were passed in favor of filling the quotas of the State by voluntary enlistment instead of by draft, and tendering thanks to the soldiers of Rhode Island in the national service; also the following on national affairs:

Resolved, That the Democratic party, now as heretofore, is based upon and recognizes only the Constitution as the supreme authority in political affairs, and is determined, so far as its influence extends, to maintain the Union and the supremacy of the laws; and we enter our solemn protest against bribery and corruption in State and national affairs, which is so ruinous to public morals.

The election took place on April 5th, and in consequence of the withdrawal of the Democratic candidates, resulted in favor of the Republicans by the following vote:

Governor.	Number of votes.
James Y. Smith.....	10,061
Scattering.....	788
Majority for Smith.....	9,808

The total vote was 10,814 against 22,162 in the Presidential election in the preceding November. The Legislature elected was largely Republican, less than a dozen Democrats having been chosen to both Houses. Thomas A. Jenckes and Nathan F. Dixon, Republicans, were also elected members of Congress, the former almost unanimously, and the latter by a majority of 1,590 over his Democratic competitor.

The Legislature met at Newport on May 30, 1865, and the new State Government was inaugurated. The following resolution was adopted in the course of the session by a nearly unanimous vote:

Resolved, That it is the sense of the General Assembly and people of this State, that in the reconstruction of the government of the States lately in rebellion against the Government and authority of the United States, the usual power and legal authority vested in the Federal Government should be executed to secure equal rights, without respect to color, to all citizens residing in those States, including herein the right of the elective franchise.

At the commencement of the late war, the public debt of Rhode Island was only about \$4,000, and at its close it amounted to \$4,000,000, the whole of which was accumulated for war purposes. The following is an official statement of the funded debt of the State, with the date of the authorizing acts and the time of payment:

Date of Act.	Amount of Debt.	Principal payable.
August, 1861.....	\$500,000.....	October 1, 1871
August, 1862.....	1,200,000.....	September 1, 1871
January, 1863.....	800,000.....	April 1, 1863
June, 1863.....	1,000,000.....	January 1, 1868
May, 1864.....	1,000,000.....	February 1, 1894

The interest is at the rate of six per cent, payable semi-annually. The million dollars' loan, authorized by the act of January, 1865, has never been issued, and probably never will be. During 1865, bonds to the amount of \$111,000 were paid, leaving the outstanding debt on January 1, 1866, \$3,889,000. There has been no regular sinking fund provided for the extinction of the debt; but from a law passed by the General Assembly, authorizing any surplus money in the Treasury to be used for the purchase of the bonds, it is thought that after another year the State will be in the market as a purchaser, and that before the time expires for the payment of them they will all be retired.

The Adjutant-General of Rhode Island reports that the State furnished to the war an aggregate of 25,355 men, as follows:

Three months' men.....	8,147
Nine months' men.....	2,069
One year's men.....	1,013
Two years' men.....	11
Three years' men.....	12,110

Reduced to a three years' standard, these would number 20,236. These were comprised in one regiment and two independent batteries of light artillery, three regiments and one squadron of cavalry, three regiments of heavy artillery, one of which was colored, and eight regiments and one company of infantry. The prepared claims against the United States for expenses growing out of the war amount to nearly \$330,000, the settlement of which is protracted on account of certain questions affecting their legal character.

A census was taken in 1865, from a partial report of which it appears that the State is making steady progress in population and wealth. The total population is 184,695, of whom 112,207 were born in Rhode Island, 32,585 in other States of the Union, and 39,903 in foreign countries. This shows a gain of 10,075, or nearly six per cent. over the United States census of 1860. The whole number of persons who can neither read nor write is 10,181, of whom 1,552 are of American parentage, 7,313 of Irish parentage, and the remainder were born in various foreign countries. The State supports 543 paupers, and the average number of convicts is somewhat over one hundred. In 1865 there were 87,786 acres of ploughed land, 101,243 of mowing land, 152,457 of pasture land, and 201,000 of unimproved

land. The chief agricultural products of the previous year were as follows:

Hay.....	70,565 tons.
Wheat.....	758 bushels.
Rye.....	29,161 "
Indian Corn.....	466,638 "
Oats.....	176,944 "
Barley.....	46,500 "
Buckwheat.....	2,869 "
Potatoes.....	710,627 "

In 1865 the State contained 11,133 horses; 40,717 sheep, from which were obtained 114,781 pounds of wool; 16,269 swine, and 17,517 milch cows, which yielded 2,223,272 gallons of milk, from which were made 857,466 pounds of butter, and 136,130 pounds of cheese.

RICHARDSON, CHARLES, an English philologist and author, born July, 1775; died at Feltham, England, October 6, 1865. He was intended for the law, but quitted it early for literary pursuits. His first production, published in 1805, was "Illustrations of English Philology," a critical examination of Dr. Johnson's Dictionary, and remarks on Dugald Stewart's essay "On the Tendency of some late Philological Speculations," in which he strenuously advocated Horne Tooke's "Principles of Language." Shortly afterwards he undertook the lexicographical portion of the "Encyclopædia Metropolitana." The first part of this work was published in January, 1811; but in consequence of the failure of the original proprietors, it was suspended for some years. In January, 1835, the work was resumed, and completed in the spring of 1837. One of its most attractive features is Dr. Richardson's Dictionary, which is in every way different in plan and arrangement from all its predecessors; its great merit lying in the careful tracing of each word to its true root, and in placing the chief derivative words under their respective primitives; also, in the historical illustrations of the meaning of the words arranged chronologically, affording ample facilities to all who would master the niceties of the language. In 1854 he published a volume on the "Study of Language." He was also the author of an "Historical Essay on English Grammar and English Grammarians," and another on "Fancy and Imagination," and a contributor to "Notes and Queries." He deserves great credit as a philologist, for the impulse which he gave to etymological inquiry; and though some of his etymologies have been discarded by later philologists, yet his principles of investigation and their results will remain as his most enduring monument.

RICHARDSON, Sir JOHN, an eminent scientific writer and explorer, born in Dumfries, Scotland, in 1787; died at Lancrigg, Grasmere, June 5, 1865. He was educated at the grammar school in his native town, studied medicine at the University of Edinburgh, in 1801, and in 1807 entered the navy as an assistant surgeon. Before the completion of his twenty-first year he was raised to the rank of acting surgeon of the Hercules, and in 1819 accompanied Sir John Franklin in his Arctic expedition as surgeon and naturalist. His scientific

life began with the publication, in 1823, of Sir John Franklin's Narrative, accompanied with "Geognostical Observations, Remarks on the Aurora Borealis, Notices of Fishes, and a Botanical Appendix." In 1825 he sailed a second time with Franklin to the polar regions, from whose command he was detached on the special duty of surveying the coast between the Mackenzie and Coppermine Rivers, a work which he resumed twenty-two years later, under more favorable auspices. The chief scientific fruit of this expedition, so far as Dr. Richardson was concerned, is represented by the truly valuable work, *Fauna Boreali-Americana*, which appeared in several quarto volumes from 1829 to 1837. From 1828 to 1838 Dr. Richardson was connected with the Melville Hospital, and the ten years following was physician of the fleet. In 1846 he was created a knight, and in 1848, when 61 years of age, he commanded one of the expeditions which went in search of Sir John Franklin, an account of which he published in the "Boat Voyage," two volumes. Returning in 1849, he spent another half dozen years at Hasler, and receiving no further appointment from the Government, retired from the service. The remaining ten years of his life were spent mainly in literary and scientific pursuits. He took great interest in ethnological and linguistic studies, and the investigations of forty years in zoology and its kindred sciences made him a true and trustworthy anthropologist. Among his latest works is "The Polar Regions," a moderate-sized octavo volume, published in 1860. His life was one of rare kindness and charity.

RINDERPEST. (See CATTLE PLAGUE.)

ROMAN CATHOLIC CHURCH. The "Pontifical Annual" for 1866, published in Rome, gives the following details on the present condition of the Roman Catholic Church: "Pius IX., born at Sinigaglia, on the 13th May, 1792, was elected Pope on the 16th June, 1846; he is consequently in the 74th year of his age, and the twentieth of his Pontificacy. The Sacred College at the present time includes 57 cardinals, 6 members of the order of bishops, 43 that of priests, and 8 of deacons. Of that number 29 reside habitually at Rome, and the others abroad; 17 were created by Gregory XVI. and 42 by Pius IX. The most ancient cardinal (Mario Mattei) has worn the purple for the last 34 years; the eldest (Antonio Tosti) is aged 90, and the youngest (Giuseppe Milesi-Pironi-Ferretti) only 49. There are eleven hats at present vacant. Throughout the globe are 12 patriarchal sees, 154 archiepiscopal, and 692 episcopal. To those numbers must be added 226 sees *in partibus infidelium* (30 archbishoprics and 196 bishoprics). Of the patriarchs, 5 belong to the Eastern and 7 to the Latin Churches; of the archbishops, 24 to the former and 134 to the latter; and of the bishops, 46 are Eastern and 646 Latin. In the five parts of the world are 96 sees, which hold their authority directly from Rome. The number of

apostolic vicars is 101; of delegations, 5; prefectures, 21; of abbeys and prelatships of no diocese, 14. Pius IX. has raised 12 cathedrals to the rank of metropolitan churches; has erected 4 archbishoprics and 96 bishoprics, and has created 15 vicarates, 1 delegation, and 6 prefectures."

The Roman Catholic Church in the United States was divided, in 1865, into the following provinces:

1. The Province of Baltimore, embracing the dioceses of Baltimore, Charleston, Erie, Philadelphia, Pittsburgh, Richmond, Savannah, Wheeling, and the Vicariate Apostolic of Florida, covers the States of Maryland and Virginia, with the District of Columbia, and the States of North and South Carolina, Delaware, Pennsylvania, Georgia, and Florida. Over these States are located 600 churches, chapels, and stations; 29 theological seminaries and colleges; 154 academies and schools of various grades; 88 convents; 8 monasteries; 82 orphan and other asylums, and 14 hospitals.

2. The Province of New York, embracing the dioceses of New York, Albany, Boston, Burlington, Brooklyn, Buffalo, Hartford, Newark, and Portland, covers the States of New York, New Jersey, and New England. In the province are planted 875 churches, chapels, and stations; 12 theological seminaries and colleges; 422 academies and other schools; 60 convents; 12 monasteries; 25 asylums; and 11 hospitals.

3. The Province of Cincinnati, embracing the dioceses of Cincinnati, Cleveland, Covington, Detroit, Fort Wayne, Louisville, Saint Louis, and Vincennes, covers the States of Ohio, Indiana, Michigan, and Kentucky. Here are located 964 churches, chapels, and stations; 8 theological seminaries and colleges; 496 academies and schools; 89 convents; 18 monasteries; 17 asylums; and 8 hospitals.

4. The Province of St. Louis, embracing the dioceses of St. Louis, Alton, Chicago, Dubuque, Milwaukee, Nashville, Santa Fé, St. Paul, the Vicariate Apostolic east of the Rocky Mountains, and the Vicariate Apostolic of Nebraska, covers the States of Missouri, Illinois, Tennessee, Wisconsin, Iowa, Kansas, the Territories of Nebraska, New Mexico, Arizona, Colorado, and the Indian Territory. This section has its 1,111 churches, chapels, and stations; 17 theological seminaries and colleges; 269 academies and other schools; 60 convents; 12 monasteries; 29 asylums; and 8 hospitals.

5. The Province of San Francisco, embracing the dioceses of San Francisco and Monterey, and the Vicariate Apostolic of Marysville, includes the States of California, Nevada, and all the Territories east of the Rio Colorado, having 126 churches, chapels, and stations; 3 theological seminaries and colleges; 27 academies and other schools; 9 convents; 3 monasteries; 6 asylums; and 2 hospitals.

6. The Province of Oregon City has 2 dioceses, Oregon City and Nesqueally; 88 churches,

chapels, and stations; 1 seminary; 1 college; 14 academies; 1 convent; 8 asylums; and 1 hospital. It comprises the State of Oregon and the Territories of Idaho and Washington.

7. The Province of New Orleans, embracing the dioceses of New Orleans, Galveston, Little Rock, Mobile, Natchez, Natchitoches, covers the States of Louisiana, Alabama, Mississippi, Texas, and Arkansas. In this province are 105 churches, chapels, and stations; and 22 academies and schools; 6 convents; 1 monastery; and 2 asylums.

The grand total of all the establishments as above given, embracing a vast amount of property, is as follows: 3,884 churches, chapels, and stations; 74 theological seminaries and colleges; 1,404 academies and schools, with an aggregate of about 80,000 pupils; 213 convents; 49 monasteries; 150 orphan asylums, containing nearly 9,000 orphans, and about 150 other benevolent institutions; and 49 hospitals.

By a decree of the Congregation of Propaganda, confirmed by Pope Pius IX., on the 25th July, 1858, the prerogative of place is granted to the See of Baltimore, so that in councils, assemblies, and meetings of every kind, precedence is given to the Archbishop of Baltimore for the time being, and the seat of honor above any Archbishops of these provinces that may be present, without regard to the order of promotion or consecration.

The Roman Catholic population of the United States is estimated at from 4,000,000 to 5,000,000 inhabitants. The following table exhibits the progress from 1808 to 1861:

YEARS.	Prefectures.	Dioceses.	Vicariates.	Bishops.	Priests.	Churches.	Stations and Chapels.	Religious Institutions.
1808..	1	1	..	2	68	80	9
1830..	1	11	..	10	292	230	9
1840..	1	16	..	17	482	454	356	18
1850..	8	27	..	27	1,081	1,073	505	29
1854..	7	41	9	39	1,574	1,719	746	34
1855..	7	41	9	40	1,714	1,824	678	37
1856..	7	41	9	40	1,761	1,910	805	37
1857..	7	41	9	32	1,872	2,058	829	36
1858..	7	43	9	43
1859..	7	43	9	46	2,108	2,334
1860..	7	43	8	49	2,225	2,385	1,128	43
1861..	7	43	8	45	2,317	2,517	1,278	49

In England and Scotland, the Roman Catholic Church has increased, from 1842 to 1865, as follows:

	1842.	1865.	Incr. in 23 Yrs.

Colleges.....	1	2	1

* Includes 17 bishops.

† Includes 4 bishops.

The number of Roman Catholics in England and Scotland is from 1,500,000 to 2,000,000. Ireland had, in 1865, 4 ecclesiastical provinces (Armagh, Dublin, Cashel, Tuam), 81 archbishops and bishops (exclusive of 5 bishops with no local jurisdiction in Scotland; 1,070 parishes, 984 parish priests, 1,631 administrators, curates, and others (including chaplains and professors, etc., in colleges and schools), 340 regular clergy, total priests (including bishops, private chaplains, those in asylums, etc.), about 3,120; 73 communities of priests, 67 communities of men, 189 communities of women. According to the official census of 1861, there were in Ireland 4,490,583 Roman Catholics in a total population of 5,764,543. At the election of a new House of Commons, in 1865, 34 Roman Catholics were chosen; 31 in Ireland, and 3 in England (Sir John D. Acton for Bridgnorth, Lord Edward F. Howard for Arundel, Sir John Simeon for Isle of Wight. Sir John D. Acton received only one majority, and, some error being discovered in the count of votes, was unseated by resolution of the House of Commons).

The agitation arising at the close of the year 1864, out of the publication of the "Encyclical," of December 8, 1864, subsided soon after the beginning of the new year, without producing any of the collisions with the civil governments that were anticipated. Only in France there was a transient difficulty between the Government, which forbade the bishops to publish the Encyclical, and the bishops who disobeyed this order. Some of the bishops were censured by the Council of State for having violated the laws of the State, but the Government refraining from taking any further measures against the bishops, the interest in the controversy soon died out. The Government of Italy entered into negotiations with the Pope on the filling of the vacant episcopal sees, and a reduction of the number of dioceses, but no result was obtained. At the election of a new Italian Parliament in October, that political party which supported the demands of Rome suffered a defeat, not more than half a dozen of its candidates being elected. The Government announced its intention to bring in a bill for the total separation of Church and State. In the United States, a difficulty arose in consequence of the new State constitution of Missouri, which demanded of all clergymen an oath of loyalty to the State Government. The Archbishop of St. Louis issued a letter to the clergy of the State, expressing strong dissatisfaction with the oath, and instructing them, in case the civil power should exact the oath, to inform him of the "particular circumstances" of their position, in order that he might be able to give them council and assistance. Several priests, who refused to take the oath, were arrested, and the difficulty had not been settled at the close of the year. In Mexico, the decrees of the Emperor Maximilian confirming and ratifying the sales of Church property, and granting religious toleration, called forth re-

monstrances on the part of the Bishops of Mexico and the Pope. The bishops in an address to the Emperor denied the authority of the State Government over Church property, and, with regard to religious toleration, declared: "We can see nothing that renders it, not to say urgent, but even excusable." The Pope, in a letter to Maximilian, had previously given this advice:

"Your Majesty is well aware that, in order effectively to repair the evils occasioned by the revolution, and to bring back as soon as possible happy days for the Church, the Catholic religion must above all things continue to be the glory and the mainstay of the Mexican nation, to the exclusion of every other dissenting worship; that the bishops must be perfectly free in the exercise of their pastoral ministry; that the religious orders should be reestablished or reorganized, conformably with the instructions and the powers which we have given; that the patrimony of the Church and the rights which attach to it may be maintained and protected; that no person may obtain the faculty of teaching and publishing false and subversive tenets; that instruction, whether public or private, should be directed and watched over by the ecclesiastical authority; and that, in short, the chains may be broken which, up to the present time, have held down the Church in a state of dependence, and subject to the arbitrary rule of the civil government."

When, notwithstanding this advice, the Emperor adhered to his policy, and issued the decrees above mentioned, the Papal Nuncio was recalled from Mexico. The Emperor of Russia on December 12th (new style 26th) issued a decree, taking the administration of all the revenue of the Roman Catholic clergy in the kingdom of Poland, out of the hands of the ecclesiastical authorities, and intrusting it to the Central Commission of the Finances and the Treasury. All the revenue continues to be used for Roman Catholic Church purposes. The dime is not abolished, but made optional with the payer. The salary of the Archbishop of Warsaw is fixed at 24,000 francs. The parish priests are divided into two classes (as in France), those of the first class receiving 2,000 francs, and those of the second 1,600 francs annually. The decree was to take effect on December 20, 1865 (new style January 1, 1866). The Archbishop of Warsaw still remained in exile at the close of the year.

Monastic communities are rapidly increasing in the Roman Catholic Church. The Jesuits, according to an official statement published by the Order, numbered at the close of 1864, 7,728 members, being 129 more than in 1863. The Order is divided into 21 provinces, of which four belong to France, five to Germany, Belgium, and Holland, two to Spain, five to Italy, one to Mexico, and the other four are distributed in England, Ireland, and the United States. In 1864 there were 1,582 Jesuits employed in foreign missions, being an increase of 242 over the year 1863. The European missions amounted to 28; the Asiatic, to 296; the African, to 218; the North American, to 276; the South American, to 199; the Oceanian, to 55; and 15 were on passage. Twenty-five years ago,

namely, in 1841, there were but 8,568 Jesuits, so that since that period the number has been more than doubled. In the Comarea alone there are 475 Jesuits, of whom 385 reside in Rome, and the remainder in the Colleges of Velletri, Frosinone, and Viterbo. There are 178 Jesuits superintending the Roman College; 15 are engaged in directing the journal "*Civiltà Cattolica*," 18 in the German College, 11 in the College dei Nobili, 13 in the South American College, 54 live in the House of Profession, 79 are assigned to the novitiate, and 28 remain in the House of Refuge. The Franciscan Order, according to the "*Monde*," of Paris, also increases in number every year, and now reckons 200,000 men and 300,000 sisters, including the Tertiaries. It possesses 252 provinces, and 26,000 convents, of which five are in Palestine and 80 in Turkey.

The Catholic Congress of Belgium did not meet in 1865. That of Germany held its annual meeting in September, at Treves. The Baron of Andlaw, of Baden, was chosen President, and A. Reichensberger, late Vice-President of the Prussian Chamber of Representatives, first Vice-President. The Society for Circulating Catholic Books, which owes its origin to one of the former Congresses, was reported to be an entire success. Progress was also reported as to the project of a Free Catholic University, to which large pecuniary aid had been contributed by the ladies. A long debate was called forth by a proposition to constitute a central office for the Catholic press of Germany, for the purpose of concentrating the literary forces of the best publicists, of rewarding them according to their merits, and utilizing them for the establishment of an autographic correspondence. The proposition was deemed by a majority of the Congress impracticable, and withdrawn.

RUSSIA, an empire in Europe and Asia. Present Emperor, Alexander II., born 1818; succeeded his father in 1855. His apparent, Alexander, born in 1845. The area in 1862 was estimated at 7,770,882 English square miles. The population was, according to the latest dates, as follows:

POLITICAL DIVISIONS.	Population.	Years.
European Russia.....	61,061,901	1864
Caucasian ".....	4,237,704	1858
Asiatic ".....	4,070,988	"
Poland.....	4,840,466	1860
Finland.....	1,798,909	1863
American Russia.....	24,200
	76,054,013

Caucasian Russia was, in 1862, divided into five governments (Kutais, Stavropol, Tiflis, Shemakha, Erivan), and three territories (Kuban Terek, and Daghestan). Asiatic Russia, in the same year, consisted of four governments (Tobolsk, Tomsk, Yenisseisk, Irkutsk), and seven territories (Transbaik, Yakutsk, Amoor, East Siberian Coast, Semipalatinsk, Siberian Kirghee, Orenburg Kirghee). Since then Russia has made steady and considerable progress in Central Asia, and in February, 1865, the newly

conquered provinces were organized into the province of Turkestan. The total population was estimated, in 1865, at about 80,000,000. The largest cities, in 1861, were the following: Petersburg, 586,293; Moscow, 377,838; Odessa, 117,999; Kishineff, 93,359; Saratoff, 83,763; Riga, 78,958. The revenue was estimated, in the budget for 1865, at 880,093,514 rubles. The public debt, on January 1, 1864, was 64,338,583 rubles. The exports of Russia in 1863 were valued at \$152,094,268, and the imports at \$154,159,030. The movement of shipping on the Baltic, White, Black, and Azov Seas, was, in 1863, as follows: Entered, 9,893 vessels; cleared, 9,945 vessels. The number of vessels running between Russian and Finnish ports was 1,658; and the number of coasting vessels, 19,066. The Russian army, on January 1, 1863, numbered 812,196 men; on the outbreak of the insurrection in Poland, it was increased to 1,350,090; and after the suppression of the insurrection, it was again reduced to 800,000 men. The fleet, in June, 1863, consisted of 248 steamers, carrying 2,387 guns, and 62 sailing vessels, carrying 1,304 guns. In 1865, according to a report of the Minister of the Navy, the fleet consisted of 258 steamers and 43 sailing vessels.

The hereditary Grand-duke Nicholas Alexandrovitch died at Nice, on April 24th, at the age of 22 years. Only a few weeks before, his betrothal to the Princess Dagmar, of Denmark, sister to the Princess of Wales, had been officially announced in Russia. The princess was present with the grand-duke during the closing hours of his life.

The year 1865 witnessed the convocation of the first Provincial Diets of the empire, which had been established by an Imperial ukase of January 21, 1864. The Provincial Diets consist of deputies elected by the district assemblies, which were provided for by the same ukase, and are composed of the representatives of the landed gentry, the towns and the villages. The deputies are elected for three years, and their number is regulated by that of the representatives in each district, according to a table annexed to the law. These provincial assemblies are under the presidency of the provincial marshals of nobility, in cases where the Emperor does not appoint another president. Provincial rural courts, composed of a president and six members, chosen for three years, are established by the provincial assemblies. The payment of the members of these courts is optional with the provincial assemblies. The president of the provincial rural court must be confirmed in his office by the Minister of the Interior. The assemblies thus constituted have an administrative power, and a general supervision over rural affairs, while the rural courts exercise the executive power, and a closer supervision of matters relating to the rural body. The provincial and district assemblies meet once a year; the district assemblies not later than September, the provincial

assemblies not later than December. The district assemblies sit ten days, the provincial twenty days; but the sessions may be prolonged by the permission severally of the Governor of the province and the Minister of the Interior, who may also convene extraordinary assemblies.

A Petersburg letter in the Paris "Moniteur" of December 9th, gives the following account of one of the most important of these assemblies, that of Moscow:

After the preliminary business had been got through, the Assembly received communication of several motions touching the general interests of the province of Moscow. The first was intended to show the necessity of establishing a bank, designed to aid in relieving the wants of the province. Another had reference to the situation of the Russian clergy. The law accords to each parish about thirty-three acres of land, to provide for the subsistence of all the members of its clergy; but, according to the proposer of the motion, those resources rarely suffice for the maintenance of a great number of persons attached to the parish, and often encumbered with large families. Some remedy was therefore declared to be necessary for such a state of things, and the wishes expressed on the subject were referred to the examination of a committee. Mention must also be made of observations presented by several speakers on the subject of the obstacles which impede agricultural labors in the government of Moscow, in consequence of the difficulty of settling disputes between the workmen and the landowners. Other members called attention to the state of the roads, to the reorganization of the local police, and to the necessity of establishing a medical service in the villages. This last proposition was also referred to a committee, with an injunction to present its report next session. The Provincial Assembly of Moscow, composed of seventy-one members, was presided over by Prince Metschersky. The aristocratic element was predominant, but as that circumstance was the result of election, it may be regarded as an exact representation of the interests of the country. In closing its labors the Assembly, by a decision inserted in the minutes, came to a resolution to present to the Emperor the expression of its gratitude for the rights accorded by his Majesty, and the session was then closed, as it had been opened, by the Governor of Moscow.

The Diet of the Province of St. Petersburg was opened on December 9th. It consisted of 60 members, one-third noblemen of German extraction, and was presided over by M. de Platonoff. Communications were received from two district assemblies, strongly complaining of the paucity of the rights vested in the Provincial Diets, and of the "intrinsic contradictoriness" of the act calling the new establishments into existence. The majority of the Assembly sympathized with these complaints, but deemed it best to confine themselves to the passage of a report adopting the contents of the two reports *in toto*, instead of presenting a petition to the Emperor.

A much bolder and determined opposition to the institution of the provincial assemblies was made by the Assemblies of Nobles. These assemblies had been consulted by the Government before the law establishing the provincial diets was issued. Most of them had expressed the opinion that the projected law established a basis far too democratic, and would, there-

fore, tend to paralyze the influence of the upper classes, and particularly that of the landed gentry. This objection was most strongly expressed by the Assemblies of St. Petersburg, Simbirsk, Kostroma, Novgorod, and Orenburg, which protested against what they called the dissolving principle of absolute democracy, so strongly infused by the Government into the projected law. Their objections and remonstrances were, however, of no effect.

A similar result attended the representations of the nobility, marshals, and mayors who had been invited to take a consultative part in the deliberations. Prince Gregory Stcherbatoff, Provincial Marshal of St. Petersburg, asked for a better guaranty against arbitrary authority than the law provided. Prince Gagarin, provincial marshal, and Prince Alexander Stcherbatoff, mayor of Moscow, protested against the "levelling and demagogic" project of the Government. But their objections were overruled, and, with the exception of a few insignificant modifications, the law passed in the form originally proposed by the Government.

The Assemblies of the Nobles, held in 1865, also gave, in several instances, an emphatic expression to their opposition. That of Moscow adopted, by a vote of 270 to 37, the following address to the Czar:

Most Gracious Sire: The nobility of Moscow cannot at their present meeting refrain from expressing to your Majesty their feelings of deep devotion and gratitude for your Majesty's wise initiations invariably directed toward the welfare of our country. We are ready, Sire, to cooperate with you, by word and by deed, in the difficult but glorious path which you have chosen. We are convinced, Sire, that you will not halt in that path, and that you will proceed in it, leaning on your faithful nobility and on the whole Russian nation. The strength of our country lies in its friendly unity and integrity. By gathering your hitherto divided Russia into a single body, by welding it firmly together and replacing the separate rights of some of its parts by general rights for all, you will eliminate forever all possibility of revolt and civil war. The new rural institutions which your Majesty has called into life are destined when fully developed to make durable the glory and strength of Russia. Complete, therefore, Sire, the edifice of the State of which you have laid the foundation, by convoking a general assembly of men elected by the whole of Russia for the discussion of requirements common to the empire. Command your faithful nobility, with the same object, to elect the best men from amidst their ranks. The nobility have always been firm supporters of the Russian throne. Without being considered in the service of the State, without enjoying the rewards connected with it, fulfilling their duty without remuneration, to the advantage of the country and of general order, those men will, by their position, be called upon to guard the moral and political principles on which the State reposes, and which are so inestimable to the people and so indispensable to their real well-being. By that means, Sire, you will ascertain the wants of our country in their true light, you will restore confidence in the executive, you will attain a strict observance of the law by all and each, and its applicability to the requirements of the country. The truth will reach your throne unimpeded, enemies at home and abroad will be silenced, when the people, in the persons of their representatives, shall with love surround the throne, and watch constantly that no

treason approach it from any quarter. Most gracious Sire! the nobility of Moscow appear before your Majesty at the call of their sacred duty as faithful subjects, having only the advantage of the State in view. We speak, Sire, in the full conviction that our words correspond with your own policy, and with the spirit of your great reforms.

A commission of four members, headed by Count Orloff Davidoff, grand master of ceremonies at the imperial court, was named to present the petition. By the Czar it was received most ungraciously, and the following rescript was sent in reply:

The reforms which have been prepared, and those already realized, sufficiently prove my solicitude for the improvement, as far as possible, of the political organization of the country. The past must be a guaranty for the future. No subject has a right to anticipate my resolutions, nor is any class legally entitled to speak in the name of others. Such violations of the law can but retard my plans. I am fully convinced that I shall never again meet with such obstacles on the part of my faithful nobility.

The Minister of the Interior was instructed to communicate the rescript to all the governors of provinces, in order to communicate it to the Assemblies of Nobles on their meeting. This severe censure of the Moscow nobility did not, however, have the desired effect. Other provincial assemblies openly declared their concurrence in the resolutions passed at Moscow. The Government was so much incensed at this course, that when eighteen members of the Assembly of Nobles in the government of Pskoff joined the request of the Moscow nobility for a national representation to be granted to Russia, legal proceedings were taken against them. The editor of a Moscow newspaper, the *Viezi* (Despatch), which published the Moscow address, and Count Orloff Davidoff, the chief of the deputation, were sentenced by the first tribunal to two months' imprisonment.

The progress of the Russians in Central Asia, an account of which was given in the *ANNUAL CYCLOPEDIA* for 1864, is also a marked feature of the history of Russia in 1865. In October, 1864, the town of Chemkend was occupied by the Russians, who thus became the masters of the region which in official reports is described as "the granary of all the country between the Chu and the Syr-Daria." In the succeeding month, Prince Gortchakoff drew up a circular to the diplomatic agents of Russia, instructing them to represent to the Governments near which they were accredited, the advance of Russia in Central Asia as proceeding not from a desire of conquest, but of rectifying the frontier, and securing it against unceasing attacks from uncivilized hordes. In February, 1865, the province of Toorkestan was constituted under Gen. Tcherniaieff. On May 9th, the same general defeated and slew the Khokand leader, the regent during the Khan's minority, close to Tashkend. On June 15th this important place itself was taken by assault, and with it the independent State of Khokand ceased to exist. The "Invalid" of St. Petersburg gave the fol-

lowing account of the occupation of this town, and of the events following the capture:

Tashkend was occupied in accordance with the expressed desire of the inhabitants. The latter, finding it impossible to shake off the yoke of Zadyk Kenisarin, a Khokand chief of mountaineers, who had made himself master of their quiet and industrious town, had repeatedly sent to Gen. Tcherniaieff, soliciting his protection and interference. The general at first would not meddle with the internal affairs of the Turkish tribes, although, as he was well aware, Russian exports to Tashkend had considerably fallen off in consequence of the ascendancy of Zadyk Kenisarin; but when he found that the people of Tashkend, rather than submit to the arbitrary rule of their new master, were inviting the Emir of Bokhara to come and take possession of the town, he, very much against his will, discovered the necessity of protecting his own interests in a more forcible way, and took Tashkend by storm. The Russian columns were headed by a priest, carrying aloft a crucifix, and the enemy, after some resistance, evacuated the place. The Russians had twenty-five men killed, eighty-nine wounded, and twenty-eight bruised. This occurred in the night of the 27th of June (old style), and as the Russian general hoped and trusted, was to be the last and concluding scene of his military activity in those parts. But the Emir of Bokhara, the proud chief of a fierce and fanatic tribe, resented the capture of the contested city as an insult offered to him and his race, and in most offensive language claimed Tashkend, which, it is true, had asked for his assistance a few weeks before, as a place to which he had a lawful title. His troops appeared at the same time in the neighborhood of the city, and things looked as though he was going to vindicate his claim by force of arms. To have diplomatized with an Asiatic prince would have been useless under these circumstances, and so the Russian general resolved to have recourse to reprisals without loss of time. The Bokhara merchants in Orenburg were placed under arrest, their goods sequestered, and those on their way to Nijni Novgorod prevented from proceeding on their journey. The Emir was visibly overawed by the energy of the Russian general, and in his intercourse with M. Tcherniaieff began to observe again the ordinary forms of politeness, which he had neglected for a time. His troops have since been withdrawn, and his claims, it is possible, will be abandoned for good.

Later Russian accounts state that on the 30th August (12th September) General Tcherniaieff gave a grand banquet, at which 30,000 persons were present, without any disorder whatever taking place; that this event made a great impression upon the inhabitants; that industry began to recover from the consequences of the former internal dissensions; that the population was rapidly increasing, already numbering more than 100,000; and that Tashkend was becoming the commercial metropolis of Central Asia. The Khan of Bokhara, according to the same accounts, was peaceably disposed, and had sent presents to Gen. Tcherniaieff.

A great concession was made, in 1865, to the principle of religious toleration. Twenty years ago the Emperor Nicholas caused some 50,000 Livonians and Esthonians to secede from the Protestant Church, to which their ancestors had been converted centuries ago by the Teutonic Knights. The proselytes were regarded as orthodox ever after, and a law was enacted at the same time that a Greek church should be built whenever sixty believers could be col-

lected to attend divine service. It soon became, however, apparent that the converts were not pleased with the change, and refused to have their marriages celebrated and their children baptized by the Russian priests. Moved by their demoralized condition, the Emperor Alexander permitted these people in 1865 to bring up their children in the Protestant faith.

In February, the Governor of Poland received the official instructions of the Russian Government for the reorganization of that kingdom. Under these instructions, the imperial commissions for special purposes and the existing provincial governments were suspended, and the different branches of the public administration were henceforth to be only dependent on the respective ministries at St. Petersburg. The whole of Poland was to be divided into twenty-seven departments, each under the direction of a prefect. The post of Governor of Poland was suppressed—the functions of this office having been fulfilled by the chief of the civil administration and the commander-in-chief of the troops stationed in the Polish provinces. The national Russian party, the chief organs of which are the "Moscow Gazette" and the St. Petersburg "Invalide," demanded a complete Russification of Poland. They loudly expressed their dissatisfaction with the Government on account of its not adopting efficient measures to that end. Only the law providing for the establishment of special schools for each of the nationalities residing in the kingdom was hailed by the "Moscow Gazette" as a step in the right direction. "When the German, Lithuanian, and Russian inhabitants," remarked this paper, "are divided into separate groups, there will remain only 3,000,000 Poles of unadulterated race, whom it will be easy to reduce to impotence. It is more important still to make allies in the midst of the Poles themselves, and, above all, to gain the attachment of the peasants. The rural law would thus appear as a conservative measure with regard to Russia; and, without dwelling upon the principle of justice it contains, this fact alone—that of our own preservation—suffices to justify it."

The most radical measures for the extirpation of the Polish nationality were taken in the western governments of Russia, where nearly the whole of the land has hitherto been in the hands of a Polish aristocracy, while the bulk of the population belonged to another Slavic race. An imperial decree, issued in December, forbade any land in these provinces to be sold to either a Pole or a Roman Catholic. The most stringent laws were adopted for the suppression of the public use of the Polish language. Thus, in December, a circular was published from General Bezak, the Governor-General of Kieff, to the commanders of districts, in which it is stated that it has come to his knowledge that in some districts in his government the books and accounts of chemists are kept in the Polish language, and that physicians,

even those who are in the service of the State, use the Polish language in their prescriptions, for the addresses of their patients, and the directions for applying remedies. The circular then instructs the local commanders to give notice to all chemists and dispensers of medicine that their accounts and books must be kept in the Russian language, and that the tickets placed upon their vials and boxes must exclusively be made out in that language, under a penalty of fifty rubles for the first violation of the order, one hundred rubles for the second, and complete suppression of the business for the third. Physicians are to be warned that they must not write their prescriptions in any other language than Russian or Latin, under penalty of a fine of ten rubles for each prescription in Polish, and physicians in the service of the State will in addition be deprived of their appointments.

Among the new laws issued in 1865, was one relating to the press. According to this law, it remains optional for the editor of a newspaper to submit his journal to the censorship before publication. After three warnings, any paper can be temporarily suspended by the Minister of the Interior. A vote of the Senate is required for the suppression of a newspaper.

A special law was published for Finland. It provides that no newspaper is allowed to appear unless a large sum is deposited by the proprietors as a guaranty, which sum is doubled for newspapers published at Helsingfors and Abo. All offences against this law are to be punished by heavy contributions, amounting in certain cases to 8,000 marks. A severe censorship is established for all newspapers published in Finland in a foreign language, and also for all books coming from abroad. Travellers who bring any printed matter with them are bound to give it up to the custom house authorities, and foreign political papers coming by post are to be first seen by the censor, who is to decide whether they are to be forwarded or confiscated.

The "Russian Correspondence" of St. Petersburg publishes the following statistical accounts of the Ministry of Public Instruction in Russia: "The budget of that department for the present year amounts to a sum of 6,467,452 rubles. The empire contains about 67,670,000 inhabitants, consequently every inhabitant contributes nine and a half copecks to the budget; but, as every ministry has its special schools, it results that the real budget is much more considerable. The schools of the orthodox churches contain 320,000 pupils; those of the Ministry of the Domains 198,000; and those of the irregular troops 42,500. The schools in the Caucasus, those of the churches of the foreign confessions, and also private establishments, receive nothing from the Ministry of Public Instruction. The infant and provincial schools are nearly all maintained by the fees paid by the pupils, by charitable funds, and by the parishes. The number of 1,124 parish schools receive from the Ministry of Public Instruction an annual subvention of only 81,000 rubles, or 27.50 rubles each, and a few model schools 6,772 in all. The ministry distributes besides to 474 schools of the district towns a sum of 662,671 rubles, or 2,325 each. The ninety-six gymnasiums of the empire receive 2,350,874 rubles,

or 24,500 each. The budget of the six universities amounts to 1,371,048, which fixes the part of each at 228,509 rubles. On the 15th September last our six universities contained 4,084 immatriculated students and 557 free pupils, distributed among the different faculties: 43 per cent. belonged to the legal faculty; 24 per cent. to the medical; 27 per cent. to the scientific; 64 per cent. to the philological; 2 per cent. to the theological faculty of Dorpat; and 4 per cent. to the faculty of Oriental languages of St. Petersburg."

Conflagrations continued to desolate the whole extent of the empire. The population were almost always warned beforehand that on a certain day their town or village would be set on fire if a certain sum of money was not deposited at a stated place. The threat

rarely fails to be executed. Kremenchoug, a town in the south of Russia, had to contend against twenty fires during a short space of time. According to an official announcement, there were 120 "conflagrations" in the three provinces of Kieff, Volhynia, and Podolia, from the 15th of June to the 15th of July. No less than 837 houses (of continental size) were destroyed by this calamity, which affected 14 towns and 106 villages, inflicting a loss of 300,000 rubles upon the poor inhabitants. Fires of smaller extent are not included in these figures. In the kingdom of Poland proper six towns and thirty villages were almost entirely burnt to the ground within two weeks.

S

SAN DOMINGO, or the Dominican Republic, a State of the West Indies, comprising the eastern portion of the Island of Hayti. Area, 22,000 square miles; population about 200,000.* In January, 1865, the new Spanish ministry of Narvaez, seeing the impossibility of continuing any longer the war against San Domingo, proposed to the Cortes a bill, repealing the act of 1861, by which that country was annexed to Spain. This bill was, on April 1st, adopted by the Chamber of Deputies, after an animated debate, by a vote of 155 to 68, and on April 29th, by the Senate, by 93 votes against 39. On May 6th, a royal decree was issued, announcing the abandonment by Spain of San Domingo.

It only remained to withdraw the Spanish garrisons from the few strongholds of which they had possession, in particular San Domingo City. The Dominican Government at Santiago sent down commissioners to arrange this with the Spanish Governor in due order. Nearly every thing was settled to mutual satisfaction, and the treaty was even signed and sent to the Dominican Executive for ratification, when suddenly in July new difficulties arose. The retiring Governor-General, Don José de la Gandara, insisted that the treaty of evacuation should take the form of a "high and voluntary act of generosity" on the part of Spain, and that the Dominican Government should register a national declaration that the war which Spain had been waging for three years was just and lawful, and that she now retired "purely and solely out of a noble and disinterested respect to the preference of the Dominican people for an independent nationality." The Dominican Government utterly refused to subscribe to such a declaration, which, among other evil consequences, would admit by implication that Spain might demand the repayment of what she had expended in her efforts to conquer the republic. In the course of the conferences one of the Dominican commissioners said they could not admit that "the

independence which they had painfully achieved at the cost of long and terrible sacrifices was the gift of any power but God's high grace," and added that "the united Dominican people, without regard to rank or color, had planted the white cross of the republic on the principle enunciated by the Great Mother of free nations, that America belongs to Americans, and we will endure all our trials over again sooner than desert it." Gandara replied that he would enclose the Dominican republic in a fiery ring of ruin and desolation by means of a perpetual blockade, and incessant raids on all its forts and vast towns. Soon after Gandara accepted, however, the propositions submitted by the Government of San Domingo, and the Spanish troops evacuated the whole island.

The administration of the Provisional President, Polanco, was overthrown in January, 1865. In March, General Pimentel, one of the most successful leaders in the war against Spain, was constitutionally elected to the Provisional Presidency of the Republic, which was to terminate three months after the Spanish evacuation. A new *pronunciamento* broke out in the city of San Domingo, on the 4th of August. At a large meeting of the citizens, the further participation of General Pimentel in the administration was repudiated, and General J. M. Cabral was commissioned Protector of the Republic to summon a national convention for the definite arrangement of the public service. General Cabral addressed a letter to General Pimentel, proposing an amicable conference, with the view of mutually arranging all questions at issue. These proposals were not appreciated, but in the mean time all the important towns, including Cibao, acceded to the St. Domingo programme, in consequence of which General Pimentel resigned. General Cabral, on accepting the Presidency, issued a proclamation, assigning that he did so on account of the gravity of the situation, believing it to be his duty to sacrifice himself on the altar of his country. His programme of government he asserted to be comprised in

* Compare ANNUAL CYCLOPEDIA for 1864.

these words: "Liberty, Equality, and Fraternity;" the people to exercise their sovereignty without compulsion, and give themselves to security. In December an election of President was held, which resulted in the success of General Buenaventura Baez, who gave to both Cabral and Pimentel seats in the Cabinet.

SAXE, the name of four German States, one grand-duchy and three duchies. Reigning princes, Grand-duke Karl Albert, of S.-Weimar, born June 24, 1818, succeeded his father July 8, 1853; Duke Bernhard I., of S.-Meiningen, born December 17, 1800, succeeded his father December 24, 1803; Duke Ernst I., of S.-Altenburg, born September 16, 1826, succeeded his father August 8, 1853; Duke Ernst II., of S.-Coburg-Gotha, born June 21, 1844. In each of the four States, the legislative power is vested in a Diet, composed of representatives of the nobility, the towns, and the rural districts. The duchy of Coburg-Gotha has two Diets, one for Coburg and one for Gotha. The statistics of the four States are given in the following table:

	Square Miles.	Population, 1864.	Contingent.
Saxe-Weimar.....	1,421	230,201	3,015
" Meiningen.....	988	173,065	2,110
" Altenburg.....	509	141,889	1,478
" Coburg-Gotha.....	816	164,527	2,046

SAXONY, a kingdom in Germany. King, Johann I., born December 12, 1801; succeeded his brother Friedrich August II., on August 9, 1854. Heir apparent, Albert, born April 23, 1828. The present Constitution dates from September 4, 1831, but has been modified by laws of March 31, 1849; May 5, 1851; November 27, 1860; October 19, 1861. The Parliament consists of two Chambers. The upper Chamber comprises the princes of the royal house, the proprietors of eight baronial domains, twelve deputies of the nobility, ten noblemen appointed by the King, the burgo-master of eight towns, the superintendents and deputies of five collegiate institutions, of the University of Leipsic, and the Roman Catholic Chapter of Bautzen. The lower Chamber consists of deputies, separately chosen by the landed proprietors, the towns, the peasants, besides five representatives of commerce and manufacturing industry. The area of the kingdom is 6,777 square miles. The population, in 1864, was 2,343,994, of whom 2,279,892 were Lutherans, 47,441 Roman Catholics, 5,239 Reformed, 1,708 German Catholics, 357 Anglicans, 599 members of the Greek Church, 1,964 Israelites, 2 Mohammedans. The capital, Dresden, had 145,728, and Leipsic 85,394 inhabitants. The annual revenue is estimated in the "Budget," for the financial period of 1864 to 1866, 13,658,984 thalers; the annual expenditures at 13,648,984. The army numbers 25,396 men. The Government of Saxony, during the years 1864 and 1865, took an active part in German politics, and was, in the Federal Diet, together with Bavaria, the leader of the minor States, in

their opposition against the policy pursued by Austria and Prussia, in the Schleswig-Holstein question.

SCHAUMBURG-LIPPE, a German principality. Prince, Adolf, born August 1, 1817; succeeded his father November 21, 1860. Heir apparent, Prince Georg, born October, 1846. Area, 212 square miles. Population in 1864, 31,382. The Diet is composed of all the noble landed proprietors, four deputies of towns, and six of rural districts. Its functions are merely consultative. The capital, Bückeburg, has 4,204 inhabitants. The annual revenue is about 228,000, thalers. To the Federal army this principality has to furnish a contingent of 516 men.

SCHIMMELFENNIG, ALEXANDER, Brigadier-General U. S. volunteers, born in Germany in 1824; died at Minersville, near Reading, Pennsylvania, September 7, 1865. He was an officer under Kossuth in the Hungarian revolt. At the breaking out of the war he was appointed colonel of a Pennsylvania regiment, and served under General Sigel during the Virginia campaign of General Pope. He was nominated a brigadier-general for his services at Bull Run, in November, 1862, but not being confirmed, was renominated in January, 1863, and confirmed in the March following, his commission being dated back to the first nomination. At Chancellorsville, he commanded the first brigade of General Shurz's division of General Howard's Eleventh Corps, and was at Gettysburg with the same command. In February, 1864, he was sent to St. John's Island, and thence crossed to James Island. General Schimmelfennig's forces were the first to enter Charleston, February 13, 1865, when flanked by General Sherman. For some time he remained in command of the defences of the city, but was finally relieved on account of ill health, the result of his exposure during the war, and, retiring to his home in Pennsylvania, rapidly sank under consumption.

SCHLESWIG-HOLSTEIN, two duchies, formerly united to the kingdom of Denmark, but made over, by the treaty of Vienna, signed October 30, 1864, to the Emperor of Austria and the King of Prussia, the King of Denmark "engaging to recognize the arrangement their said Majesties shall make in respect to those duchies." Area and population (according to census of 1864) are as follows:

	Square miles.	Population.
Schleswig.....	3,704	406,436.
Holstein.....	3,255	554,510.

In the "Budget" of the year 1864 to 1865, the revenue for Holstein was fixed at 9,000,750, and that for Schleswig at 6,987,498 marks; the expenditure for Holstein at 5,960,000, and that for Schleswig at 4,974,224. In 1852 the imports into Holstein were valued at 17,193,564 rix dollars, those into Schleswig at 9,804,794; the exports from Holstein at 16,158,904, and those from Schleswig at 4,571,681.

The fate of the two duchies was, throughout

the year 1865, the subject of diplomatic negotiations between Austria and Prussia, but was, at the beginning of the year 1866, still undecided. A small party among the higher nobility declared, in favor of a permanent union of both the duchies with Prussia, while the large majority of the people continued to ask for the recognition of Prince Friedrich of Augustenburg as Duke of Schleswig-Holstein. On January 15th thirty-nine landowners signed at Kiel a resolution (subsequently called "the Kiel Resolution"), in which they pronounced themselves in favor of maintaining the autonomy of the duchies and of fidelity to Prince Friedrich. This resolution was signed by about forty thousand inhabitants of the duchies. The "Kiel Resolution" was, on February 26th, unanimously endorsed by an assembly of delegates of one hundred and sixteen Schleswig-Holstein societies.

Both the people of the duchies and the Prince Augustenburg were willing to make some concessions to Prussia. The central committee of the Schleswig-Holstein societies arrived at a full agreement with regard to this point with the committee of the assembly of German deputies, at a meeting held in Berlin on March 26th, and this agreement was sanctioned by a general assembly of the Schleswig-Holstein societies, held at Rendsburg on April 19th. The Prince Friedrich, in a manifesto (March 31st) addressed to the Government of Prussia, declared himself ready to assent to Rendsburg becoming a Federal fortress, to the cession of territory, to the construction of a canal uniting the German Ocean and the Baltic, and to placing the naval forces under the control of Prussia, but he rejected the entire fusion of the troops of the duchy with the Prussian army, and demanded, as compensation for the concession to be made, a reduction of the expenses of war which the duchies had to pay to the allied Powers.

On August 15, 1865, a convention was concluded between Austria and Prussia, at Gastein, in consequence of which Austria assumed temporarily the administration of Holstein, and Prussia that of Schleswig. (*See GASTEIN CONVENTION.*) Austria, consequently, appointed Field-marshal von Gablenz Governor of Holstein, while Prussia appointed Lieut.-Gen. von Manteuffel Governor of Schleswig. Both Governors entered upon their functions on September 14th.

At an informal meeting of the members of the Holstein Estates, held at Kiel on September 7th, and attended by thirty-one deputies representing the clergy, the towns, and the peasantry, resolutions were passed to send a memorial to the Federal Diet, containing a protest in defence of the ancient rights of the country and against a division of the duchies.

On November 1st the Government of Holstein instructed the police authorities to forbid the editors of newspapers published in the duchy, and all other individuals, to give to any

one titles and denominations appertaining only to sovereigns, and during the provisional state of things, only applicable to the King of Prussia in respect of Schleswig, and the Emperor of Austria in respect of Holstein. At the same time Gen. Gablenz announced to the Prince of Augustenburg that, should his stay in Holstein lead to any demonstration in favor of the Augustenburg claims, his Highness would be immediately expelled from the duchies or placed under arrest.

SCHWARZBURG, the name of two German principalities. Reigning princes, Günther, Prince of Schwarzburg-Sondershausen, born September 24, 1801, succeeded his father August 19, 1835; and Günther, Prince of Schwarzburg-Rudolstadt, born November 6, 1793, succeeded his father April 28, 1807. S.-Sondershausen is an unlimited monarchy, a charter granted in 1849 having again been abolished in 1857. S.-Rudolstadt has, according to the Constitution of 1821 (modified in 1848 and 1854), a Diet, composed of fifteen deputies, elected in equal parts by the nobility, the towns, and the peasants. The area, population, and contingents to the Federal army are as follows:

	Square Mils.	Pop'n., 1864.	Conting't
Schwarzburg-Sondershausen	818	66,159	536
Rudolstadt	840	73,752	929

Nearly all the inhabitants profess the Lutheran religion.

SIGOURNEY, Mrs. LYDIA HUNTLEY, an American poet and prose writer, born at Norwich, Conn., September 1, 1791; died at Hartford, Conn., June 10, 1865. While yet a child, Lydia Huntley gave evidence of the possession of poetic talent, writing in verse with more facility than in prose. Having enjoyed the advantages of a superior education in Norwich and Hartford, she engaged for a time in teaching, first in Norwich, and subsequently, at the solicitation of the late Daniel Wadsworth, in Hartford, where she had a select class of young ladies for five or six years. Under the patronage and at the instance of Mr. Wadsworth, her first volume, "Moral Pieces in Prose and Verse," was published in 1815. In 1819 she became the wife of Mr. Charles Sigourney, an eminent merchant of Hartford, a man of high literary and artistic tastes, and from that time Hartford became her home. Without neglecting her domestic duties, which were always performed with great assiduity and system, she found time for literary pursuits, to which she was strongly attached, at first for the gratification of her own tastes, and subsequently, after Mr. Sigourney lost the greater part of his fortune, as a means of adding to her income. Writing with extraordinary facility, both in prose and verse, and having attained a literary reputation, which secured for her books a ready sale, she busied herself at all leisure moments with the labors of composition. Gentle and liberal in her disposition, she performed much of this labor without other

compensation than the grateful acknowledgments of those for whom she toiled: yet a considerable number of her books yielded her a fair income. In her "Letters of Life," a posthumous work, furnished and published by her daughter, she enumerates fifty-six distinct works, wholly or partially from her own pen, and states that, aside from these, she had contributed more than two thousand articles in prose or verse to different periodicals. Her poetry was not of the highest order; it portrayed rather, in graceful and often felicitous language, the emotions and sympathies of the heart, than the higher conceptions of the intellect. There was a strong resemblance between her and Mrs. Hemans in the scope, character, and aims of her poetry. Her prose was graceful and elegant, modelled to a great extent on that of Addison and the Aikins, who, in her youth, were regarded as the standards of polite literature. All her writings were in the interests of a pure morality, and many of them decidedly religious in their character. Among those which have had a more than ephemeral reputation, were, "Letters to Young Ladies," first published in 1833; "Letters to Mothers" (1838); "Pocahontas and other Poems" (1841); "Pleasant Memories of Pleasant Lands;" "Scenes in my Native Land" (1844); "Illustrated Poems" (1848); "The Voice of Flowers" and "The Weeping Willow" (1845 and 1846); "Water Drops" (1847); "Whispers to a Bride," (1849); "Letters to my Pupils" (1851); "Olive Leaves" (1851); "The Faded Hope" (1852); "Sayings of the Little Ones, and Poems for their Mothers" (1854); "Past Meridian" (1854); "Lucy Howard's Journal" (1857); "The Daily Counsellor" (1859); "Gleanings," a volume of Poems (1860); "The Man of Uz and other Poems" (1862). Perhaps no writer in the country was more constantly called upon for occasional poems of all kinds, elegiac, consolatory, congratulatory, for anniversaries, and for public enterprises of all sorts; and her kind disposition led her to accede to these constantly preferred requests, often greatly to her own inconvenience and discomfort.

But it was not simply or mainly by her literary labors that Mrs. Sigourney was or desired to be known. Her whole life was one of active and earnest philanthropy. The poor, the sick, the deaf-mute, the blind, the idiot, the slave, and the convict, were the objects of her constant care and benefaction. Her pensioners were numerous, and not one of them was ever forgotten. In the period of her earlier married life she spared, in order to give; economizing in her own wardrobe and personal luxuries and enjoyments, that she might be able to bestow her gifts upon the needy; and in later life, when her income from her books and other property, all save that which was absolutely needful for home comforts and expenses, was distributed in a wise and well-considered charity. Her character and worth were highly appreciated in the city, which, for more than

fifty years, had been her home: its numerous bells tolled her requiem for an hour at sunset of the day of her death; and when the last sad honors were to be paid to her remains, its citizens came in such throngs as had never before been seen at a funeral service, and among them it was touching to witness the pressure of the thousands on whom she had bestowed her kindly charities, to take one last look of their sainted benefactor.

SOUTH CAROLINA. The invasion of this State by Gen. Sherman, the fall of the capital, Columbia, and other towns, and the evacuation of Charleston, and its occupation by the Federal forces, are stated under **ARMY OPERATIONS**, to which title the reader is referred. The city of Charleston was placed under martial law by Lieut.-Col. Bennett in command, and the advance of Sherman caused all the military force in the State to be collected in front to resist him. No further military operations of importance took place in the State; and when the armies of Lee and Johnston surrendered, the control of the Federal military power was complete. The people were prompt to resume the pursuits of peace, and ready to renew their allegiance to the Federal Government. On May 8th the Confederate Governor of the State, Magrath, issued a proclamation to the civil officers, requiring them to return to Columbia, the capital, and reopen their offices. But on the 15th Gen. Q. A. Gillmore, who was in command of the department, issued another proclamation, forbidding all persons from paying any attention to the orders of Gov. Magrath, or to similar proclamations of the Governors of Georgia and Florida, which States were within his department. He added:

The policy and wishes of the General Government toward the people of these States, and the method which should be pursued by them in resuming or assuming the exercises of their political rights, will doubtless be made known at an early day.

It is deemed sufficient, meanwhile, to announce that the people of the black race are free citizens of the United States; that it is the fixed intention of a wise and beneficent Government to protect them in the enjoyment of their freedom and the fruits of their industry; and that it is the manifest and binding duty of all citizens, whites as well blacks, to make such arrangements and agreements among themselves for compensated labor as shall be mutually advantageous to all parties. Neither idleness nor vagrancy will be tolerated, and the Government will not extend pecuniary aid to any persons, whether white or black, who are unwilling to help themselves.

District and post commanders throughout this department will at once cause this order to be circulated far and wide, by special couriers and otherwise, and will take such steps to secure its enforcement as may by them be deemed necessary.

Federal troops were stationed at various towns of the State to preserve order, and affairs continued in this shape until June 30th, when President Johnson appointed Benjamin F. Perry as Provisional Governor. The proclamation was similar to the one issued on the appointment of the Provisional Governor of Alabama. (See ALABAMA.)

This was followed, on July 31st, by a proclamation from Gov. Perry, which may be summarily stated as follows:

He proclaims that all civil officers in South Carolina, who were in office when the civil government of the State was suspended, in May last (except those arrested or under prosecution for treason), shall, on taking the oath of allegiance prescribed in the President's amnesty proclamation of the 29th day of May, 1865, resume the duties of their offices, and continue to discharge them under the Provisional Government till further appointments are made.

And further, that it is the duty of all loyal citizens to go promptly forward and take the oath of allegiance before some magistrate or military officer of the Federal Government, who may be qualified for administering oaths, and such are authorized to give certified copies thereof to the persons respectively by whom they were made. And such magistrates or officers are hereby required to transmit the originals of such oaths as early as possible to Washington.

And that the managers of elections throughout the State will hold an election for members of a State Convention at their respective precincts, on the first Monday in September next, according to the laws of South Carolina in force before secession, and that each election district in the State shall elect as many members of the Convention as the said district has members of the House of Representatives—the basis of representation being population and taxation. This will give one hundred and twenty-four members to the Convention—a number sufficiently large to represent every portion of the State most fully.

Every loyal citizen who has taken the amnesty oath, and not within the excepted classes in the President's proclamation, will be entitled to vote, provided he was a legal voter under the Constitution as it stood prior to the secession of South Carolina. And all who are within the excepted classes must take the oath and apply for a pardon, in order to entitle them to vote or become members of the Convention.

The members of the Convention thus elected on the first Monday in September next, are hereby required to convene in the city of Columbia on Wednesday, the 13th day of September, 1865, for the purpose of altering and amending the present Constitution of South Carolina, or remodelling and making a new one, which will conform to the great changes which have taken place in the State, and be more in accordance with republican principles and equality of representation.

And that the Constitution and all laws of force in South Carolina prior to the secession of the State, are made of force under the Provisional Government, except wherein they may conflict with the provisions of this proclamation. And the Judges and Chancellors of the State are required to exercise all the powers and perform all the duties which appertain to their respective offices, and especially in criminal cases. It will be expected of the Federal military authorities now in South Carolina, to lend their authority to the civil officers of the Provisional Government, for the purpose of enforcing the laws and preserving the peace and good order of the State.

And further, he calls upon the good and lawful citizens to unite in bringing to justice all disorderly persons who are wandering about without employment or any visible means of supporting themselves.

This was also followed by a proclamation by Gen. Gillmore, announcing the appointment and proclamation of Gov. Perry, and ordering all persons in the military service of the United States to assist the Governor in carrying out the objects of his proclamation, and to abstain from hindering or impeding in any way the Union people of the State from the organization

of a State Government. Provost marshals and their assistants were designated as the only military persons entitled to administer the amnesty oath.

The election for members of the Convention was held on the first Monday of September, and characterized by great propriety and order. The vote in the city of Charleston was about one-third of that usually cast before the war. Citizens well known, and who had been in office before, were elected by an overwhelming majority over those on the "Union" ticket. Of the twenty members elected in the city, only one had been a secessionist before the war; the others had been Unionists or cooperationists.

A conflict between the civil and military authorities had existed from the first appointment of the Provisional Governor. It was finally ended by an understanding between the Governor and the commanding general—by an agreement that in all cases relative to freedmen and persons of color the courts of provost marshals should have exclusive jurisdiction, and that the civil courts should be opened under the provisional Government, and all civil and municipal officers be allowed to resume their official duties without interruption from the military authorities.

On September 18th the Convention assembled in the Baptist church at Columbia, and organized by the election of D. L. Wardlaw as President. Several measures, as preparatory to business, were adopted. Ex-Governor F. Pickens offered the following an ordinance, which was ordered to lie on the table:

We, the Delegates of the People of the State of South Carolina, in General Convention met, do ordain, That the ordinance passed in convention, 20th of December, 1860, withdrawing this State from the Federal Union, be and the same is hereby repealed.

The fortunes of war, together with the proclamations of the President of the United States and the generals in the field commanding, having decided that domestic slavery is abolished; therefore, under the circumstances, we acquiesce in said proclamations, and do hereby ordain implicit obedience to the Constitution of the United States, and all laws made in pursuance thereof.

On the next day Governor Perry sent an address to the Convention. In it he acknowledged the death of slavery, and advised the wise, just, and humane treatment of the freedmen, by which they may become as strongly attached to the whites as while they were slaves. Legislation was required to regulate the relative duties of employer and employé. The Governor suggested changes in the State Constitution, making it more popular and republican in form. It had been the reproach of South Carolina that it was less so than any other State in the Union. He was opposed to extending suffrage to the freedmen in their present ignorant and degraded condition, considering it as little less than folly and madness. He contended that this is a white man's Government and the white man's only; that the Supreme Court had decided that negroes were not citizens, and that each State had the unquestionable right to decide for herself who shall vote.

He suggested the election of Governor, members of Congress and Legislature, and Presidential electors directly by the people, and that the Legislature should be elected and convened in season to order an election for Congressmen before the first Monday of December. The future, he said, will be bright. As long as civilization continues, this great republic will flourish and increase in numbers, wealth, and grandeur, and in less than ten years we shall realize in the loss of slavery a blessing in disguise to ourselves and our children. He notified the Convention of the reestablishment of the civil law and courts.

In relation to the colored troops, he said:

It is a source of congratulation to know that the colored troops, whose atrocious conduct has disgraced the service and filled the public mind with the most horrible apprehensions, have been withdrawn from the interior of the State, and are to be placed in garrisons on the coast, where they can do no further mischief. In all my personal interviews with the President, and in all my despatches to him, I urged this course most earnestly. The white troops are, I believe, doing their duty beneficially to the country, in preserving the peace and good order of the State. It is thought that their presence among us for some time yet will be necessary, in order to enforce the relative duties of the freedmen and their employers.

The Convention was in session fifteen days. In that time it adopted resolutions rescinding the act of secession, abolishing slavery, correcting the parish system of representation, extending to the people further political privileges in the right of elections, and recommending to the Legislature to pass such laws as shall contribute to the interests of the State and of all the States. A new State Constitution was formed and adopted. It declared "all power is originally vested in the people, and all free governments are founded on their authority, and are instituted for their peace, safety, and happiness." With regard to the slaves, it said: "The slaves in South Carolina having been emancipated by the action of the United States authorities, neither slavery nor involuntary servitude, except for crime, whereof the party shall have been duly convicted, shall ever be re-established in this State." Representation in the Legislature is placed upon the joint basis of the amount of all taxes raised and the number of white inhabitants in each election district. The taxes are to be assessed on the actual value of property. The *viva voce* vote is substituted in the General Assembly for the suffrage by ballot. The term of the office of Governor is extended to four years. He is to be elected by the people, and possesses a veto and pardoning power. The administration of justice is to be conducted by Superior and Inferior Courts to be organized by the Legislature. An Inferior Court is to be located in each judicial district, and to be specially charged with the trial "of all civil cases wherein one or both of the parties are persons of color, and of all criminal cases wherein the accused is a person of color." The qualification for suffrage is

unchanged, except, as to aliens, no freehold is required.

The question of the competency of the colored race as witnesses, was in a measure considered. The following resolution was offered in the Convention, and referred to a committee:

Resolved, That hereafter colored persons and negroes shall be permitted to testify in all the courts of the State, in all cases where the rights of persons or of property of such persons may be concerned.

The committee reported the following ordinance:

We, the People of the State of South Carolina, by our Delegates in Convention met, do declare and ordain, and it is hereby declared and ordained, That hereafter colored persons shall be permitted to testify in all the courts of this State in all cases where the rights of persons or of property of persons of that class are involved.

A resolution was then offered, that the General Assembly should prescribe such rules of evidence and modes of trial as might be necessary. A debate ensued, in which all were agreed upon the cardinal point that some legislation was necessary to provide for the admissibility of the testimony of the freedmen into the courts, but they differed as to the mode in which such legislation should be effected and the proper time for making it. A special commission of two was appointed to investigate the subject, and report to the Legislature.

The following letter was received by the Provisional Governor from the Secretary of State at Washington:

DEPARTMENT OF STATE, WASHINGTON, Sept. 29, 1865.

To his Excellency B. F. Perry, Provisional Governor of the State of South Carolina, Columbia.

SIR: I have had the honor to receive, and submitted to the President, your letter of August 28th, in which you state, "I desire to be instructed as to my duty after the State Convention of South Carolina shall have formed a State Constitution abolishing slavery and popularizing the organic laws of the State. It is probable that the Convention will provide for the election of members of the Legislature and the election of Governor by the people on the second Monday in October." And in which you solicit answers to the questions: "When these elections have taken place is it my duty to convene this new Legislature as Provisional Governor, or are my functions at an end when the new State Government is organized? How long shall I continue to act as Provisional Governor? Do my functions continue until the State is admitted back into the Union?"

In reply, I have the honor to inform you that the President does not think it now necessary to anticipate events. He will expect you to report proceedings and events as they occur in South Carolina, carefully and freely, for the information of this Government. In any case you will continue to exercise the functions heretofore vested in you by the President until you shall be relieved from that duty by his express orders to that effect.

Congratulating you upon the favorable aspect of events in your State, I have the honor to be your Excellency's obedient servant,

WILLIAM H. SEWARD.

The Convention passed resolutions approving of the measures of President Johnson, and appointed a committee to visit the President relative to granting amnesty to Jefferson Davis,

Governor Magrath, and Mr. Trenholm, and adjourned.

In October an election was accordingly held for Governor and Lieutenant-Governor, and members of both houses of the Legislature. The candidates for Governor were James L. Orr and Wade Hampton. The total vote, the first ever given in the State for a Governor, was 18,885, of which Mr. Orr's majority was 667.

The Legislature assembled at Columbia on October 25th, and the Provisional Governor addressed a message to them. He said, that although his appointment was made several months after that of the other Provisional Governors, South Carolina was then as far advanced in the plan of reconstruction as any other State. By restoring those who were in civil office at the suspension of the civil government, he greatly expedited the reconstruction. This measure was objected to by the military authorities, but he was sustained by President Johnson.

He alluded to the new Constitution as popular and democratic, inspiring the people with more zeal and energy in developing the talent and resources of the State. He recommended fostering internal improvements, commerce, and manufactures, and the encouragement of foreign immigration. The State should not be dependent, as heretofore, on the Western States for horses, mules, cattle, hogs, bacon, lard, and beef, nor on the Northern States for furniture, agricultural implements, and clothes. They should raise, grow, and make every thing themselves. Now that slavery was abolished, labor was made more honorable, as well as more necessary.

Immediate provision must be made for the protection by Government of the freedmen. This is expected by the President and Congress, and such measures should be adopted as to remove all pretext for military rule.

The electors for President and Vice-President of the United States should be chosen by the people. An early day should be fixed for the election of members of Congress. Should those members elected be in Washington, with their credentials, when the clerk calls the roll, they cannot be excluded any more than those from Massachusetts. No man in South Carolina can take the test oath without perjury. It is not the policy of the President to enforce this, and he believes it will not be the policy of Congress.

He recommended the issuing of State bonds, selling them to pay the State debt, so as to avoid the present taxation. The reorganization of the militia is urged, the Secretary of State at Washington having given assurances that as soon as the State government is organized, all the troops will be withdrawn. He recommended also the reestablishment of the South Carolina College on the university system, and the reopening of the Citadel Academy for cadets. He opposed any act looking to a repudiation of the State debt. In conclusion, he asked them to look only to the future and not to the past.

A question soon arose in the Legislature as to the legality of any acts which they might pass. The Constitution required all bills to be signed by the Governor if he approved them, before they could become laws. But in this case there was no Governor to sign the bills. A special committee, to whom the consideration of the difficulty was referred, reported that, in their opinion, "it is competent for the General Assembly to consider and pass bills which may be submitted to the Constitutional Governor after he is qualified."

On the 27th the two commissioners appointed under the authority of the State Convention, to prepare and report to the Legislature what laws were rendered necessary and proper in consequence of the alterations in the state of affairs, made their report. The topics treated of were the domestic relations of persons of color, including those of husband and wife, parent and child, guardian and ward, and master and apprentice, the contracts for service, the regulations of labor on farms, the rights of the employer as between himself and his servant, the causes of discharge of a servant, the rights of the employer as to third persons, the rights of the servant as between himself and employer, the rights of servants as to third persons, the duties and obligations of house servants and others not in husbandry, the forms of contract, the rights and duties of mechanics, artisans, and shopkeepers, the eviction of servants, and the regulations for paupers, vagrancy, and idleness. Bills preliminary to the legislation induced by the emancipation of slaves, to establish district courts, and to amend the criminal law, accompanied the report. The commissioners were D. L. Wardlaw and Armistead Burt. The matter of the report became the subject of much debate at a later period of the session.

On the 7th the Provisional Governor sent the House the following message containing a correspondence with the authorities at Washington:

EXECUTIVE DEPARTMENT OF SOUTH CAROLINA, }
November 7, 1865. }

To the Honorable the Senate and
House of Representatives:

GENTLEMEN: I had the honor of receiving from the President of the United States the following telegraphic despatch on the 28th October last:

To B. F. Perry, Provisional Governor of South Carolina:
Your last two despatches have been received, and the pardons suggested have been ordered.

I hope that your Legislature will have no hesitation in adopting the amendment to the Constitution of the United States abolishing slavery. It will set an example which will no doubt be followed by the other States, and place South Carolina in a most favorable attitude before the nation. I trust in God that it will be done. The nation and the State will then be left free and untrammelled to take that course which sound policy, wisdom, and humanity may suggest.

(Signed) ANDREW JOHNSON,
President of the United States.

Three days afterwards I received the following telegram from the President, dated

WASHINGTON, October 31, 1865.

To Benjamin F. Perry, Provisional Governor:

There is a deep interest felt as to what course the Legislature will take in regard to the adoption of the amendment to the Constitution of the United States abolishing slavery, and

the assumption of the debt created to aid in the rebellion against the Government of the United States. If the action of the Convention were in good faith, why hesitate in making it a part of the Constitution of the United States? I trust in God that the restoration of the Union will not be defeated, and all that has been so far well done thrown away. I still have faith that all will come out right yet. This opportunity ought to be understood and appreciated by the people of the Southern States. If I know my own heart and every passion which enters it, it is my desire to restore the blessings of the Union, and to heal every bleeding wound which has been caused by this fratricidal war. Let us be guided by love and wisdom from on high, and Union and peace will once more reign throughout the land.

ANDREW JOHNSON.

To these telegraphic despatches I replied that the war debt of South Carolina was very inconsiderable; that our whole State debt, at this time, was only about six million dollars. That this debt was mostly incurred anterior to the war, in constructing railroads and building a new State House, with an old debt of long standing. That we had assumed no portion of the Confederate debt, and were responsible in no way for it. The expenditures which the State had incurred up to a certain period had all been settled and refunded by the Confederate States.

I stated that South Carolina had abolished slavery in good faith, and never intended or wished to restore it; that the Legislature was then considering a wise, just, and humane system of laws for the government and protection of the freedmen in all their rights of person and property, and that there was no objection to the adoption of the proposed amendment to the Federal Constitution, except an apprehension that Congress might, under the second section of that amendment, claim the right to legislate for the negro after slavery was abolished. I likewise stated that no official notice had ever been received by the Legislature of the proposed amendment to the Constitution of the United States.

In reply to this despatch I received yesterday the following telegram from the Secretary of State, dated

WASHINGTON, November 5, 1865.

To his Excellency B. F. Perry, Provisional Governor:

Your despatch to the President, of November 4th, has been received. He is not entirely satisfied with the explanation it contains. He deems necessary the passage of adequate ordinances declaring all insurrectionary proceedings in the State unlawful and void *ab initio*.

Neither the Constitution nor laws direct official information to the States of amendments to the Constitution submitted by Congress. Notice of the amendment by Congress abolishing slavery was, nevertheless, sent by the Secretary of State at the time to the States which were then in communication with this Government. Formal notice will immediately be given to those States which were then in insurrection.

The objection which you mention to the last clause of the constitutional amendment is regarded as querulous and unreasonable, because that clause is really restraining in its effects, instead of enlarging the power of Congress.

The President considers the acceptance of the amendment by South Carolina as indispensable to a restoration of her relations with the other States of the Union.

(Signed)

WM. H. SEWARD.

This formal notice of the proposed amendment to the Constitution of the United States has not yet been received. When it is, I will communicate the same to you. The amendment may be seen in the Acts of the last Congress, and is in these words:

"Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

"SECTION 2. Congress shall have power to enforce this Article by appropriate legislation." (Approved, February 1, 1865.)

A few days since I addressed a communication to Mr. Seward, Secretary of State, by mail, in which I repeated and enlarged on the views previously expressed to the President in reference to the objections which were entertained in South Carolina to

the proposed constitutional amendment. I am happy to find that the Secretary of State does not regard those objections as well-founded, but considers them "querulous and unreasonable." It is true that a plain, honest construction of the language of the amendment would be that slavery was abolished in the United States, and that Congress should simply enforce it. When this was done their legislation would be ended. They could not attempt under the authority given by this amendment to pass laws for the government of the freedmen in their free state. The Attorney-General of the United States and the President have both been understood as concurring in this opinion. It would, therefore, be well, in adopting the proposed amendment, to place on record the construction which had been given it by the Executive Department of the Federal Government.

It is manifest from the earnest, eloquent, and patriotic terms in which the President has urged the adoption of this amendment, that he regards, as he says, "all that South Carolina has done, and so well done, as thrown away, unless the amendment is accepted by the Legislature."

The Secretary of State is still more explicit in his language. He says: "The President considers the acceptance of the amendment by South Carolina as indispensable to a restoration of her relations with the other States of the Union." The reason why this exaction is made of the Southern States, after they have abolished slavery, is, that they might, otherwise, at some future day, change their Constitution and restore slavery in defiance of the Federal Government. You, gentlemen, have, at this time, the destiny of the State in your hands, and I feel assured that you will act calmly and dispassionately with a view to the peace, happiness, and well-being of South Carolina.

I addressed a communication to the Secretary of the Treasury at Washington a few days since, urging that in case the Legislature should assume the payment of that portion of the direct tax for which South Carolina is liable, that the Federal Government should receive her bonds for the same, or suspend the collection of the tax for the present year. I would advise the immediate assumption by the State of her portion of the direct tax, which is about three hundred and sixty-six thousand dollars. This will relieve the people from the immediate payment of it to the Federal tax collectors, and enable the State to make some arrangement in reference to it with the Treasury Department or Congress.

In my communication to the Secretary of State I urged the propriety of withdrawing the colored troops from the interior of the State to the forts on the sea-coast, and requested that white troops might for the present be retained in Charleston, Georgetown, and Beaufort.

I have forwarded the resolution you sent me the other day, in reference to the school-houses in Charleston, to Gen. Howard, and asked that they might be restored to the proper authorities. I made the same request in regard to the Military Hall in Charleston.

(Signed)

B. F. PERRY.

Again, on the 13th, the Provisional Governor sent a message to the Legislature, with a copy of the amendment of the Federal Constitution. The message was as follows:

EXECUTIVE DEPARTMENT, SOUTH CAROLINA, {
Nov. 13, 1865. }

*To the Honorable the Senate and House
of Representatives:*

GENTLEMEN: I have the honor of communicating to you the promised notice of the Secretary of State of the United States of the proposed amendment to the Federal Constitution abolishing slavery.

In the last message which I had the honor of sending you, I gave copies of the several communications which had passed between the President and the

Secretary of State and myself on this subject. You will remember that the construction to which this proposed amendment of the Federal Constitution was liable, and which made it objectionable to South Carolina, was entirely repudiated by the Secretary of State. I stated, too, in that message that the President and the Attorney-General of the United States were understood as concurring in the construction given to the second section of the amendment by the Secretary of State. I know that it will give you the greatest pleasure imaginable to do all that you can consistent with your honor and duty to the State to restore her once more to self-government and civil liberty, to peace and harmony, and to happiness and prosperity in the Union of States.

There can hardly be a doubt that this amendment will be adopted by three-fourths of the States, although you should refuse to accept it, and will become a part of the Federal Constitution. This consideration alone should lessen very much your responsibility in acceding to it, on the part of South Carolina, whilst it increases very much the evil and danger in rejecting it to the State.

In respect to what I have said in my last message to you, the destiny of the State is in your hands for woe or for weal, and I have an abiding confidence in your judgment and wisdom, and in your honor and patriotism.

I would remind you also of all that President Johnson has so nobly done for the Southern States, and that it is he who appeals to South Carolina in the name of God "not to throw away all that has so far been well done and defeat the restoration of the Union," but to be "guided by love and wisdom from on high, and Union and peace will once more reign through the land." B. F. PERRY.

The resolutions by which the constitutional amendment was adopted were as follows:

Resolved, therefore, by the Senate and House of Representatives of the General Assembly of the State of South Carolina, in General Assembly met, and by the authority of the same, That the aforesaid proposed amendment of the Constitution of the United States be and the same is hereby accepted, adopted, and ratified by this State.

Resolved, That a certified copy of the foregoing preamble and resolution be forwarded by his Excellency, the Provisional Governor, to the President of the United States, and also to the Secretary of State of the United States.

Resolved, That any attempt by Congress toward legislating upon the political status of former slaves or their civil relations, would be contrary to the Constitution of the United States as it now is, or as it would be altered by the proposed amendment; in conflict with the policy of the President declared in his Amnesty Proclamation, and with the restoration of that harmony upon which depends the vital interests of the American Union.

These were passed in the Senate by a vote nearly unanimous, and in the House by yeas 74, nays 28.

The Legislature appointed a day for the election of members of Congress, made some progress in the adoption of the measures reported by the commissioners, and adjourned from the 18th to the 25th of November. The following dispatch was sent by the President relative to the presence of the members of Congress at Washington:

WASHINGTON, Nov. 27, 1865.

To B. F. Perry, Provisional Governor:

I do not think it necessary for the members elect for South Carolina to be present at the organization of Congress. On the contrary, it will be better policy to present their certificates of election after the

two Houses have organized, which will then be a simple question, under the Constitution, of the members taking their seats. Each House must judge for itself the election returns and qualifications of its own members. As to what the two Houses will do in reference to the oath, now required to be taken before the members can take their seats, is unknown to me; and I do not like to predict. But, upon the whole, I am of opinion it would be better for the question to come up and be disposed of after the two Houses have been organized. I hope that your Legislature will adopt a code in reference to free persons of color that will be acceptable to the country, at the same time doing justice to the white and colored population.

ANDREW JOHNSON, President.

The Legislature, after a short recess, reassembled on November 25th. Soon after meeting, the Provisional Governor sent a message to both Houses. He stated that he had been ordered to remain in authority until otherwise directed from Washington, but he should recognize the Governor elect and make his communications through him. The English bondholders had proposed "that the whole of the arrears and the dividends to January, 1867, inclusive, should be funded into a bonded debt, carrying the same rate of interest as the bonds or stocks on which the arrears have accrued; that a sinking fund shall be established (accumulative) of two per cent. per annum, which on a five per cent. stock will pay off the debt in twenty-five and three-quarter years, and on a six per cent. stock in twenty-four years.

He further stated that the bonds of the South Carolina Railroad, amounting to \$2,000,000, endorsed by the State, would fall due in January, and no provision had been made for their payment. The early inauguration of the new Governor was urged, that he might sign the commissions of members of Congress elect. On the 29th, the Provisional Governor, in a farewell address, took leave of the Legislature, and Governor Orr was inaugurated. In his address, the newly-elected Governor said:

The war has decided, first: That one or more of the States of the Federal Union have not the right, at will, to secede therefrom. The doctrine of secession, which was held to be orthodox in the State Rights school of politics, is now exploded for any practical purpose. The theory of absolute sovereignty of a State of the Federal Union (from whence was derived the right to secede), which was believed almost universally to be a sound constitutional construction, must also be materially modified to conform to this imposing decision. In all the powers granted in the Constitution to the Federal Government, it is supreme and sovereign, and must be obeyed and respected accordingly. Where the rights of a State are disregarded, or unconstitutional acts done by any department of the Federal Government, redress can no longer be sought by interposing the sovereignty of the State, either for nullification or secession; but the remedy is by petition or remonstrance; by reason, which sooner or later will overtake justice; by an appeal to the supreme judicial power of the Union; or by revolution, which, if unsuccessful, is treason.

The decision was far more imposing and obligatory than if it had been pronounced by the Supreme Court of the United States. Had it been tried there, an effort to reverse it might have been made, because its members and opinions often change. But the

God of Battles has pronounced an irreversible judgment, after a long, desperate, and sanguinary struggle, and it would be neither politic nor patriotic ever again to invoke a new trial of the fearful issue.

The clemency which President Johnson has so generously extended to many of our citizens, in granting full and free pardon for participation in the late revolution, does honor to his statesmanship and to his sense of justice. He is the ruling power of a great and triumphant Government, and by his policy will attach by cords stronger than "triple steel" the citizens of one entire section of the Union to that Government which he has so long and so ably supported and maintained. He was well acquainted with the South—with her politics and politicians, and knew, however erroneous in his judgment may have been their political principles, that they honestly entertained the sentiments which they professed, and for which they perilled their all; and after failing in their end, when they proposed to return to their loyalty, that humanity and policy dictated that they should not be hunted down for ignominious punishment.

I shall give his policy of reconstruction an earnest and zealous support.

The war decided, second: That slavery should be totally and absolutely exterminated in all the States of the Union. The Convention of this State, with singular unanimity and promptness, accepted the result of the issue made, and declared in the fundamental law "that slaves having been emancipated by the action of the United States authorities, slavery should never be reestablished in this State."

The Legislature elected two Judges of the Court of Appeals, D. L. Wardlaw and John A. Inglis. The most important acts during the remainder of the session, of general interest, related to the public debt and to the freedmen. A communication from the Provisional Governor, through Gov. Orr, to the Legislature, stated that he had received two weeks previous a despatch from Secretary Seward, in the following words: "Upon reflection, South Carolina would not care to come again into the councils of the Union encumbered and clogged with debts and obligations which had been assumed in her name in a vain attempt to subvert it. The President trusts that she will lose no time in making an effective organic declaration disavowing all debts and obligations made or assumed in her name or behalf in aid of the rebellion. The President awaits further events in South Carolina with deep interest." In reply, the Provisional Governor said that it was impracticable to make any such organic declaration, as the State Convention had been dissolved after having done all that the President had requested to be done; that the war debt was a very small one, and could not be separated from the ordinary current expenses of the State; that South Carolina had been refunded by the Confederate States a large portion of her expenditures on account of the war; and that no one in the State had any right to complain of being taxed to pay this debt, as they were all guilty in incurring it. He further said that the estates of widows and orphans had been invested in this debt, as the safest investment which could be made for them, and that it would now be great injustice to this innocent and helpless class to disavow the debt.

Mr. Seward replied that while the objections were of a serious nature, the President could not refrain from awaiting with interest an official expression upon the subject. The Legislature referred the matter to a committee, who reported in favor of the appointment of a special committee to investigate, ascertain, and report at the next session. The Legislature also passed resolutions endorsing President Johnson's reconstruction policy, and further declaring that "all opposition to the General Government had permanently ceased in this State." The total debt of the State was \$6,668,080, redeemable at various periods.

But the great concern of the State at this time was the accommodation of labor to its agricultural interests. For this purpose it intrusted to a commission of two the duty of suggesting a code to the Legislature at this session. This commission made an extended report, as has been stated, for the regulation of labor and the protection and government of colored persons. Although the subject was largely discussed, final action was not taken during the sessions of the year. Some of the more important provisions of the report possess considerable interest. Persons of color are thereby defined to be all free negroes, mulattoes, mestizoes, freedmen and freedwomen, and their descendants through either sex. Those, however, who may have seven-eighths or more of Caucasian blood are deemed and declared to be white persons.

The rights and remedies respecting persons or property, and the duties and liabilities under the law, whether civil or criminal, which apply to white persons, are extended to persons of color, except where modified by the regulations instituted.

The first subject treated of is the relation of husband and wife. This relation is fully established and recognized. The evidence of its existence is declared to be cohabitation and reputation, or acknowledgment by the respective parties. Those who now live as such are held to be in legal marriage. Hereafter this which the law regards as a civil contract is required to be duly solemnized, either by a minister of the Gospel, the District Judge, a magistrate, or any other judicial officer.

All children heretofore born are declared to be legitimate.

The following are incompetent to contract marriage: males under twenty-one, and females under eighteen years of age, those who are paupers or a charge to the public, and apprentices or persons bound to labor or service by contract, until the expiration of such apprenticeship or term of service or labor.

The husband is forbidden under any pretext to abandon his wife; and in case he shall so do or fails to maintain her and his children, he shall, upon sufficient proof, be bound to service by the District Judge, from year to year, and the profits of his labor applied to their maintenance. Such an abandonment renders the

wife competent to engage for service and to have all the rights of an unmarried woman, except the right to recontract marriage. In case there should be two or more reputed husbands or wives, the parties are required to select, and the ceremony of marriage is to be performed.

The father is to support all of his children, whether they be born of one of his reputed wives, or of any other woman.

To regulate the relations of master and apprentice, the report provided that a child over two years of age may be bound by the parent, until, if a male, he shall obtain the age of twenty-one years, and if a female, eighteen years of age. If the child has neither father nor mother living in the district, or if the parents are paupers, that is, upon the public bounty, or unable to afford a comfortable maintenance, or vagrants, or convicts for infamous offences, or of such notoriously bad character that the child is in danger of moral contamination, then he or she may be bound by the District Judge or one of the magistrates. Males over the age of twelve years and females over the age of ten years must give their assent by signing the indentures.

The obligation of apprenticeship is not only to be under seal, and signed by the master, the parent and apprentice, if of consenting years, and attested by two credible witnesses, but in order to prevent imposition and wrong, is to be approved by the District Judge or magistrate.

The legal and moral duties that arise, are that during the term of indenture the person to whom he is bound, is to teach the apprentice the business of husbandry or some specified useful trade or profession; to furnish food and suitable clothing; to instruct in habits of industry, honesty, and morality, and to treat with humanity and discretion.

This relation may be dissolved by the death of the master, by an habitual violation or neglect of the duties imposed on him, or where, by his vicious conduct, the apprentice is in danger of moral contamination.

In all cases of alleged infringement of duty, or of misconduct on the part of master or apprentice, the matters in issue are to be decided upon reference to a magistrate.

It is also inserted that the master shall have authority to inflict moderate chastisement and impose reasonable restraint upon his apprentice; but this is a principle of law which prevails in the State, in reference to every case of apprenticeship; and which generally exists wherever this relation is established.

Against any attempted abuse of this power, the most stringent and ample provision is made; for it is declared that "in cases in which the District Judge shall" order the apprentice to be discharged for immoderate correction or unlawful restraint, the master shall be liable to indictment, and on conviction to fine and imprisonment within the discretion of the court, and also to an action for damages by the apprentice.

At the expiration of the term of service, the apprentice shall be entitled to receive a sum of not exceeding sixty dollars.

The provisions relating to contracts for service reported, were that all contracts for more than one week are required, in order to avoid uncertainty and confusion, to be in writing, to be duly attested before witnesses, and within twenty days of their execution to be submitted to and approved of by the Judge of the District Court, or one of the magistrates. Unless these requisites are complied with, the contract is not binding upon the servant. Where no term of service is expressed, it shall be until the 25th of December of the year in which it is made. Where no rate of wages is specified, on the application of either party, with notice to the other, the District Judge or magistrate decides what shall be a fair and just compensation.

The following colored persons are competent to contract for one year's service or labor: all who have no parent living in the district and are over ten years of age, and those who are not apprentices. Of course those who are minors contract through their parents if in the district, and those who are apprentices have already made engagements for the learning some art or trade. These contracts may be set aside whenever fraud or unfairness is exhibited, that is, whenever advantage has been taken.

The employer is compelled by law to perform his obligations, for whenever he neglects or evades his contract, he is declared guilty of a misdemeanor and liable to penalties upon conviction.

The hours of labor, in cases of husbandry, are fixed from sunrise to sunset, with proper intervals for meals and refreshment. The duties of those employed are, to give their attention to the property intrusted to their care, to protect it from injury, to be responsible for all losses occurring through their negligence, dishonesty, or bad faith, to be quiet and orderly in their quarters, to reside on the premises, to retire at reasonable hours, to remain at night on the farm and not to absent themselves without the written permission of the employer, to obey all lawful orders, to be honest and faithful, to be civil in deportment and diligent in business.

No work is to be exacted of them at night or in inclement weather, except in cases of absolute necessity. They are not to be kept at home on Sundays, except to take care of the premises, or under circumstances of emergency, and then such labor is to be performed in turn.

The master is bound in duty to protect his servant from violence and to assist him in obtaining redress for injury to his rights of person or property. The servant assumes the corresponding obligation of aiding his master in the defence of his person and premises.

The wages due the servant are preferred to all other debts, except the funeral expenses; nor is his contract ended with the death of the master, except with his express assent. On the expiration of the term of service, the master

is bound to give the character of one who has been in his service to any person who may make inquiry, and in case he shall wilfully and falsely represent it to be otherwise than it really is, either for moral qualities or for skill or experience in any employment, he shall be liable to an action for damages, to the party aggrieved. The master may discharge the servant on the ensuing grounds—the wilful disobedience of lawful orders; habitual negligence or indolence in business; drunkenness; gross moral or legal misconduct, and habitual want of respect or civility to himself, family, guests, or agents; but if the servant is wrongfully discharged from his service, he shall recover wages for the whole period of service according to the contract, whether or not his wages have been paid to the period of his discharge.

The servant is justified in departing the service and dissolving the contract for an insufficient supply of wholesome food, for an unauthorized battery upon his own person, or one of his family, for habitual drunkenness of the master, for invasion of his conjugal rights, for violent and menacing conduct, and for failure to pay wages when due. He is entitled to a certificate of his character at the termination of the contract.

So also provisions are made for those who are employed as house servants. Regulations are likewise created for the support and care of paupers, for the suppression of vagrancy and idleness, for the establishment of district courts, and of enabling all within the limits of the State to have some lawful and respectable employment, and to possess a fair, honest, and respectable livelihood.

The criminal law is carefully revised and placed in plain and intelligent language. On the subject of testimony it is declared that "in every case, civil or criminal, in which a person of color is a party, or which affects his person or property, persons of color shall be competent witnesses; and in every case either party may offer testimony as to his own character or that of his adversary, all parties to suits being allowed to give evidence."

In May the Chief Justice of the United States, Mr. Chase, being in Charleston, addressed an assemblage of freedmen. In allusion to the elective franchise for them, he said:

Major Delany has said that he heard me say in the hall of the House of Representatives at Washington, that I knew no reason why the hand that laid down the bayonet might not take up the ballot. If he had listened to me twenty years ago, in the city of Cincinnati, he might have heard me say substantially the same thing. But the colored man did not get the elective franchise because I said it then. Quite possibly he may not now. Certainly, however, events have progressed remarkably in that direction. If everybody in this city saw things exactly as I see them, if they felt as I feel, that it would be desirable, on account of the general interests, that every man should have the same rights before the law in the elective franchise as in every thing else, it would come to you very soon. But there is not that agreement. Having nothing to do with politics, I am not prepared to say what will be the action of the Govern-

ment. I am no longer in its counsels, and therefore do not know what it is prepared to do. I will only say this: I believe there is not a member of the Government who would not be pleased to see universal suffrage.

But I am not ready to say that the Government will now establish universal suffrage. This I do not know. If you are patient, and constantly show by your acts that you merit the right of suffrage, then you can be safely trusted with it. That in your hands it will be on the side of order and liberty and education, reasoning upon general principles, I can safely say you will get the elective franchise in a very short period. I trust it will not find you unprepared. But respect yourselves and respect the rights of all, and do your very best to show that you are, each and all of you, worthy to have it. You cannot get it by threats and misbehavior. You can get it by patience and perseverance in well-doing.

A State Convention of the delegates of the colored people was held in November, at which an address was issued to the white people of the State. The object of the Convention is stated to have been "to confer together and to deliberate upon our intellectual, moral, industrial, civil, and political condition, particularly as affected by the great changes in the State and country," etc. The following is an extract from the address:

We ask for no special privileges, or peculiar favors. We ask only for even-handed justice—for the removal of such positive obstructions and disabilities as past and recent legislation has thrown in our way and heaped upon us. Without any just cause or provocation on our part, we, by the action of your Convention and Legislature, have, with few exceptions, been virtually excluded—

1. From the rights of citizenship, which you cheerfully accord to strangers, notwithstanding we have been born and reared in your midst, and were faithful while your greatest trials were upon you, and have done nothing since which could justly merit your disapprobation.

2. We are denied the right of giving our testimony in the courts of the State, in consequence of which our persons and property are subject, the former to every species of violence and insult, and the latter to fraud and spoliation without redress.

3. We are also, by the present laws, not only denied the right of citizenship—the inestimable right of choosing who shall rule over us in the land of our birth, but by the so-called "Black Code" we are deprived of the rights which are vouchsafed to the lowest white profligate in the country—the right to engage in any legitimate business save under such unjust restraints as are imposed on no other class of people in the State.

4. You have, by legislative action, placed barriers in the way of our improvement in the arts and sciences. You have given us little or no encouragement to engage in agricultural pursuits, by refusing to sell us lands, while you are organizing societies to bring foreigners into the country, the clear intent of which is to thrust us out, or reduce us to a serfdom intolerable to us, and, as you will find in the end, ruinous to your own prosperity.

5. Your public journals wickedly charge us with destroying the products of the country since we have been made free, when they know that the country, and the products thereof, were destroyed by a desolating war of four years, in which we had no hand. How unjust to charge upon the innocent and helpless the very crimes which yourselves have committed, and which brought down ruin upon your own heads!

* This refers to a license or certificate that the mechanic has duly served an apprenticeship.

6. We simply ask that we shall be recognized as men; that there be no obstructions placed in our way; that the same laws which govern white men shall govern black men; that we have the right of trial by a jury of our peers; that schools be established for the education of colored children as well as white, and that the advantages of both colors shall, in this respect, be equal; that no impediments be put in the way of our acquiring homesteads for ourselves and our people; that, in short, we be dealt with as others are—in equity and justice.

7. We claim that we deserve the confidence and good will of all classes of men. We ask that the same opportunities be extended to us that freemen have a right to demand at the hands of their fellow-citizens. We desire the growth and prosperity of this State, and the well-being of all men, and we would be found ever struggling to elevate ourselves and add to the glory of the national character. We trust that the day is not far distant when you will acknowledge that our progress in social, intellectual, moral, and religious development entitles us to the highest commendation and respect, and that we shall be worthy to occupy, with the best in the land, positions of trust and power; when we shall realize the great truth that "all men are endowed by their Creator with certain inalienable rights," and that, although complexions may differ, "a man's a man for a' that."

Signed per order, and in behalf of the Convention,
THOMAS M. HOLMES, President.
JOHN C. DES VERNET, Secretary.

In the regulation of the internal affairs of the State the local militia were early organized as a police force, as in the other Southern States. On December 25th the Provisional Governor was relieved, and the authority in the State restored to the officers elected by the people. The Governor thus responded to these orders from Washington:

COLUMBIA, S. C., December 23, 1865.

The Legislature adjourned yesterday at noon. Gov. Perry has returned to his home in Greenville. Your despatch has been forwarded to him by mail.

It will be very gratifying to the people of South Carolina that her Government has been intrusted to officers of their own selection. In their name I thank you for the tender of coöperation of the Government of the United States when found necessary in effecting the early restoration and permanent prosperity and welfare of the State.

You may be assured of my unalterable purpose to aid in upholding the supremacy of the laws of the United States, and in advancing the honor, interest, and prosperity of a common country.

JAMES L. ORR, Governor of South Carolina.

On April 14th, the evacuation of Fort Sumter on the same day, four years previous, was celebrated by raising the same flag on the fort by Maj.-Gen. Anderson in presence of other officers of the army, and many of the clergy of New York and Brooklyn.

The following petition, indicating the degree of interest felt in the welfare of Jefferson Davis, was sent to President Johnson:

ABBEVILLE, August 23, 1865.

Hon. Andrew Johnson, President of the United States: We, the undersigned, ladies of Abbeville District, South Carolina, respectfully exhibit to your Excellency our desire to intercede in behalf of Mr. Jefferson Davis, the President of the late Confederate States. We have heard with much satisfaction that petitions of a like nature have been addressed to your Excellency from other portions of the country, and we entertain the hope that these united appeals for

mercy will not fall unheeded upon the ears of your Excellency.

In any event, it will be grateful to us to have thus testified our feelings for one whose faults, in our judgment at least, have not been past forgiveness. Called from the retirement of his home to a position which he did not solicit, but which his manhood forbade him to decline; illustrating by his conduct the highest devotion to principles, which were maintained with marked unanimity by his people; temperate in the hours of triumph, dignified and calm in the days of defeat, always just, always generous, always brave, we see in his conduct every thing to evoke sympathy, and nothing to merit the extreme punishment with which he is threatened. The same firmness and calm views of policy which, on repeated occasions, he displayed in resisting the cries which, in his region, were raised for sanguinary retaliation, we hope will now be exhibited, in disregard of the unfeeling agitation which seeks his life. We hope there will be a merciful remembrance of his poor wife, plundered and insulted after being torn away from his prison, and of his young children, whose prospects in life have been so terribly blighted.

Impelled by the feelings of our nature—which are ever excited by the misfortunes of the brave and the good, which have in all ages characterized our sex, which moved the Marys to be the last at the cross and the first at the grave—we earnestly beseech your Excellency to exercise, in behalf of Mr. Davis, all Executive clemency.

Grant our petition, and, besides finding in your own breast the reward which attends every virtuous deed, we sincerely believe that you may expect increase of your own renown, and of the honorable character which forms the strength of your country. For ourselves we will say, we will hold in grateful remembrance this act of generosity to the unfortunate, and will teach our children "to rise up and call you blessed."

SPAIN, a kingdom in Europe. Queen, Isabella II., born October 10, 1830; succeeded her father on September 29, 1833. Her apparent, Alfonso, Prince of Asturias, born November 28, 1857. The area of Spain (inclusive of the Balearic and Canary Islands) is 182,758 square miles. The population (inclusive of the above islands and of the Spanish population in Tetuan, on the coast of Africa) was estimated, in 1864, at 16,301,851. The Spanish dominions in America contain 1,032,062 inhabitants; those in Asia and Oceania, 2,679,500; those in Africa, 17,071. In the "Budget" of the financial year 1865 (July 1st) to 1866 the expenditures were estimated at 2,747,832,370 reals; the ordinary receipts at 2,186,983,330, and the extraordinary receipts at 562,376,960 reals.* The public debt, on March 1, 1865, amounted to 16,892,747,190 reals. The army numbered, in 1863, 234,261 men. The navy, at the close of 1864, consisted of 118 armed vessels, of 1,298 cannon.

The imports, in 1862, were valued at 1,679,812,703, and the exports at 1,110,532,270 reals. The merchant navy, in 1863, consisted of 4,859 vessels, carrying a burden of 395,270 tons.

Minister of the United States in Madrid, John P. Hale, appointed in 1865; Spanish minister in Washington, Gabriel Garcia y Tassara, appointed in 1865.

* One hundred reals are equal to \$4.83.

The movement of shipping, in 1862, was as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
Spanish.....	5,280	587,768	4,817	509,869
Foreign.....	5,504	1,086,400	4,811	948,771
Total.....	10,784	1,644,168	9,128	1,458,670
Coasting trade.....	58,670	2,900,259	59,071	2,767,464

The Cortes, which had been opened in December, 1864, adopted (March, 1865) a new law abolishing the seizure of journals, and the necessity of naming a responsible editor, and of furnishing caution money. Though less stringent than its predecessor, the new law did not satisfy the Liberal party, and a protest against it was signed by the editors of twenty-two Madrid journals. A proposal for electoral reform, brought forward with the object of terminating the withdrawal of the Progressists from political action, was opposed by the Government, and rejected by 160 against 105 votes.

On February 20th Marshal Narvaez read a bill, drawn up at the instance of the Queen, and offering the immense property forming the royal patrimony, with the exception of the royal residences and the estates entailed upon the crown of Spain, for sale for the benefit of the nation. The bill provides that seventy-five per cent. of the proceeds go to the public treasury, and twenty-five per cent. to the royal treasury, the purchase money of these estates being payable in four instalments. The bill was received with enthusiasm, and the Chamber unanimously agreed to a proposal for an address expressive of gratitude to the Queen. A committee was formed to draw up the address immediately. The sale was estimated to produce 600,000,000 reals. The whole Chamber, accompanied by the committee, went to the place to present the address to the Queen, expressing the gratitude of the country for the proposed sale of the royal property.

From April 8th to 10th, Madrid was in a state of great excitement. A demonstration of the students of the University, who intended to serenade the rector whom the Government had dismissed, called forth an interference of troops, who killed and wounded a number of persons. The greater part of the Madrid newspapers, viz., the "Iberia," "Nacion," "Bolsa," "Democracia," "Discusion," "Razon," "Española," "Reino," "Patria," "Contemporaneo," and "Novedades," described the events in colors most unfavorable to the Government, maintaining that the disturbance was altogether the work of *agents provocateurs* to gain political capital for the ministry. The majority of the Cortes, being adherents of the ministry, did not, however, hold the latter responsible for bloodshed.

In June a military conspiracy was discovered at Valencia. The authors of the plot were the colonel and officers of the regiment of Barce-

lona, garrisoned in the town. In the night of the 9th the captain-general of the province of Valencia, whose suspicions had been raised for some days, surprised at midnight the colonel, some officers, and several sergeants of the Bourbon regiment, assembled together at the barracks, and had them arrested. In the Chamber of Deputies it was explained on the part of the Government that information had been received from various quarters that Gen. Prim had intended to head the insurrection, and that therefore he had been ordered by the Government to return to Spain.

On June 19th Marshal Narvaez tendered his resignation as President of the Council, and on June 21st a new ministry was formed, composed as follows: President of Council and Minister of War, Marshal O'Donnell; Foreign Affairs, Señor Bermudez Castro; Interior, Señor Posada Herrera; Public Works, Señor Armijo; Colonies, Señor Canovas; Marine, Señor Zavala; Finance, Señor Alonso Martinez; Justice, Señor Fernando Calderon Collantes. On June 23d Marshal O'Donnell delivered a speech in the Cortes, defining the policy of his administration. The Government, he said, had decided upon recognizing the kingdom of Italy, and in preserving amicable relations with foreign powers. With regard to the home policy, Marshal O'Donnell announced the general amnesty for offences against the printing law, and stated that the ministry would shortly bring forward an electoral law, diminishing the qualification for the suffrage, and establishing elections by provinces, according to the law of 1837, and also a new and very liberal printing law. The rector and professors of the Madrid University, who were dismissed some time ago, would be restored to their posts. The electoral law proposed by the Government was adopted by both Chambers; in the House of Deputies by 171 votes against 27. The new law lowers the electoral franchise so as nearly to quadruple the number of electors, particularly in the great cities. The total number of electors according to the new law is about 800,000; in the city of Madrid, 85,000. The clergy have about 40,000 votes.

A new election of a Chamber of Deputies took place in November. The majority of the Progressist party and of the Democrats again decided to take no part in the election. The only notable exception among the leaders was Señor Madoz, who presented himself as candidate at Barcelona, and was elected. Altogether about 217,000 voted at the election. Of the successful candidates, 4 belong to the Progressistas; 20 to the "Neo-Catholics" (Ultramontanes, Absolutists); 30 to the "Moderados" (of whom Narvaez is the chief); the others (about 300) to the "Liberal Union" (Ministerial party).

The Progressistas defined their position by a manifesto issued on November 26th, in which they demanded the following reforms: Individual civil and religious liberty; great reductions

in the public expenditure; the abolition of the united duties and the reform of the customs tariff; decentralization and independence for the municipalities and provinces; equality before the law; the modification of the conscription laws; the extension of laws prevailing in Spain to Spanish possessions beyond the seas; liberty of the press and liberty of conscience; the complete secularization of education; and the constitution of 1856 as the basis for a constitutional monarchy which would command approval at home and esteem abroad. Gen. Espartero (now in his 75th year) gave his adhesion to this manifesto, emphatically declaring: "The committee may know that it can count upon my arm and my heart to defend these worthies and the constitutional throne." A part of the Progressist party were reported to be favorable to a change of the dynasty, and a union of Spain and Portugal into a new Kingdom of "Iberia," under the King of Portugal. This question was, together with other points of difference, the subject of a violent controversy between two Progressist papers, the *Iberia* and the *Soberania Nacional*, the *Iberia* declaring that it desired the realization of its principles, whoever might be the reigning monarch, and accusing the *Soberania* of wishing, before any thing else, to change the dynasty.

On September 22d disturbances took place at Saragossa, originating in the refusal of the peasants to pay the octroi upon provisions entering the city, demanding first the reduction of the tax, and subsequently, its total abolition. The demonstration became more serious on October 2d and 3d. On the latter of these days, the Captain-General of Valencia, Don Juan Zapatero, ordered the troops to fire upon the rioters, when order was reestablished. According to a report from the Progressist committee, six of the people were killed, and eighteen wounded. The disturbances were once more renewed on October 6th, but again speedily suppressed.

In December a new democratic and military conspiracy was discovered in Malaga, but the Government succeeded in preventing an outbreak.

In January, 1865, the ministry of Narvaez proposed to the Cortes the abandonment of the possession of San Domingo. The bill introduced by the Government was adopted in both houses, in the Senate by 93 votes against 89, in the House of Deputies by 155 against 68; and in May a royal decree announced the abandonment. (See SAN DOMINGO.)

The war with Peru was terminated in January, but followed in September by another against Chili, which in January, 1866, was again joined by Peru. (See CHILI and PERU.) In November (1865), the Spanish Minister for Foreign Affairs addressed a circular note to the representatives of Spain at foreign courts, relative to the war with Chili, approving the conduct of Admiral Pareja, and stating that the reply of the Chilian Government to the over-

tures of the Spanish admiral precluded the possibility of any further negotiations, even under the mediation of the diplomatic body at Valparaiso. The note renews the assurance that Spain does not aspire to the conquest of the South American republics, but declares that she will not permit her dignity to be outraged without exacting satisfaction.

The relations between Spain and the United States continued to be of a friendly character. On receiving the news of the assassination of President Lincoln, the Council of Ministers decided upon expressing to the United States Government the feeling of horror produced in Spain by this event and the attempt upon the life of Mr. Seward. Similar resolutions were unanimously passed by the Senate and the House of Deputies.

One of the chief features of the foreign policy of Spain, in 1865, was the recognition of the Kingdom of Italy. Marshal O'Donnell, when assuming the presidency of the ministry, announced the recognition of Italy as a chief point in his programme. Nearly all the bishops, including Father Claret (Bishop of Trajanapolis in *partibus*), the confessor of the Queen, entered a solemn protest against this measure, and Cardinal Puente, Archbishop of Burgos, resigned his office as ecclesiastical preceptor of the Prince of Asturias. The Government, however, remained firm, appointed a Spanish minister to Florence, and received an Italian minister at Madrid. The protests of some of the bishops were referred by the Government to the Council of State.

On December 27th the Queen opened in person the new Cortes. She announced the commencement of hostilities between Chili and Spain, the conclusion of a treaty recognizing the independence of San Salvador, and the recognition of Italy. Referring to the financial difficulties, the Queen spoke of the necessity of increasing certain taxes, and reducing the expenditures, in order to balance the expenditures with the revenue. Bills would also be laid before the Cortes, tending to promote municipal liberty, and for the prevention of the slave trade in the Antilles.

SUEZ, CANAL OF.* On August 15, 1865, a boat laden with coal passed through the ship-canal of Suez from the Mediterranean to the Red Sea, thus, for the first time, opening communication between the two seas. The canal thus opened is the small, or fresh-water one, and as yet small boats drawing less than six feet, can pass. At a general meeting of the shareholders of the Suez Canal Company in 1865, M. de Lesseps stated that the company had still an available capital of 180,000,000 francs; that the small canal, for navigation, would even next year have an amount of traffic lucrative to the company, and useful to commerce. The Grand Canal, he said, would be terminated in 1868.

* See ANNUAL CYCLOPEDIA for 1864, p. 2; and ANNUAL CYCLOPEDIA for 1868, pp. 524, 527.

The following is a statement of the progress of the works of the Suez Canal up to the end of 1865, made by Mr. Lange :

The western jetty at Port Said has advanced considerably, and now forms part of the isolated island, thus forming an uninterrupted pier of 4,800 feet long, with a depth of from nine to sixteen feet, the result of dredging operations. The number of vessels which have discharged their cargoes at this new town of Port Said, five years ago a blank and dismal waste, is 2,087. This includes all the vessels registered up to the 1st of July, 1865, and their cargoes being chiefly materials and provisions for carrying out this great work, it will be readily seen with what unabated vigor it is being pushed forward. All along the maritime canal the greatest activity prevails. Nor are the accessory fresh-water canals, meanwhile, neglected. At the end of December 80,000 Egyptian workmen were busy excavating the line of fresh-water canal between Bulbeis and Abassie. I ought to mention that this portion of the work is being completed by the Viceroy of Egypt, under the superintendence of the company's engineers. In clearing away the heaps of earth beneath which the rocks of Chalouf, in the Desert, have been buried for ages, our men discovered a quantity of marine shells. Remains of fish, and more particularly of the shark tribe, have also been brought to light. These highly interesting specimens have been carefully collected, and may materially aid geologists in determining the phases in the formation of the isthmus between the two seas. It is generally known that a passage between them has been effected, and that it is the intention of the Canal Company to throw it open to the commerce of all nations. Of course, for the present, and until we have obtained a depth of twenty-six feet, and a width proportionate to that depth, only the smaller class of vessels will be able to take advantage of the opening, and the Mediterranean ports may find their commercial geographical positions suddenly changed, and brought almost face to face with countries now the most remote from them.

SWEDEN and NORWAY, two kingdoms in Northern Europe, united under one king. Present King, Charles XV., born May 8, 1826; succeeded his father on July 8, 1859. Area of Sweden and Norway, 292,440 square miles. Population of Sweden, in 1863, 2,364,122; of Norway, in 1855, 1,490,047. The budget for the financial period from January 1, 1864, to December 31, 1866, estimates the ordinary annual revenue at 82,909,500 rix dollars; the extraordinary revenue at 35,558,360; ordinary expenditures, 81,250,000; extraordinary, 85,704,686. The public debt of Sweden, on December 31, 1863, amounted to 52,186,680 rix dollars. In the Norwegian budget for the period from April 1, 1863, to March 31, 1866, the annual revenue and expenditures are fixed at 4,770,000 (Norwegian) dollars each. The public debt was, in 1859, 7,651,800 dollars. The Swedish army consists of 124,807 men; and that of Norway of 85,115 (inclusive of 15,604 landwehr).

The value of imports and exports was, in 1863, as follows: Sweden, imports, 96,627,000 rix dollars; exports, 92,524,000. Norway, imports, 19,354,000; exports, 14,947,000 dollars.

The movement of shipping in the same year was as follows :

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Lasts.	Vessels.	Lasts.
Sweden.....	6,876	165,598	7,929	349,637
Norway.....	12,094	573,439	11,938	568,768
Total.....	18,470	744,087	19,911	918,455

The Swedish merchant navy, in 1863, consisted of 3,236 vessels, of an aggregate burden of 86,404 lasts; and that of Norway of 5,621 vessels, of an aggregate burden of 301,778 lasts.

The year 1865 is memorable in the history of Sweden, on account of the radical change effected in the Swedish Constitution. According to the old Constitution, the Diet consisted of four Chambers or Estates, namely, those of Nobles, of the Clergy, of Citizens (Burghers), and of Peasants. The chief provisions of the new reform bill introduced by the Government are the following :

"The Rigsdag is in future to consist of two Chambers only, which are to meet every year on the 15th of January, and cannot be dissolved until after they have sat four months. When the Parliament is dissolved, another must be convoked within a period of three months after such dissolution. The members of the first Chamber are elected for nine years, and are 119 in number, or in the proportion of one member for every 30,000 inhabitants. Their qualifications are a minimum age of thirty years, and a landed estate of 80,000 rix dollars, or an income of 4,000 rix dollars. They are to receive no pay. The members of the second Chamber are elected for three years, and are divided into town and country deputies, of whom the former are in the proportion of one to every 10,000 of the population, and the latter in that of one to every 40,000. There will thus be 50 of the former and 180 of the latter. These members are to be paid at the rate of 1,200 rix dollars for the ordinary session, and 10 rix dollars a day for the extraordinary ones. A bill which is not passed in both houses may not again be brought forward in the same session, and if the budget is rejected in either house the votes of the two houses together are to be taken, and the majority is to decide. A superintendent and a deputy superintendent of the judges and officials are to be elected by the Parliament, and also, every three years, six learned men for the purpose of securing the proper employment of the liberty of the press. The privileges of the nobility and clergy are maintained, and cannot be altered without the consent of those classes."

The Chambers of Peasants and Citizens passed the bill on December 4th. In the Chamber of Nobles a determined opposition was made to it, but chiefly owing to the influence of the Government, it was, on December 7th, passed by 361 against 294 votes. On December 8th the Chamber of Clergy unanimously adopted it. The adoption of the bill was received with demonstrations of great joy both in Sweden and Norway.

SWIFT, brevet Brig.-Gen. JOSEPH GARDINER, an American general, and civil and military engineer, born in Nantucket, Mass., December 31, 1783; died at Geneva, N. Y., July 23, 1865. Gen. Swift was the son of Dr. Foster Swift, a surgeon in the army, who died at New London, Conn., in 1835. He entered the army as a cadet at Newport, R. I., in 1800, and two years later became the first graduate of the Military Academy at West Point. He was then appointed second lieutenant in the U. S. corps of military engineers, and in 1807, having attained the rank of captain of engineers, he was appointed to the command of West Point. In February, 1812, he was chosen military agent for Fort Johnson, and succeeded to the rank of colonel and principal engineer the following summer. In 1812-'13 he was chief engineer in planning the defences of New York harbor, and of the army in the campaign of 1813 on the St. Lawrence River. February 19, 1814, he was brevetted brigadier-General for "meritorious services," and appointed Superintendent of the Military Academy November 16, 1814, holding that position only to the following January. He resigned November 12, 1818, and held the appointment of U. S. Surveyor of the port of New York from that year to 1827. From 1829 to 1845 he was a civil engineer in the United States service, superintending the harbor improvements on the lakes, and removed to Geneva, N. Y., where he resided until his death. In the winter of 1830-'31 he constructed the railroad from New Orleans to Lake Pontchartrain, through an almost impenetrable swamp, susceptible of neither draining nor piling, being, it is believed, the first railroad in the United States provided with an iron T rail. In 1838 Gen. Swift was chief engineer of the Harlem Railroad in New York, and in 1841 was honored by President Harrison with a mission to the British Provinces, with reference to a treaty of peace with Great Britain. In 1851 and 1852, with his son, McRay Swift, he made the tour of Europe. He has contributed many valuable papers to scientific journals on the exact and natural sciences and their practical applications.

SWINE, DISEASE OF (TRICHINOSIS OR TRICHINIASIS), a disease produced in swine by a parasite which infests their muscular tissues, and which may produce in the human subject who has partaken of the diseased flesh serious disease, and in some cases death. This parasite, *Trichina spiralis*, is not the only one which infests the intestines or flesh of the swine. The measles in pork are produced by the presence of the *Tenia solium* or tape-worm in its encysted stage. This measly pork being eaten by man, the encysted scolex or head set free attaches itself to the human intestines, and develops into that terrible pest, the tape-worm. Joints or sections of this passing from the bowels are eaten by swine, and thus reproduce the parasite.

The *Trichina spiralis* does not belong to this

highly organized and complex order of cestoides or encysted worms, but to the lower and simpler order Nematodea or round worms, of which the ascarides or pin-worms, and the oxyurides, are familiar examples. Trichinous pork contains the young worms either free or coiled up and enclosed in capsules within the muscular tissue, according to the length of time they have remained there. In shape they resemble the adult, but are smaller and sexually immature. Unless previously destroyed by cooking or other process, when the muscle containing the encysted worms is eaten, they pass the stomach uninjured and escape from their capsules if encysted by the digestion of the cyst. In the intestinal canal they grow rapidly, and become mature in a few days. Impregnation immediately follows, and the young begin to leave the female within a week, in the form of minute transparent worms. They may continue to escape for weeks, and in immense numbers. They bore at once into the intestinal cells, and penetrate to nearly all parts of the muscular system. They feed upon the muscular tissue, and after an indefinite period coil themselves up and are enclosed in a sac, which in time becomes cretaceous. In this quiescent stage they may remain alive for years, and after the death of their host may become mature in turn by entering the intestinal canal of some other animal.

The symptoms caused by their presence vary according to the number eaten and the stage of development. At first nausea, loss of appetite, and intestinal irritation. Afterwards debility, fever, œdema of the face, movements of limbs, pain, and sensitiveness of muscles on pressure. Lastly, great inflammation of intestines, with bloody stools, increased muscular pains, partial paralysis of muscles of deglutition, speech, and respiration, and finally death from exhaustion. If only a small quantity of the trichinous pork be eaten, the symptoms will be mild, and in all cases they will disappear when the worms have become quiescent or encysted in the muscular tissue.

The capsule, sac, or cyst, which encloses the trichina in the muscle, varies in size. The largest are about $\frac{3}{8}$ th of an inch long and $\frac{1}{16}$ th of an inch broad; it tapers at each end, and is usually, though not always, prolonged at each extremity into a very fine thread-like appendage. The fully developed trichina is a round worm $\frac{1}{8}$ th of an inch in length, and $\frac{1}{16}$ th of an inch in thickness, and is usually found coiled upon itself. The young, which penetrate the intestines and seek their feeding-ground in the muscles, are much smaller, but very active. The number of these animals is sometimes astonishing. In a cubic inch of ham the number has been estimated at 85,000. We give below (Fig. 1) a section of muscular tissue with trichinæ encapsuled, as seen by the naked eye; and (Fig. 2) a portion of the same with the encapsuled trichinæ magnified fifty diameters.

The female brings forth from sixty to one

Fig1

hundred live trichinae, and the process is repeated twice or three times during the lifetime

Fig2

of these trichinae, a period probably of from two to three weeks. It is said by careful observers that the female worm gives birth to from two to three hundred young. The parent parasites never leave the stomach and alimentary canal. Fig. 3 represents the full-grown male and female trichinae, magnified two hundred diameters.

Fig.3

1. Full-grown male trichinae. 2. Full-grown female, in the act of extruding the young *alivae*—magnified two hundred diameters.

Figure 4 represents the trichinae in a free state, magnified fifty diameters.

Fig4

Figure 5 represents them elaborating their capsules, also magnified fifty diameters. They

Fig5

avoid the brain, lungs, and liver, and in only a single instance has one been found in the substance of the heart. Their perforation of the stomach and bowels often gives rise to acute diarrhoea and dysenteric symptoms, and where they attack the serous membranes lining the abdominal walls, symptoms of peritonitis are added. This inflammation of the serous membrane, if it does not prove fatal, leaves the intestines firmly glued together. The muscles of the chest and anterior portion of the neck, and those of the back and extremities, are those in which they seem to find their most congenial resting-place. It is somewhat remarkable that children suffer much less than adults from the incursions of these parasites, and in their case they seldom prove fatal, while among adults from twenty-five to seventy-five per cent. of those attacked die. The muscles upon which this animal has fed become useless in proportion to the number of ultimate fibres which are destroyed. When it is remembered that a single ounce of flesh may contain trichinae enough to produce in eight days 3,000,000 young, it is not surprising that the entire substance of the abdominal muscles should be sometimes found consumed.

The history of the discovery of this parasite is interesting as exhibiting the carefulness and thoroughness of scientific research. About the year 1832 several English physicians noticed in lean flesh a minute yellowish white granule, which is the adventitious shell enclosing the worm. These Hilton, an English anatomist, supposed to be animals; but the zoologist Owen was the first who described and named the worm itself—*Trichina spiralis*. This was in 1835. Precisely as the yolk and white of a hen's egg are not visible through the shell which contains them, so with the trichinae. It is frequently from one-third to one-half a line long, measured when its body is uncoiled; but, from its transparency, it cannot with the naked eye be recognized as having the structure of an animal. This, however, can readily be seen under a lens of fifty or sixty diameters. A number of observers have found this animal in the persons of natives of England, France, Germany, Denmark, and North America. The diseases it occasions, and the deaths owing to its presence in the flesh of human beings, have for years engaged the attention of the medical men of Germany, and have at several periods alarmed the people of that country. The epidemic of this disease which recently occurred

in Hedersleben is similar to several epidemics, or groups of cases of the disease, which have occurred since the year 1859. They arise from the penetration into, and lodgment in, various parts of the living human body, particularly the muscles, of the young trichinæ.

The history of the investigations of the last ten years, of the life of the animal, and the characteristics of its career, comprises the accounts of a number of observers who undertook to ascertain both its natural history and the consequences of its becoming an inmate of the human body. In 1860 Prof. Virchow, of Berlin, conducted a series of experiments with the trichinæ (consisting of feeding the meat which contained them to certain animals, under careful observation), by which he acquired all that we know of the mode and consequences of their introduction into the living body. The infestation of the human body has as yet only been found to occur from eating the flesh of the pig. But the trichinæ have been found in other animals usually regarded as strictly herbivorous, as moles, etc. Special investigations have, however, proved that these animals consume smaller animals, as field-mice, ground-worms, etc., and hence are flesh-eaters—being in this respect like rats, mice, etc. Other animals, such as rabbits, may be infested by feeding them the flesh containing trichinæ, but nevertheless the only flesh man consumes which contains the trichinæ, in the order of nature, is that of the pig.

In the year 1863 there was a wide-spread fear, derived from the opinion of various writers, that the meat of plant-feeding animals may contain the trichinæ, and the authorities of Merse announced that beef was not exempt from trichinæ, but as yet it is doubtful if *trichinæ have ever been observed in beef*; and even if, as supposed, the trichinæ disease was contracted from eating it, if it was obtained from the same butcher who sold pork containing trichinæ, it must be ascertained whether the beef had not become infested by lying in contact with the pork. So far as scientific investigation teaches us, neither in beef nor mutton have trichinæ been found.

From the fact that small, round worms, similar to trichinæ, exist in the muscles of the eel and frog, various authors have supposed them to be far more general in their distribution than Virchow and Leuckhardt assert. The rain-worm was asserted by Laugenbach to contain trichinæ, and the pig was supposed to become infested from devouring these; but careful investigation showed that the microscopic worm which infested the ground-worm was that long known as *Acaris minutissima*. Again, Schachte has stated that some vegetables, and especially the root of the sugar-beet, contained trichinæ, but although oxen fed upon bad beets have sickened and died in numbers, the trichinæ have never been found in their flesh, as before stated. We repeat that, so far as ascertained, the pig's flesh is the only flesh man consumes

which contains trichinæ. How, then, does the pig become infested? The supposition that they have their genesis in his body, and are not taken in his food, is totally inadmissible. Researches show that there is every probability that the pig neither derives the trichinæ from the animals nor vegetables he devours, but from the fecal matters he consumes. Hence, it is probable that at all times particular, individual pigs have been affected, and that refuse matter from the bowels of whoever may have consumed his flesh may have been consumed by other pigs, and the disease thus spread and involved a large number of people. Most of the epidemics of trichinæ disease have occurred in Saxony, where the pigs are fed in styes. It is very probable that pigs may infect pigs, for the contents of the intestines of one which contains pregnant trichinæ may be eaten when expelled by another pig. We may consider it established, therefore, that, in the common course of affairs, trichinæ can only be found in the carnivora. For we have seen that the intestinal trichinæ produce living young which migrate into the flesh and then attain their further development. They cannot leave the meat in any other way than after it has been eaten, and this regular progression from the intestine into the muscles, and from the muscles into the intestine, is only possible in meat-eaters. This order of the infestation may be here stated under three cardinal points:

1. The eaten trichinæ remain in the intestines unless expelled by purgation, and never enter the muscles.
2. They produce living young, which enter the muscles.
3. The young which have entered the muscles grow there, but do not multiply.

The chances of injury to the meat-eater are in proportion to the number which enter the intestines, and the danger is in the production of young by the intestinal trichinæ.

Recently, Dr. Perry, a physician of Brooklyn, L. I., who has been engaged for some years in sanitary investigations, stated to the Metropolitan Board of Health of New York that trichinæ have been found in the beef of the cows fed on swill at the distillery stables on Long Island. He states that the pigs fed on the swill and kept in filthy styes are largely trichinous, and that the rats which are very numerous in these stables and styes become filled with trichinæ; the cows devour the excretions of the rats with the swill, and thus take the disease. This seems reasonable, and it is not impossible that, though ordinarily graminivorous animals are not subject to the disease, these swill-fed cows may be exceptions.

The first cases of death from trichiniasis, of which we have positive proof, though doubtless thousands may have occurred before attention was called to it, took place in 1815. The history of these cases is curious and interesting. In the summer of 1863 an elderly person was being operated on for a tumor of the neck by a

German surgeon. During the operation the bared muscles were observed to be abundantly supplied with the characteristic shells or cysts of trichinæ. The patient related, in reply to a question whether he had ever been very sick, that in the year 1815, with the other six members of a commission for the inspection of schools, he ate a meal of ham, sausage, cheese, etc., at an inn. All who ate of these provisions soon after fell sick and died, except the relator himself. Suspicion fell upon the inn-keeper. A judicial investigation was held, but without result—precisely as it would be now if we had not that knowledge of the trichinæ we possess. And in this case the survivor might have gone to his death and yet nothing have ever been known, in his particular case, of the infestation by trichinæ, which had proved fatal to his six associates, had it not been for the knowledge science had furnished many years after that fatal meal was eaten.

In June, 1851, in the neighborhood of Hamburg, several well persons having eaten ham, fell sick. Three of them died, and others were long in a critical state. A judicial investigation was held without satisfaction. Ham poisoning was supposed, but long afterwards it was shown that the symptoms and other circumstances pertaining to the sickness and death of these people, were precisely similar with those subsequently ascertained to be trichinæ infestation.

We come now to the occurrence of epidemics of this disease. Zenker first observed such an epidemic in and near Dresden, and showed the trichinæ found in the ham and sausage made from one particular pig. This pig had been butchered on a farm near Dresden. The butcher and owner of the farm, and other people, had fallen sick, and a previously perfectly healthy servant-girl had died. In her body an abundance of trichinæ were found. With the finding of the trichinæ in the muscles of her body, Virchow commenced a series of experimental observations. These may be briefly stated. A rabbit fed with trichina-flesh from this girl died in a month, and its flesh was found full of them. Some of this flesh was given to a second rabbit, which also died in a month. With this meat three other rabbits were fed. Two of these died at the end of three weeks, and the third in the fourth week. Lastly, the flesh of these animals dead of trichinæ was fed to another rabbit. It ate but very little, yet died at the end of six weeks. In all of these the muscles, after death, were found filled with trichinæ, and even in the smallest particle of the meat several were found. It is to be observed that trichinæ had never been found in these animals unless they had been previously fed with the trichinæ-containing meat. Their living flesh was examined before they were fed, and no trichinæ were found in them; yet a few weeks after they were fed with the meat, the muscles of the same animals were found filled with trichinæ.

In the district of Magdeburg the cases of this

disease spread over a period of four years. Since the year 1859, a whole series of epidemics of this disease have been observed. They occurred at Plauen, Calbe-on-Saale, Quedlinburg, Burg near Magdeburg, Weimar, and Hettstadt near Eisleben, and other places.

In 1861 a woman was admitted to the Altona hospital with a cancer of the breast of twelve years' standing, which was removed, and, strange to say, on microscopic inspection, found to contain a considerable number of trichinæ. This led to an inquiry which gave the following information: In 1856 she was residing in the city of Davenport, Iowa, with her brother, and taken suddenly ill with gastric and rheumatic symptoms, together with oedema and partial paralysis. Convalescence was very protracted, and she never recovered the free use of her fingers at the piano. Her brother was attacked with similar symptoms at the same time, but they were much less severe. After her death at the hospital in 1864, many of the muscles were found to contain encysted trichinæ, the capsules being very cretaceous. Portions of this tissue were given to a cat which was kept in confinement, and after its death, on the sixteenth day, its muscular system was found crowded with free trichinæ of various sizes, all within the enlarged tubes of the sarcolemma. There seems to be no doubt that this was a case in which the trichinæ remained alive seven or eight years, and were capable of reproducing the disease after this long hybernation. Virchow relates another case still more remarkable, where the worms were living after thirteen and a half years, and on being removed from their cretaceous prisons, moved actively when placed in the sun, and were found capable of reproduction within the intestinal canal of a rabbit. As to the period at which the capsules are formed within the sarcolemma, or when the cretaceous formation begins, nothing definite is known.

The symptoms, progress, and the terrible fatality of the disease, are well exemplified in the history of the Hettstadt tragedy, which is taken from a British medical journal.

This village is situated near the Hartz Mountains, in Germany. An annual festival was celebrated there some two years since, and one hundred and three persons sat down to a dinner, the third course consisting of *rostensurste* and *gemuse* (sausage and vegetables). The sausage had been prepared beforehand for this special occasion. The steward who had been commissioned to furnish the pig for this purpose, gave the butcher a lean, ill-conditioned one, instead of the thrifty one which had been bargained for. The day after the festival, several persons who had participated in the dinner were attacked with pain and irritation of the intestines, with loss of appetite, fever, and great prostration. The number increased from day to day, and an epidemic of typhus or septic fever was apprehended, as the symptoms began to assume that character. However, as the disease progressed, the symptoms assumed a different type, and to diarrhoea, dysentery, and fever, were added peritonitis, circumscribed pneumonia, and paralysis of the abdominal and intercostal muscles with those of the neck. Then the typhus theory was abandoned, and

some unknown poison was assumed to be at the bottom of it. Under this conviction, every article of food and material used in connection with the dinner was rigidly examined. By this time the trichinæ had reached the muscles of the calf of the leg in some of the victims, and Zenker's description of the disease was called to mind. The remnants of the sausage were examined, and found to be literally "swarming" with trichinæ. Portions of muscle from the calf of the leg of the affected ones were examined under the microscope, and were found literally full of *free* trichinæ. These were the progeny of the *encapsuled* ones which had escaped the smoking and frying process to which the sausage had been subjected.

No less than eighty-three of the above-mentioned number died within a few weeks, and the surviving twenty, at last accounts, were still lingering in agony, and apprehensive of a similar fate.

This awful catastrophe at Hettstadt awakened sympathy and fear throughout all Germany, and many eminent medical men were consulted in the interest of the sufferers, but none could bring relief or cure. With an obstinacy unsurpassed by any other disease, trichiniasis surely carried its victims to the grave.

Many *vermifuges* were employed, with the hope of removing the parasites still in the alimentary canal. Picric acid was employed, until its effects seemed as dangerous as the disease itself. An examination of the bodies after death showed the trichinæ to have been unaffected by any of the remedies employed. The terrible conviction now fastened itself upon the minds of all who witnessed these scenes, that a person afflicted with this parasite was doomed to die the slow death of exhaustion from nervous irritation, fever, and paralysis of all the voluntary muscles.

Since the Hettstadt tragedy the public mind in Germany has had little rest from apprehension of this terrible scourge. A wholesale poisoning soon after occurred in Offenbach, a manufacturing town in Hesse-Darmstadt. Upwards of twenty persons were poisoned by eating trichinous pork, several of whom have died. But Hettstadt, with its tragedy and appalling concomitants, is eclipsed by the late visitation at Hedersleben, another German village, where three hundred inhabitants partook of trichinous pork, and at this writing full one hundred are in their graves. The butcher slaughtered four pigs, which were sold to the villagers. The butcher and his wife, partaking of the same meat, became themselves the earliest victims. A very injudicious custom seems to have obtained in this village, as well as in many other parts of Germany, namely: that of eating pork in a raw state, cut fine and spread upon bread. Although the scenes at Hettstadt were still fresh in the public mind, and the very uniform character which the symptoms always present was well understood by the medical profession generally, yet the people, through fear and ignorance, fled from what they believed to be a visitation of *cholera*. The consequences can easily be imagined. Many were seized with the disease, and died on the highways. The irritation of the stomach, vomiting, and diarrhœa, might well be taken for the premonitory symptoms of the above disease by the mass of the people. Indeed, the village doctor was himself misled, as he treated the sufferers with opium and astringents. This treatment was evidently

intended to control the diarrhœa; but it proved fatal to the patients, by confining the parasites in the stomach and alimentary canal until they had an opportunity to pierce through the walls. Out of twenty-eight persons treated in this manner, twenty-seven died. One very remarkable fact has been noted in connection with the epidemic at Hedersleben, namely: that as yet no *children* have died of the disease, all having made a good recovery.

We have already seen that one of the German cases originated in this country, but it is not till recently that we have had any well-authenticated cases of death occurring from the disease in this country, though the encapsuled trichinæ have often been found in the muscles after death, by physicians who were conducting autopsies.

In the "American Medical Times" of February 20, 1864, a case is reported by Dr. Schnetter, in which a whole family was poisoned by eating trichinous pork. The father was the only one in whom the poison proved fatal. This case occurred in New York city. The Buffalo "Medical Journal" contains the account of two fatal cases occurring in the western part of the State. A man and his wife, residing in the village of Cheektowaga, Chautauqua County, N. Y., were found to be affected by an "apparently acute rheumatism, of a peculiar character." Dr. Krombein, the attending physician, suspected trichinæ, and the patients having shortly after died, a microscopic examination was instituted by Drs. Krombein and Homberger, which demonstrated the existence of the parasite in great numbers. The specimens of muscle taken from the bodies of the dead, together with a remnant of the sausages of which they had partaken, were subsequently examined by Dr. J. Lathrop and Professor George Hadley, under the microscope, and trichinæ found in both. In the human muscle they were *free*; in the sausage, encysted. Other members of the family were affected, but probably did not eat enough to prove fatal.

Dr. Dingler reports two cases in Marietta, Ohio, and Dr. Herman Keifer, of Detroit, Michigan, gives in the "Detroit Medical Review" a very marked case in a young German woman, twenty-one years of age, which proved fatal about four weeks from the first attack. It is by no means impossible that the mysterious disease at Willard's Hotel, Washington, may have arisen from this cause.

The number of swine affected by this disease is probably very small. In Brunswick, Germany, out of twenty thousand swine examined, but two were found to be trichinous; but as we have seen, the flesh of a single hog affected by this disease has caused the death of one hundred persons. A recent examination made by a committee of the Scientific Academy of Chicago of swine slaughtered in that city, developed the fact that out of 1,394 animals examined, encysted trichinæ were found in twenty-eight, or nearly two per cent. of the

whole number. As the swine slaughtered at Chicago are, for the most part, brought from the country, where they have been fed on corn, mast, and other wholesome food, it is hardly probable that those slaughtered in other cities would show a smaller proportion. There exists in Germany a habit, occasionally practised here, of eating portions of lean pig's flesh (ham or sausages) uncooked, with bread. There is great danger in this, for the only preventive of infestation by those who will eat swine's flesh, consists in having it well and thoroughly cooked. Ham is more generally affected than any other portion of the carcass of the swine, and it is only by raising the temperature of the whole of the meat in cooking at least to 165° F., that the encysted parasite can be destroyed. Kuchenmeister, Hübner, and Lisinger, German chemists and physiologists, have made extensive series of experiments on this subject, and have ascertained that in most instances of cooking, especially of boiling entire hams, the whole of the meat is not raised to this temperature, and that the trichina protected by its cyst retains its vitality after cooking. They lay down the following positions as ascertained by these experiments:

1. That trichinæ are killed by long immersion in the brine of the meat, and by twenty-four hours *hot* smoking of sausages.

2. That they are not killed by three days' *cold* smoking, and the boiling of meat for making sausages does not certainly kill them.

3. A long keeping of cold smoked sausages will destroy the life of the trichinæ.

It might be well if here, as in some portions of Germany, the pork were inspected by a competent inspector, with a microscope, before packing. The hams and bacon, or middlings, are the only portions which need to be examined, for if there are no trichinæ there, there will not be any in the carcass.

SWITZERLAND, a Federal Republic in Europe. The present Constitution, which bears date September 12, 1848, vests the legislative authority in a Federal Assembly, consisting of two Chambers, a "*Ständerath*," or Council of States, composed of two members from each of the twenty-two cantons, and a "*Nationalrath*," or National Council, consisting of deputies (at present one hundred and twenty-eight) chosen in direct election, at the rate of one deputy for every twenty thousand souls. New elections take place every three years. Every citizen who is twenty-one years old has the right to vote. The executive power is deputed to a "*Bundesrath*," or Federal Council, consisting of seven members, who are elected for three years by the Federal Assembly. The Federal Council chooses annually out of its members a President and Vice-President. On November 6, 1865, the Federal Council elected M. Knüsel, of Lucerne, President of the Confederation for 1866, and M. Fornerod, of Vaud, Vice-President.

The area of the republic is 15,933 square

miles. The population of the twenty-two cantons was, on December 10, 1860, as follows:

Zurich.....	266,265	Appenzell } Exterior. 48,481	
Berne.....	467,141	} Interior. 12,000	
Lucerne.....	180,504	St. Gall.....	180,411
Uri.....	14,741	Grisons.....	90,718
Schwytz.....	45,089	Argovia.....	194,208
Unterwald } Upper.. 18,876		Thurgovia.....	90,080
} Lower.. 11,526		Tessin.....	116,848
Glaris.....	88,863	Vaud.....	218,157
Zug.....	19,608	Valais.....	90,792
Fribourg.....	105,528	Neuchâtel.....	87,869
Soleure.....	69,268	Geneva.....	92,876
Basle } Town..... 40,683			
} Country..... 51,582		Total.....	2,510,494
Schaffhausen.....	85,500		

With regard to religious denominations the inhabitants were divided, in 1860, as follows: 1,023,430 Roman Catholics, 1,476,982 Protestants, 5,866 Dissidents, 4,216 Israelites, and other non-Christians. Almost exclusively Roman Catholic are the cantons of Uri, Schwytz, Unterwald, Zug, Appenzell Interior, Tessin, Valais; while in Lucerne, Fribourg, Soleure, St. Gall, and Geneva, the Roman Catholics constitute a majority.

The largest cities are Berne, the Federal capital, with 29,016 inhabitants; Geneva, with 41,415; and Basle, with 37,918.

The number of deputies sent to the National Council by the several cantons is as follows: Zurich 13, Berne 23, Lucerne 7, Uri 1, Schwytz 2, Unterwald (Upper) 1, Unterwald (Lower) 1, Glaris 2, Zug 1, Fribourg 5, Soleure 5, Basle City 2, Basle County 3, Schaffhausen 2, Appenzell Exterior 2, Appenzell Interior 1, St. Gall 9, Grisons 5, Argovia 10, Thurgovia 5, Tessin 6, Vaud 11, Valais 5, Neuchâtel 4, Geneva 4.

In the budget for 1866 the revenue is fixed at 18,716,244, and the expenditures at 19,415,000 francs.

Amendments to the Federal Constitution, to become valid, must be accepted separately, not only by a majority of Swiss citizens, but by a majority of the cantons.

The Federal Assembly, in its session beginning October 23d, resolved to submit to a popular vote nine amendments to the Federal Constitution, viz.: 1. Uniformity of weights and measures. 2. Free Establishment of Swiss Jews. 3. The right of voting in communal affairs by citizens settled in other cantons than their own. 4. The enactment of a Federal law regulating conflicts respecting taxes and the civil relations of citizens established out of their own cantons. 5. The right of voting in cantonal affairs by citizens settled in other cantons than their own. 6. Religious liberty. 7. Prohibition of certain kinds of punishments. 8. To declare the Federal Assembly competent to establish legal provisions for the protection of literary and industrial property. 9. To declare the Federal Assembly competent to pass laws against lotteries and gambling-places. The Federal Council fixed the 14th of January, 1866, as the day for the popular vote upon these amendments. In April the Federal Council forwarded an address of condolence to the American people, and to the family of Mr. Lincoln.

T

TAPPAN, ARTHUR, an eminent American merchant and philanthropist, born in Northampton, Mass., May 22, 1786; died at New Haven, Conn., July 23, 1865. While yet an infant he barely escaped death by suffocation from being locked up in one of the folded bedsteads which were in common use in those days. When discovered, life was almost extinct. A headache, to which he was subject daily through life, may be ascribed to this accident. He left home at fourteen, and served seven years—according to the custom of the times—as “apprentice” to a hardware merchant in Boston; and when he came of age set up business in Portland, but soon removed to Montreal, as a larger field, where he entered into a general importing line with much success.

On the breaking out of the war of 1812, all Americans in Canada were required to take the oath of allegiance to the king, or leave the country. Choosing the latter alternative, Mr. Tappan withdrew at short notice and at a great pecuniary sacrifice.

In 1814 he engaged, in company with his brother Lewis—then living in Boston—who furnished the capital, in the business of importing British dry goods in New York. The new firm were successful the first year, but soon after losses came upon them which swept away their profits and most of their capital. The partnership having been dissolved, Arthur continued the business at the same place, selling chiefly for cash. His method of conducting his business was peculiar, and called out many predictions of failure. Buying his goods on a credit of from four to six months, he sold them at cost for cash, looking to the interest of the money thus obtained as his source of profit. In spite of all predictions to the contrary, however, he prospered, and gradually went into a credit business, which he continued to carry on with success for twenty years. The great commercial storm of 1837 forced him to suspend payment. He made an arrangement with his creditors, and paid, within the time agreed upon, the total amount of his debts, \$1,100,000, much of it by raising money at great sacrifices, when it was a common thing to hire money at two and a half per cent. per month. The struggle was too much to recover from, and in 1842 he passed through the process of bankruptcy, in which he ordered every thing he had to be sold, even to his wife's gold watch. Some years afterwards he became interested in the “Mercantile Agency,” first established by his brother Lewis, and from this was able to acquire the means of a comfortable support for his family. But well known as he was as a merchant, he was far more widely known for his great benevolence, and for the generous zeal with which he always advocated and supported any movement

for the benefit of his fellow-men. He was one of the early abolitionists, and cheerfully took a large share of the obloquy and persecution which was visited upon that despised class in its darkest days. When Garrison was imprisoned in Baltimore for an article in his paper upon the domestic slave trade, Mr. Tappan paid the fine and released him from jail, and his name, from that time forward, was as notorious and almost as much hated at the South as that of Garrison himself.

It was after he removed to New York that he first made a public profession of religion, uniting with the church in Murray Street, then under the care of the eminent Dr. John M. Mason. As success in business became assured, he began to practise liberality upon a scale much more elevated than had been common even among Christian merchants. He established the “Journal of Commerce” at a very large expense, in order to have a paper in the city that was independent of the support of the theatres. He was one of the chief founders of the American Tract Society, New York, and the largest donor to the first building of the Society. It was his motion in the Board of Managers, accompanied by an offer of \$10,000 for the object, that led the American Bible Society to undertake the grand work of giving a Bible to every family in the United States that would receive it. It was his endowment that set up the Lane Seminary at Cincinnati, and prevailed on Dr. Beecher to leave his church in Boston for a post of labor and sacrifice in the West. And when the trustees, in the absence of Dr. Beecher, suppressed the freedom of speech there, his donation erected Tappan Hall at Oberlin as a refuge for the exiled students of Lane. These are but a part of his public gifts. His private charities, for the relief of every sort of wants, were incessant and innumerable. Nor did he ever allow the calls of business or the gifts of money to be a substitute for personal kind offices in visiting the poor, the sick, and the afflicted, in which few men were so exemplary.

In the spring of the year 1833, feeling the necessity of having an Antislavery paper in New York in aid of the “Liberator,” which he also liberally supported, he established the “Emancipator” at his sole expense, paying the salary of the editor and all expenses. As the interest rapidly deepened, he invited a few gentlemen to meet at his lodgings, to confer together on what ought to be done for the abolition of slavery by the efforts of Christian wisdom and benevolence. These meetings were continued weekly for several months, until at length a public meeting was called for the 2d of October, 1833, at Clinton Hall, to form the New York City Antislavery Society. The meeting was prevented by a huge mob, insti-

gated by the daily papers; but a few persons met in another place, and the Society was duly formed, and at once put in vigorous operation—a large part of its resources coming from Mr. Tappan, who was chosen President. A National Convention was soon called at Philadelphia, on motion of Evan Lewis of that city, and the American Antislavery Society was formed on the 4th of December, 1833, Mr. Tappan being President, with the same persons associated as the Executive Committee. To this Society his contributions for several years were a thousand dollars per month.

In 1840 he felt constrained to leave the Society, under the belief that those who had taken the control intended to use it in hostility to the civil and religious institutions of the country, to dissolve the Union, break up the churches, and undermine the chief societies of Christian benevolence. From that time he took a less conspicuous place before the public, though always true to his principles, and ever doing what he could for their advancement. Mr. Tappan was a man of rare integrity and fidelity to principle.

TELEGRAPH, ELECTRIC. Another attempt was made in 1865 to lay a telegraphic wire across the Atlantic Ocean, connecting Valentia Bay, Ireland, and the American coast at Heart's Content, Newfoundland. The estimated expense of making and laying the cable was three millions of dollars. One-half this amount had been subscribed to the stock of the company, and in addition the Government of the United States had engaged to give a maximum subsidy of seventy-five thousand dollars a year, and the English Government one hundred thousand dollars a year, so long as the cable continued to work, each sum to go in payment of the messages sent by the respective Governments. The two Governments also give a joint guaranty of eight per cent. on the capital expended while the line works. The cable as manufactured was twenty-six hundred miles in length, and one and one-eighth inches in diameter. The weight of the mass was estimated to be over five thousand tons. The "core" or conductor was made of seven fine copper wires twisted into a single strand and insulated by a peculiar compound. Around this "core" were four layers of gutta percha, insulated with the same compound, and in turn enclosed by eleven strong iron wires, each one of which is carefully wound with Manila thread and saturated with tar, thus at once protecting the gutta percha, and adding strength to the cable. This cable was taken on board of the steamer Great Eastern and stowed in the immense iron tanks built on the lower deck. The tanks were then filled with water. The machinery for the delivery of the cable was similar to that used on a previous occasion, but improved, like all the other appliances required. The connection with the shore end was made, and the work of laying the cable commenced on July 21st. It continued, with occasional in-

terruptions of the communication with the shore, for eleven days. At this time an advance of 1,062 miles had been made, and 1,186 miles of the cable paid out, when a serious fault occurred. In the efforts to discover and remove this defect, the cable parted, and the land end went overboard. All was now evidently lost, unless it could be recovered by grapnels. The steamer then moved some thirteen or fourteen miles back from the spot where the accident occurred, and there lay to. The grapnels weighed three hundred pounds each, and consisted of two five-armed anchors, with flukes sharply curved, and tapering to an oblique tooth-like end. They were thrown overboard at 8.20 P. M., attached to a wire buoy rope five miles in length. At first the iron sank slowly, but soon the momentum of descent increased, so as to lay great stress on the machinery. Length flew after length over cog-wheel and drum, till the iron, warming with work, heated at last so as to convert the water thrown upon the machinery into clouds of steam.

The time passed heavily indeed! All life had died out in the vessel, and no noise was heard except the dull grating of the wire cable over the wheels at the bows. One thousand fathoms, fifteen hundred fathoms, two thousand fathoms, hundreds again mounting up, till at last, at 5.6 P. M., the strain was diminished, and at two thousand five hundred fathoms, or fifteen thousand feet, the grapnel reached the bed of the Atlantic, and set to its task of finding and holding the cable. Throughout the night the Great Eastern drove over the Atlantic, dragging in her course the grapnels and two miles and a half length of line, with which she was fishing for the cable. At 6.40 A. M., the picking-up machine, reinforced by the capstan, was set to work to haul up the line, which bore a strain of ten tons. At first it came up easily, and the dynamometer showed only a strain of eighteen hundred pounds, but the resistance of the rope rapidly increased till it reached a point indicated by seventy hundred pounds. At 7.15 A. M., one hundred fathoms had been recovered. At 7.25, two hundred fathoms, the strain increasing to seventy-five hundred pounds. At 8 A. M., three hundred fathoms were in, and it became evident to all on board that the grapnel was holding on and lifting "something" from the bottom. And what could that something be but the cable? The scientific men calculated the strain, and determined it could not be from the wire rope and grapnel solely, and it could only be inferred then that, as the bottom of the Atlantic is free from rocks there, and as the depth at which the rope began to resist agreed with the supposed soundings, it had really grappled the prize. At 8.9, the spur wheel of the picking-up apparatus broke, and the operation of taking in the rope became dangerous as well as difficult. The weather, which had been very thick and hazy, now settled down into a dense fog; but the conviction that the cable was surely once more attached to the

Great Eastern, no matter how precariously, and no matter how far off, afforded too much matter for congratulation, conjecture, and suspense, to allow much room for other thoughts. At 8.20 p. m., when nine hundred fathoms had been recovered, the rope parted at one of the swivels, and the work was ended. Four other attempts were subsequently made with the grapnels, and twice it was supposed that the cable had been grappled, but the rope parted when about five hundred fathoms had been recovered, and the enterprise was abandoned until the ensuing year.

TENNESSEE. The proceedings of the Convention having been ratified on the 22d of February, as related in the preceding volume of this work, the election which had been ordered to be held in the event of such ratification, on the 4th of March, for Governor and members of the Legislature, also took place. W. G. Brownlow, the nominee of the Convention, was chosen Governor. The Legislature met at Nashville on the 3d of April, and on the 5th ratified the United States constitutional amendment. It also reorganized the State Government, and elected David T. Patterson and Joseph S. Fowler Senators to Congress. The most important law passed was the one regulating the elective franchise, of which the following is an extract:

Be it enacted by the General Assembly of the State of Tennessee, That the following persons, to wit: 1st. Every white man twenty-one years of age, a citizen of the United States, and a citizen of the county wherein he may offer his vote, six months next preceding the day of election, and publicly known to have entertained unconditional Union sentiments, from the outbreak of the rebellion until the present time; and 2d. Every white man, a citizen of the United States, and a citizen of the county wherein he may offer his vote, six months next preceding the day of election, having arrived at the age of twenty-one years, since March 4, 1865, provided that he has not been engaged in armed rebellion against the authority of the United States, voluntarily; and 3d. Every white man of lawful age, coming from another State, and being a citizen of the United States, on proof of loyalty to the United States, and being a citizen of the county wherein he may offer his vote six months next preceding the day of election; and 4th. Every white man a citizen of this State, and a citizen of the United States, who has served as a soldier in the army of the United States, and has been or hereafter may be honorably discharged therefrom; and 5th. Every white man, of lawful age, and a citizen of the United States, and a citizen of the county wherein he may offer his vote six months next preceding the day of election, who was conscripted by force into the so-called Confederate army, and was known to be a Union man on proof of loyalty to the United States, established by the testimony of two voters under the previous clauses of this section; and 6th. Every white man who voted in this State at the Presidential election in November, 1864, or voted on the 22d of February, 1865, or voted on the 4th of March, 1865, in this State, and all others who had taken the "oath of allegiance" to the United States, and may be known by the judges of the elections to have been true friends to the Government of the United States, and would have voted in said previously mentioned elections, if the same had been holden within their reach, shall be entitled to the privileges of the elective franchise.

Be it further enacted, That all persons who are or shall have been civil or diplomatic officers or agents of the so-called Confederate States, or who have left judicial stations under the United States, or the State of Tennessee, to aid in any way in the existing or recent rebellion against the authority of the United States, or who are or shall have been military or naval officers of the so-called Confederate States above the rank of captain in the army, or lieutenant in the navy, or who have left seats in the United States Congress, or seats in the Legislature of the State of Tennessee to aid said rebellion, or have resigned commissions in the army or navy of the United States and afterwards have voluntarily given aid to said rebellion, or persons who have engaged in any way in treating otherwise than lawfully prisoners of war persons found in the United States service as officers, soldiers, seamen, or in any other capacities, or persons who have been or are absentees from the United States for the purpose of aiding the rebellion, or persons who held pretended offices under the government of States in insurrection against the United States, or persons who left their homes within the jurisdiction and protection of the United States, or fled before the approach of the national forces, and passed beyond the Federal military lines into the so-called Confederate States for the purpose of aiding the rebellion, shall be denied and refused the privilege of the elective franchise in this State for the term of fifteen years from and after the passage of this act.

Be it further enacted, That all other persons except those mentioned in Section I. of this act are hereby and hereafter excluded and denied the exercise of the privilege of the elective franchise in this State for the term of five years from the passage of this act.

And be it further enacted, That any voter may be challenged by an admitted voter of Section I. of this act, on offering his vote, and thereupon the judges of elections shall peremptorily, to the person so challenged, before permitting him to vote, administer the following oath; said oath to be taken by all judges of elections and candidates for office:

"I solemnly swear that I will henceforth support the Constitution of the United States, and defend it against the assaults of all its enemies; that I am an active friend of the Government of the United States; that I will heartily aid and assist the loyal people in whatever measure may be adopted under the Constitution of the United States, and under all laws and proclamations made in pursuance thereof, to establish the national authority over all the people of every State and Territory embraced in the national Union; and that I will faithfully and most heartily support and defend the Constitution of the State of Tennessee, and the amendments and schedule thereunto appended and adopted by the people on the 22d day of February, 1865, and also all acts of the General Assembly assembled in accordance therewith; and that I take this oath freely, voluntarily, and without any mental reservation. So help me God."

And be it further enacted, That any person taking this oath falsely shall be guilty of perjury, and shall suffer all the pains and penalties attached to that crime.

A petition was presented from the "colored citizens of Tennessee," asking for the elective franchise, in which they said:

We know the burdens of citizenship, and are ready to bear them. We know the duties of the good citizen, and are ready to perform them cheerfully. Therefore, we humbly and respectfully petition your honorable body to place us in a position in which we can discharge those duties more effectually, namely: We ask the legal right to use the elective franchise, and to testify upon oath to the truth in

the several courts of our State. We do not ask for the privileges, wishing to shun the obligations imposed upon us by them.

Beyond ordering five hundred copies of the petition to be printed, a motion for which was carried by a vote of 41 to 10, no definite action was taken in the matter.

An act was passed on the 9th of June, apportioning the representation of the State in the United States Congress. On the 12th the Governor issued a proclamation, ordering the election of a full delegation of members of Congress in the eight districts of the State, and for members of the Legislature where there were vacancies, to be held on the 3d of August, and enjoining on the sheriffs and judges of elections a strict enforcement of the provisions and restrictions of the franchise act, which made it the duty of the county court clerk in each county to open and keep a registration of voters, and to furnish certificates of registration, without presenting which to the judges at the polls no person was entitled to vote. The restrictions of the franchise law were such as to exclude a large number of citizens from the right of suffrage. It was claimed to be unconstitutional, and met with much opposition, especially in Middle and Western Tennessee. Mr. William Sale, a citizen of Memphis, who had never participated in the war, called on the county clerk and requested that his name might be registered; and on this being refused, on the ground that he would not undertake to prove that he had been "publicly known to have entertained loyal sentiments from the outbreak of the rebellion in 1861," he filed a petition before the Hon. William M. Smith, Judge of the Common Law and Chancery Court of Memphis, praying for a mandamus to compel the county clerk to issue the required certificate. The cause was tried on the 28th of June, and Judge Smith on the morning of the 29th rendered a decision sustaining the franchise law as valid and constitutional, refusing the mandamus and dismissing the petition. On the 14th of July Governor Brownlow published an "address," in which, after arguing in favor of the constitutionality of the law, he continued:

Having said this much by way of friendly explanation, I come to the principal object of this address, and that is, that this important law is already set at naught in many local cities by the remissness of those whose official duty it is to execute it, to announce that it will be enforced on the day of election as far as the civil and military authorities can enforce it; and all elections effected by illegal votes will be annulled, and if necessary the officers elected will be arrested. The civil and military authorities understand each other, and will act in harmony. The commander of the Military Division of Tennessee will aid the civil authorities in all instances when the powers of the latter are inadequate to protect the ballot-box from fraudulent voting, or remove county officers in behalf of the State, no matter by whom elected. This step, so likely to become necessary, is much to be regretted, and clerks and judges of election yet have time to correct much they have done; and the hope is expressed that many of them will do so and save their respect.

It was to this address that President Johnson alluded in the following despatch:

WASHINGTON, Thursday, July 20, 1863.

Hon. W. G. Brownlow:

I hope and have no doubt you will see that the recent amendments to the Constitution of the State as adopted by the people, and all the laws passed by the last Legislature in pursuance thereof, are fairly executed, and that all illegal votes in the approaching election be excluded from the polls, and the election for members of Congress be legally and fairly conducted. When and wherever it becomes necessary to employ force for the execution of the laws and the protection of the ballot-box from violence and fraud, you are authorized to call upon Maj.-Gen. Thomas for sufficient military force to sustain the civil authorities of the State. I have received your recent address to the people, and think it well-timed, and hope it will do much good in reconciling the opposition to the amendment to the Constitution and the laws passed by the last Legislature. The law must be executed and the civil authority sustained. In your efforts to do this, if necessary, Gen. Thomas will afford a sufficient military force. You are at liberty to make what use you think proper of this despatch.

ANDREW JOHNSON,
President of the United States.

On the 18th the Governor issued another proclamation, declaring the act to limit the elective franchise the supreme law of the land; denouncing as rebels all who should unite for the purpose of defeating its execution; declaring that no person would be permitted to be a candidate until he had taken and subscribed the required oath; calling upon the civil authorities throughout the State "to arrest and bring to justice all persons who, under pretence of being candidates for Congress or other office, are travelling over the State denouncing and nullifying the Constitution and laws of the land, and spreading sedition and a spirit of rebellion;" and, finally, commanding all clerks of county courts and judges of elections faithfully to perform the duties imposed on them under penalty of being held to a strict account. Notwithstanding all the Governor's precautions, considerable irregularities crept into the modes of registration, and after the election he issued a proclamation calling upon the county clerks and sheriffs for information as to the manner in which the certificates were granted and the oaths administered. The results of this inquiry he embodied in a message to the Legislature, which assembled in October. The certificates, he said, seemed to have been granted in five different ways, as follows:

1. When the applicant was known to the clerk to be of publicly known Union sentiments.
2. Upon proof by witness that the applicant came within the provisions of the "act to limit the elective franchise."
3. Upon the oath of the applicant alone, that he came within some provision of the law.
4. The production of an oath of allegiance or amnesty, taken at some time by the applicant.
5. Where the applicant was certified or vouched for by some official, either civil or military.

The third, fourth, and fifth of these modes he decided to be illegal, and threw out the vote of twenty-nine counties. The entire vote of the State was 61,783; when the votes illegally

registered were thrown out, it was reduced to 39,509.

The Legislature met again in October. The following bill to render persons of African and Indian descent witnesses in the courts of the State, was carried in the Senate by a vote of ten to nine, but failed to pass the House of Representatives:

Be it enacted by the General Assembly of the State of Tennessee, That persons of African or Indian descent are hereby declared to be competent witnesses in all the courts of this State, in as full a manner as such persons are, by an act of Congress, competent witnesses in all the courts of the United States; and all laws and parts of laws of this State, excluding such persons from competency, are hereby repealed.

Resolutions endorsing the administration of President Johnson were tabled by a vote of thirty-five to twenty-five in the House of Representatives, and the following was adopted in their place, by a vote of sixty to four:

Resolved, That we endorse the administration of his Excellency the President of the United States, and especially his declaration that treason shall be made odious, and traitors punished.

In his message to the Legislature of April 6th, Governor Brownlow, speaking on the financial condition of the State, said:

The State debt, as reported by the comptroller in October, 1861, is said to be \$6,896,606.66, and this demands your attention. This includes \$3,000,000 of eight per cent. bonds for the "defence of the State," which has recently been discarded by the people at the ballot-box. This unauthorized and most unjust indebtedness repudiated, leaves the indebtedness of the State properly \$3,894,606.66, at an annual interest of \$212,388.25. The interest is presumed to have been paid on the 1st of January, 1861. It is not known how much has been paid, if any. The bonds will show either by the endorsement or the absence of the coupons. Besides this debt, the State has bonds for internal improvement purposes, and has endorsed the bonds of railroad companies to the amount of \$16,211,000. For these the State is ultimately liable upon the failure of the companies. These bonds, it is believed, the State will have to provide for, to preserve its credit, making an aggregate indebtedness of \$20,005,606.66, and the annual interest \$1,185,048.25. Of this debt proper, \$66,666.66 matured in 1861; \$61,250 in 1862; \$177,750 in 1863; and \$58,500 in 1864; in all, \$366,166.66 at once to be provided for. The comptroller states that the bonds maturing in 1861 were "taken possession of and held by the State, subject to adjustment at the end of the war." Besides these, the State held bonds, mostly her own, as follows: The Spencer T. Hunt Fund, 6; the Railroad Sinking Fund, 161; deposited by free banks, 841; deposited by foreign insurance companies, 80; and in all 588 bonds. These bonds, held in trust, were carried away, it is believed, with the valuables of the State treasury, by the State officers who ingloriously fled on the approach of the national flag. Double payment can probably be avoided. Evidence must be in existence by which they can be identified. The notorious condition of our State affairs has been sufficient to put dealers upon their guard; so that if any of the bonds have been fraudulently sold, payment to the present holders may be justly stopped.

The debt due and to be provided for at once, according to the report of the Comptroller to the Legislature at its session in October, was \$1,218,719.66.

The educational and charitable institutions suffered much during the war. The common-school fund was appropriated by the Confederate authorities. The Governor, in his October message, advised that this fund should, as far as possible, be replaced out of the proceeds of what was left of the State Bank. "This large fund," he said, "emanated mainly from the General Government, and was held by the State in sacred trust. The declaration of this trust may be found in the act of Congress which created it, and is 'for the instruction of children forever.' And by the Constitution it is declared to be a 'permanent fund,' 'never to be diminished by legislative appropriation,' nor the interest 'devoted to any other use than the support and encouragement of common schools.'" He adds, "Let the State keep her faith with the destitute and long-neglected school children, no matter who else may suffer, and then settle with other creditors as best she may."

The Tennessee Blind School, a State institution near Nashville, was entirely destroyed by the Federal forces. The pupils, some forty in number, were distributed among their friends or became dependent on private charity. The library, furniture, and fixtures of the East Tennessee University, chartered and endowed by the State in 1807, were totally destroyed by the same agency. The State Deaf and Dumb School at Knoxville was used for hospital purposes by the Federal army.

The whole number of prisoners in the State penitentiary on the 80th of September, was 182, of whom 108 were committed by the civil and 79 by the military authorities.

A State colored convention was held at Nashville, on the 7th and 8th of August. The following preambles and resolutions were adopted by a vote of more than two to one:

Whereas, We, in convention assembled, in order to deliberate, as far as we are able, upon the present condition and future prospects of the colored people of Tennessee; and whereas, it is expedient in all our deliberations, we will put forth to them our sentiments—

Resolved, That we will publish an address to them and cause it to be circulated throughout the State.

Whereas, The petition presented by the colored people of Tennessee to the Legislature thereof, has not been disposed of by that body, as we understand, because they do not know the sentiments of their constituents; therefore be it

Resolved, That we publish an appeal to the loyal white citizens of Tennessee upon the subject matter contained in the said petition. Inasmuch as the Federal Government has called for our assistance in putting down the late iniquitous rebellion, and acknowledged not only our humanity and right to freedom, but our just claim to all other rights under the Government; therefore be it

Resolved, That we protest against the Congressional delegation from Tennessee being received into the Congress of the United States, if the Legislature of Tennessee does not grant the petition before it prior to December 1, 1865.

Other resolutions were adopted, appointing a committee, to be composed of delegates from each county, to investigate the condition of the

freedmen, and report to the Bureau at Nashville. Addresses were also agreed upon, to the colored people and white citizens of the State.

The following, in relation to the habits of the freedmen, is from the "Knoxville Whig" of September 27th

Thousands of free colored persons are congregating in and around the large towns in Tennessee, and thousands are coming in from other States, one-third of whom cannot get employment. Indeed, less than one-third of them want employment, or feel willing to stoop to work. They entertain the erroneous idea that the Government is bound to supply all their wants, and even to furnish them with houses, if, in order to do that, the white occupants must be turned out. There is a large demand for labor in every section of the State, but the colored people, with here and there a noble exception, scorn the idea of work. They fiddle and dance at night, and lie around the stores and street corners in the daytime.

Gov. Brownlow, in his October message, avowing himself deeply impressed with the apprehension of future troubles, growing out of the antagonism of the races, advocated the removal of the negro population to a separate territory in a climate adapted to their nature, and there settling them as a nation of freedmen. With regard to the question of granting them the elective franchise within the State, he said :

I think it would be bad policy, as well as wrong in principle, to open the ballot-box to the uninformed and exceedingly stupid slaves of the Southern cotton, rice, and sugar fields. If allowed to vote, the great majority of them would be influenced by leading secessionists to vote against the Government, as they would be largely under the influence of this class of men for years to come, having to reside on and cultivate their lands. When the people of Tennessee become satisfied that the negro is worthy of suffrage, they will extend it, and not before; and I repeat that this question must be regulated by the State authorities, and by the loyal voters of the State, not by the General Government.

He advocated the admission of freedmen to testify in the courts, urging that much of the repugnance to negro testimony was the result of education and habit. "It is required of the white witness," said the Governor, "that he shall be disinterested, and shall have sufficient intelligence to 'understand the obligation of an oath.' Let the same be required of the negro. He is now subject to the same penalties for perjury that the white man is; and as he is religiously inclined, he will no doubt take the proper views of the penalty in the world to come. Again, it must be remembered that our juries are the exclusive judges of the weight of evidence, and that they will not fail to take into consideration the degree of intelligence, and the character for honor and veracity of the witnesses, whether white or black."

It appears from the books of the Government undertaker at Nashville, that since the Federal occupation, 12,284 Federal soldiers and Government employes, who had died from wounds and disease, were buried there, besides about 8,000 Confederate soldiers and 10,000 refugees and contrabands. The cost to the Government was five dollars for every soldier buried, the name of each and the number of his regiment

being plainly marked on a substantial board at the head of his grave. During the same time the bodies of about 5,000 officers and soldiers were sent home, secured in metallic cases.

TERRITORIES OF THE UNITED STATES.

The public domain of the United States lying west of the Mississippi River is comprehended within nine territorial governments, viz.: Arizona, Colorado, Dakota, Idaho, Montana, Nebraska, New Mexico, Utah, and Washington, to which may be added the district set apart for the Indian tribes removed from the old States of the Union, known as the Indian Territory. A bill was introduced into the Thirty-eighth Congress to form a new Territory, to be called Wyoming, out of the southwest part of Dakota, but failed to become a law. In anticipation of the admission of Colorado into the Union before the publication of this work, that Territory has been described under its special head.

Arizona.—The general lines of this Territory are thus defined in the organic act, approved February 24, 1863: "All that portion of the present Territory of New Mexico situated west of a line running due south from the point where the southwest corner of the Territory of Colorado joins the northern boundary of the Territory of New Mexico." This region embraces an area of 120,912 square miles, or 77,388,680 acres, which is three times as large as the State of New York. While it has some barren and desolate country, no mineral region belonging to the United States, not excepting California, has, in proportion to its extent, more arable, pastoral, and timber lands. The climate is described as singularly adapted to physical health or to agricultural and mining pursuits. The valleys of the Gila and Santa Cruz, the San Pedro, and other streams, are large, and equal in fertility to any agricultural district in the United States. The San Pedro Valley, over one hundred miles in length, is, perhaps, the best farming district south of the Gila River. The Sonoita Valley, which opens into the Santa Cruz near Calabazas, is some fifty miles long. Prescott, the Territorial capital, is the heart of a mining district of remarkable productiveness. The first house was erected in June, 1863, and now the town has some hundreds of inhabitants, and the country for fifty miles about, including a dozen mining districts and farming valleys, is largely taken up by settlers. The valleys will, it is thought, produce good crops without irrigation, as the rains in this region are frequent and heavy. Of the mining interests in the vicinity of Prescott, the Hon. Richard O. McCormick, Secretary of the Territory, speaks as follows:

The surface ores of thirty mines of gold, silver, and copper which I had assayed in San Francisco, were pronounced equal to any surface ores ever tested by the metallurgists, who are among the most skilful and experienced in the city, and, so far as ore has been had from a depth, it fully sustains its reputation. The veins are large and boldly defined, and the ores are of varied classes, usually such as to be readily and inexpensively worked, while the facilities

for working them are of a superior order. At the ledges is an abundant supply of wood and water; near at hand are grazing and farming lands, and roads may be opened in every direction without great cost. Some of the streams are dry at certain seasons, which fact renders placer mining an uncertain enterprise in this part as in other parts of the Territory; but for quartz mining there could not possibly be a more inviting locality. The altitude is so great that the temperature is never oppressively warm; and the nights, even in midsummer, are refreshingly cool and bracing. The ascent from the river by the roads from La Paz and Mojave is so easy, that with the small amount of work already done upon the same, the heaviest machinery may be readily transported. The distance by either road is about one hundred and sixty miles, and the charge for freight from six to eight cents per pound. Contracts may now be made for the delivery of machinery at Prescott from San Francisco, *via* the Colorado, for ten cents per pound.

Weaver and Wickenburg, upon the Hassayampa, south of Prescott, are important mining centres eastward from Prescott, upon the Agua Frio, the Verde, the Salinas, and other streams, to the New Mexican line; exploring parties have discovered evidences of great mineral wealth and excellent agricultural districts. Northward to the villages of the Moquis, and the San Juan River, the country is but little known, but believed to be prolific in the precious ores and in timber. Some of the most promising districts have never yet been prospected. In the opinion of many persons, the richest mines lie in the unexplored eastern part of the Territory. For a year after the organization of its government, the Territory was without a mail or post-office. Now a weekly mail is established from Los Angeles to Prescott, and eastward to Santa Fé, *via* the 35th parallel, where it connects with that for the Missouri River. Other routes have been proposed, and a company is organized to furnish telegraphic communication between Los Angeles and Prescott, and so put the Territory in immediate communication both with the Pacific and Atlantic coast.

Being primarily a quartz mining country, Arizona has not increased so rapidly as other Western Territories, to which the quick returns from surface mining have attracted a large but often fluctuating population. With the aid of machinery and capital, and ready communications with more settled regions, a steady increase in population may be expected. The present number of inhabitants is between 15,000 and 20,000, exclusive of Indians. The latter have proved a serious hindrance to the growth and prosperity of the Territory; but in consequence of the superior ability of the United States Government to strengthen the military posts there, a considerable abatement of this nuisance may be expected. Arizona is at present divided into four counties, each named from a prominent Indian tribe residing within its borders: Mojave, Pima, Yavapai, and Yuma. The Territorial government is the same as in 1864. An election was held in September for delegates to Congress, at which 1,343 votes were cast, resulting in the choice of John N. Goodwin, a

supporter of the administration. The Territorial Legislature consists of seven members, four for Yavapai, and one for each of the other three counties.

Dakota.—The absence of any special attractions in the form of rich deposits of the precious metals, has caused the progress of this Territory in population or agricultural development to be less marked than that of some others. The chief sources of wealth continue to be the various kinds of furs yielded by its forests and plains, and which find a ready market in the Eastern States. A very serious obstacle to immigration has been the hostility of the Sioux and other Indian tribes living within the Territory, who, in spite of the efforts of the Government, backed by a large military force, maintained during the year a predatory warfare along the great routes of travel connecting the valley of the Mississippi with the Pacific coast. Many stations of the overland mail routes were plundered and burned; small, isolated bands of emigrants were cut off and murdered; and travel across the Rocky Mountains was rendered unsafe unless by large bands, having a military escort. During the spring and summer the Government largely increased its forces west of the Missouri River, a portion being composed of men lately in the Confederate military service; and the vigorous measures adopted by Generals Connor and Sully, soon induced the Indians to sue for peace. On the recommendation of these officers, a commission, composed of officers of the army and civilians, was sent to the Upper Arkansas and the Upper Missouri, and satisfactory treaties were made with such of the tribes as could be reached before the close of the season. The Territorial officers of Dakota are the same as in 1864. An election for members of the Legislature was held in the Territory on October 6th, at which the Republicans were successful.

Idaho.—The almost incalculable richness of the mineral deposits of this Territory has attracted thither a large population, although for how long a time it is destined to receive so rapid an influx cannot now be determined. The present number of inhabitants is considerably over twenty thousand. The capital was in 1865, by act of the Legislature, removed from Lewiston to Boise City, a substantial town of about one thousand two hundred inhabitants, in the southwestern part of the Territory. It is the depot for all the mining region so far discovered in Southern Idaho, although there are no mines within twenty-five miles of the town. The principal town of the Territory is Idaho City, thirty-five miles north of Boise City, situated in the heart of a rich "placer" district, and containing from five thousand to seven thousand inhabitants on week days, and double that number on Sundays, when the miners for miles around assemble there for business or pleasure. In the latter part of May, 1865, the town was nearly destroyed by fire, the loss of property being estimated at \$1,500,000; but

within two or three months the burnt district was entirely rebuilt in a more substantial style than before.

There are at present no means of ascertaining accurately the product of the Idaho gold mines. The known amount deposited for coinage in the San Francisco mint for the year ending December, 1864, was reported at \$3,500,000, and the total yield of the year was estimated at \$6,000,000. In his last annual message Governor Lyon stated, that in 1865 over \$17,000,000 worth of gold and silver had been produced in the Territory, and that the yield was increasing. The following extract from his message exhibits the mineral resources of Idaho:

A bird's-eye view of the accumulating discoveries in our mineral resources reveals that we have no less than three thousand gold and silver bearing quartz ledges, graded in their value as in their richness, and new discoveries and new locations are being made almost daily. The width of these lodes, or leads, varies from three to thirty feet, and they prospect from \$20 to \$200 per ton. Located usually where water power and timber are in abundance, they offer the highest inducements to the enterprising capitalists, whose investment can rarely fail of being of the most remunerative character. Among the other useful ores which have been discovered within the past year, tin, cinnabar, copper, lead, and iron in many forms, are of the first value; yet platina, antimony, nickel, bismuth, iridium, and rhodium, simple or compounded with other minerals, are found in various localities. But this is not all: beds of the best of coal, both anthracite and bituminous, with rock salt, sulphur, and gypsum (better known as the fertilizing plaster of commerce), while the most precious of gems—the diamond—has been discovered in our gulches; all give you a feeling foretaste of the illimitable extent of Idaho's varied mineral wealth when the hand of man shall have unbosomed her hidden treasures. The wide extent of our auriferous placers, only a moiety of which have been well prospected, choquered as they are by auriferous quartz lodes and leads, are rivalled only by argentiferous mountain ledges, striated, laminated, and foliated with silver in chlorides and sulphurets—arsenical, antimonial, and virgin. This presents a fabulous array of marvellous deposits, which will require the industry of ages to develop and exhaust.

Indian Territory.—Soon after the termination of the late civil war, the Choctaws and other tribes in this Territory who had sided with the Confederates, sought to make terms with the United States Government, expressing an earnest desire to return to their homes and resume their former occupations. Although by taking up arms they had forfeited the privileges they had previously enjoyed from the Government, it was determined to act with clemency toward them, in the hope that they might thereby be deterred from future aggressions. Accordingly a commission, comprising Judge Cooley, Commissioner of Indian Affairs; Col. Welles, Superintendent of the Southwestern Indians; Thomas Wistar, of Philadelphia; Gen. Parker, of Gen. Grant's staff; Gens. Heron and Harney, met in council at Fort Smith, Ark., in September, the representatives of the chief tribes residing in the Territory, and made the following treaty with the Cherokees, Creeks,

Choctaws, Chickasaws, Osages, Seminoles, Senecas, Shawnees, and Quapaws:

Whereas, the aforesaid nations and tribes, or bands of Indians, or portions thereof, were induced by the machinations of the emissaries of the so-called Confederate States, to throw off their allegiance to the Government of the United States, and to enter into treaty stipulations with said so-called Confederate States, whereby they have made themselves liable to a forfeiture of all rights of every kind, character, and description, which had been promised and guaranteed to them by the United States; and *whereas* the Government of the United States has maintained its supremacy and authority within its limits; and *whereas* it is the desire of the Government to act with magnanimity with all parties deserving its clemency, and to reestablish order and legitimate authority among the Indian tribes; and *whereas* the undersigned representatives or parties connected with said nations and tribes of Indians have become satisfied that it is for the general good of the people to reunite with and be restored to the relations which formerly existed between them and the United States, and as indicative of our personal feelings in the premises, and of our several nations and tribes, so far as we are authorized and empowered to speak for them; and *whereas* questions have arisen as to the status of the nations, tribes, and bands that have made treaties with the enemies of the United States, which are now being discussed, and our relations settled by treaty with the United States Commissioners, now at Fort Smith for that purpose:

The undersigned do hereby acknowledge themselves to be under the protection of the United States of America, and covenant and agree that hereafter they will in all things recognize the Government of the United States as exercising executive jurisdiction over them, and will not enter into any allegiance or conventional agreement with any State, nation, power, or sovereignty whatsoever; that any treaty or alliance for the cession of lands, or any act heretofore done by them or any of their people, by which they renounced their allegiance to the United States, is hereby revoked and repudiated.

In consideration of the foregoing stipulations made by members of the respective nations and tribes of Indians, the United States, through its commissioners, promises that it will reestablish peace and friendship with all nations and tribes of Indians within the so-called Indian Territory; that it will afford ample protection for security of persons and property of the respective nations or tribes, and declares its willingness to enter into treaties to arrange and settle all questions relating to and growing out of former treaties of such nations with the so-called Confederate States, at this council now convened for that purpose, or at such time in future as may be appointed.

After the treaty had been signed, further delegations of Confederate Indians, Comanches, Seminoles, Creeks, Washitas, Potawatamies, Cherokees, and others, arrived at the fort, and joined in the negotiations, urging that their lands, annuities, and other possessions ought not to be forfeited. On the 21st a treaty was signed by the commissioners and the Choctaws and Chickasaws, providing for peace and friendship between the United States and said tribes; that they will exert all their influence in compelling the Indians of the Plains to maintain peaceful relations with each other, with the Indians of the Territory, and with the United States; that slavery shall be abolished forever; that the freedmen shall be suitably provided for; that lands shall be issued to the Indians of Kansas and elsewhere; that the right of way shall be

granted to railroads; and that the consolidation of Indian tribes, with a Territorial form of government, shall be recommended by them to their respective councils.

Montana.—Like Idaho, this Territory presents great inducements to emigrants, and her population, estimated at considerably over 80,000, is composed, in a great measure, of the men who built up Colorado so rapidly, and who, upon the exhaustion of the surface deposits, left that Territory for the richer diggings just discovered in the north. When her placers become exhausted, of which there seems no immediate probability, Montana must undoubtedly expect a temporary diminution of her population; but in the development of her gold-bearing quartz veins, of which the number is almost incalculable, she will have the elements of a steady and permanent increase. The population at present centres around the mining towns of Virginia City, 10,000 inhabitants, Helena City 8,000, and Diamond City 4,000.

One of the most surprising geographical facts about Montana is, that it is reached by steamboat from St. Louis. Travellers and freight are now transported by steamboat, and without transshipment, from St. Louis to Fort Benton, in the heart of Montana; and freight, in the proper season of navigation, may be got to Montana quicker than to Denver City. This cheap mode of communication will be of vast importance to the new Territory, and light-draught boats are now building at Louisville especially for the Montana trade. These will supersede the boats now used, which are sometimes delayed on the upper waters. The river voyage from St. Louis to Fort Benton is now made in twenty-eight days, and freight is carried at the price of ten cents per pound.

Among recent discoveries in the Territory was that of a rich gulch on the eastern slope of the Rocky Mountains, called the "Last Chance," near which there sprang into existence, in a few months, the populous mining town of Helena City. The gold discoveries next extended across the mountains, to the head-waters of the Blackfoot, where some important deposits have been opened. East of the Missouri River, during last summer, discoveries were made at Confederate Gulch, where Diamond City, now containing four thousand inhabitants, has since gathered. It is reported that the deposits there are of great richness. Gold lodes occur everywhere in connection with gulch diggings. One of the best gold lode-mining districts is on the Madison River, in what is called Hot Spring district.

The ores of Montana are reported by scientific men to be richer than those of California, which yield an average of twenty dollars per ton. The great majority of the lodes of Montana promise an average of more than four times the above amount. There are few sulphurets of iron and copper, carrying gold, in Montana, such as prove so troublesome in Col-

orado. This is owing to the fact that the formation is so open and perforated by water, that the sulphurets have been decomposed. For the same reason miners in Montana are not troubled with water, and are saved the heavy expenses of pumping.

The silver ores are in the form of argentiferous galena, which must be smelted as Western lead ores are, and the silver separated from the lead ores by cupellation. The silver ores are much more trustworthy than those yielding gold; and experience has already shown that silver mining will be, in Montana, more profitable than gold mining. The veins are more uniform in the yield, and last better. The large and constant supply of water is of immense benefit to mining operations in Montana, as well as the facility of movement; the country everywhere abounding in natural roads, which do not easily become broken up.

The veins of copper ores have been traced for a great extent, and the ores are found to yield from thirty-three to sixty-five per cent; but little attention is as yet given to this metal, as gold and silver monopolize the attention of the people.

Sidney Egerton is the Governor of Montana, and H. P. Torrey, Territorial Secretary. The capital is Virginia City. An election for delegate to Congress was held in September, which resulted in the choice of Samuel McLean, the Democratic candidate, by a majority of about a thousand.

Nebraska.—Unlike the Territories lying along the slopes of the Rocky Mountains, Nebraska has few or no deposits of precious ores in her soil, although iron and coal are believed to exist in great abundance. As a grazing country it cannot be surpassed, and the soil produces in abundance all the cereals of the West. Besides being a fine agricultural and stock-raising country, Nebraska is also the great starting-point and highway for travel over the Plains, whence her lands are much sought after by emigrants. Fine lands can be taken under the homestead law, in the immediate neighborhood of good settlements, where the settler will have all the advantages of churches and schools already established. Improved farms can be purchased in tracts of one hundred and sixty acres, with from forty to eighty acres under cultivation, with small dwelling and outbuildings, for from \$2.50 to \$5 per acre. As a general rule, farms can be bought at less than the cost of the improvements, owing to the constant emigration to the adjacent gold mines of Colorado and Idaho. The Territory has adopted a liberal free-school system, which will furnish a free school in a short time the year round in every school district. At the present time the schools are free on an average about six months in the year. The population is now estimated at 50,000.

Nebraska is traversed through its entire length by the main trunk line of the Union Pacific Railroad, the completion of which is destined to develop very considerably the resour-

ces and wealth of the Territory. At the close of 1865 the first forty miles were ready for use, and reported by commissioners appointed by the President of the United States for that purpose to be in a "superior condition." By July 4, 1866, it is estimated that a hundred miles will be completed; by the commencement of 1867, the road will have advanced two hundred and fifty miles; and by the close of 1867, the Rocky Mountains will in all probability be reached.

The Legislature was in session during January and February. Resolutions endorsing the President's administration were passed almost unanimously, and bills providing for a geological survey of the State, and making liberal provisions to induce emigration, and also resolutions approving the constitutional amendment abolishing slavery, pledging the vote of Nebraska to ratify it, if needed.

An election was held in 1865 for Territorial treasurer and auditor, and a Legislature. Most of the Republican candidates were elected by large majorities.

New Mexico.—The progress of New Mexico is steady, if less rapid than that of several sister Territories, and as a stock-raising country she is destined to hold an important rank. From this region come the greater part of the mules used by overland emigrants to California, and it already possesses several hundred thousand milch cows, and two and a half million sheep. Stock-raising and agriculture are the principal occupations of the inhabitants, although gold, silver, and copper mining is prosecuted to a considerable extent. The population is about 30,000. In the latter part of 1865 Gen. Robert Mitchell was appointed to succeed Henry Connelly as Territorial Governor. The Territorial Legislature repealed the free negro law, and amended the Peon law so as to make servitude under it entirely voluntary. A convention was ordered to frame a State Constitution. The election of delegates was to take place on the first Monday in March, 1866, and the Constitution will be submitted to the people on the last Monday in the succeeding April, so that the State may apply for admission before the adjournment of the first session of the Thirty-ninth Congress.

The election for a delegate to Congress resulted in the choice of J. F. Chavez, Republican, by a large majority. Of the Legislature elected in October, about three-fourths are Republicans.

Utah.—Notwithstanding the difficulties in the path of emigration across the Plains, the population of Utah increased during 1865 about 15,000, and at the commencement of 1866 was estimated at 95,000. The new-comers were almost exclusively European converts from the Scandinavian and Celtic stocks. The political status of the Territory is an anomalous one. It now possesses three governments, each of which extends over the whole Territory, in form, if not in fact—the Territorial Government, organized by virtue of the organic act of Congress;

the government of the so-called State of Deseret, of which Brigham Young is Governor; and the government of the Church, of which Brigham Young is first president, and the supreme head. The Church confines its control not to things eternal and celestial, but extends to all the relations of life and business; to family affairs, and to the fixing of the price of commodities for sale. Nothing is beneath its care, and nothing is above its power. This Church has larger and more positive powers than were ever claimed by any other. So far as relates to power, it has, by irrevocable revelation, been placed in the hands of one man. The Territorial Government seems to have little vitality or power. None but Mormons are sent to the Legislature. If the Governor vetoes laws passed, the Legislature of the State of Deseret can pass them, and Governor Young gives them his sanction, and they are laws for the State, when they failed to be so for the Territory. The laws of the State of Deseret are not published, but kept among the secret archives. That this condition of things can last long seems impossible, and there are grave apprehensions that a collision between the Mormon organization and that of the United States is imminent. The former is at present strongest within the Territory.

The cultivation of cotton in Southern Utah has been a great success, and several factories are in constant operation making it up into various fabrics. The yarn is very even, and has an excellent appearance. In the same quarter important discoveries of silver and gold mines have been reported, but, owing to the undeveloped condition of that part of the Territory, little has been done in working them.

More than thirty years ago, Joseph Smith prophesied that within a generation the "Saints" would repossess Jackson County, Missouri, and rebuild the Temple. In November a remarkable discourse was delivered in Salt Lake City on the subject, in which the statement was made that the time was near at hand for a commencement to be made there, and this belief seems to be strongly implanted in the people. The speaker descanted largely upon the beauty and glory of the city which should be built upon the site selected for the Temple, which is about a mile west of Independence, and where the Mormons declare the Garden of Eden was located, and where the first important scenes in the world's drama were enacted.

Washington.—Of this Territory, lying in the extreme northwest corner of the national domain, little requires to be said beyond the elaborate account given in our volume for 1864. The population is estimated at 15,000. It is settled principally along the coast, and its chief productions are wheat and other cereals, and lumber, for which the Puget Sound district is excellently adapted. Its mineral resources are comparatively undeveloped. The Indian tribes are few and much scattered, and in general peaceably disposed. They are being located

on small reservations, in order more thoroughly to control them.

TEXAS. After the surrender of Gen. Kirby Smith to Gen. Canby, and before the arrival of the force under Gen. Weitzel, which sailed from Fortress Monroe about the end of May, a good deal of anarchy prevailed in Texas. The Texas troops were disbanded before the commissioners sent to Gen. Canby arrived, and carried their arms with them, and also a large amount of ammunition, and horses and wagons. In view of this fact, Gen. Granger issued an order, requiring all persons having such property in their possession, to deliver it up to the proper United States officer. There were also at Austin, and in various parts of the State, considerable quantities of military stores and other property abandoned by the Confederate authorities, exposed to plunderers, much of which was actually carried off by persons who claimed to be creditors of the State or of the Confederate Government; and Pendleton Murrah, still exercising the functions of Governor, issued a proclamation, addressed to the sheriffs of the various counties, requesting and enjoining upon the various counties of this State to collect and preserve all such public property, and hold the same subject to the order and disposition of the legally constituted authorities of the State; reporting said property accurately, as it shall be collected together, to the Executive at Austin.

Gov. Murrah also issued a call for the Legislature to meet on the 16th of July, and ordered an election to take place on the 19th of June, for delegates to a State Convention, to meet on the 10th of July, and take measures for the restoration of the State to the Union, in the hope of avoiding a military administration of affairs by agencies of the Federal Government. But before the time appointed for the election of delegates, Gen. A. J. Hamilton was appointed Provisional Governor by President Johnson. On the 21st of July he arrived at Galveston, accompanied by a number of prominent refugees, and on the 25th issued a proclamation announcing his appointment, with instructions to take the necessary steps for holding a convention, to be composed of delegates chosen by that portion of the people of the State known to be loyal, for the purpose of amending the Constitution, reorganizing the State government, and restoring the State to constitutional relations with the United States. He fixed no time for the convention, but announced that suitable persons would be appointed in the different counties to administer the oath of amnesty prescribed in the President's proclamation of the 29th of May, and to register the names of loyal voters. On the ground that there were "no civil officers in the State," and that the great body of the people were laboring under such disabilities as to preclude elections, he announced that indispensable district and county officers would be appointed. He declared to be in force only such laws as had

been enacted before the last of February, 1861, and directed officers and citizens and the courts when established, to be governed by them, except in so far as they might be affected by the emancipation of the slaves by United States authority, or by other acts of the United States for the suppression of the rebellion. The proclamation concluded as follows:

The people of the State are invited to engage in the work of reconstructing local government for themselves. I come, tendering, in the name of the United States, amnesty for the past, security and freedom for the future. Every generous heart will feel, and every candid mind admit, that the Government of the United States seeks not, and has never sought, to humiliate the people of the South. It but asks them to be friends rather than enemies.

The negroes are not only free, but I beg to assure my fellow-citizens that the Government will protect them in their freedom.

For the time being the freedmen are recommended to engage with their former masters for reasonable compensation, to labor at least till the close of the season for gathering the present crop. For them, generally, to do otherwise, would be greatly to the injury of themselves and the community at large. But let it be understood that combination among those interested in securing their labor to prevent them from hiring to persons who will pay the best price for such labor, and to ostracize in society those who oppose such combinations, will meet with no favor at the hands of the people or Government of the United States. And candor compels me to say to the people of Texas, that if, in the action of the proposed convention, the negro is characterized or treated as less than a freeman, our Senators and Representatives will seek in vain admission to the halls of Congress. It is indeed strange that men should take a solemn oath to faithfully abide by and support all laws and proclamations which have been made during the existing rebellion with reference to the emancipation of slaves, and in the next breath favor gradual emancipation. It is the part of wisdom and the part of duty to accept what is inevitable without resistance, and recognize truth however unpalatable.

Governor Hamilton's proclamation for the reorganization of the judiciary provided that the district courts should proceed with the trial of all criminal causes; that all civil suits should be proceeded with to judgment and execution, but that in no action for debt should final judgment be rendered until further orders; that the existing organization of districts, and the usual time of holding courts, should continue; that attorneys-at-law, before practising, must take the amnesty oath, those not entitled to its benefits being precluded till pardoned; that all persons of color were to be considered as on an equality with white men in respect to the punishment of crime, and when tried by virtue of indictments before presented and found guilty, the judgment of the court was to be the same as if the defendant were a white person; and that justices of the peace might render final judgment.

Judge McFarland, one of the district judges appointed by Gov. Hamilton, had the following questions brought before him in several cases:

1. As to the effect of the law known as the stay-law, passed by the Texas Legislature under the Confederate rule; and also, as to the effect of the act

passed by the same body suspending the statute of limitations.

2. As to the power of the Provisional Governor to appoint a provisional judiciary, and to organize provisional courts.

3. As to the relation in which the provisional courts, so established, stand to the former district courts of the State, organized under secession auspices.

4. As to the effect to be given by the provisional courts of the interlocutory orders and decrees of the secession district courts in suits still pending.

Upon these questions the judge ruled substantially, that the authorities having control of the State from February, 1861, to June, 1865, constituted for all practical purposes a government *de facto*; and that while as a political fabric it fell to pieces with the surrender and dispersion of the Confederate armies, and all its political legislation ceased to be of force, yet that the private and individual rights that had grown up under those acts remained unimpaired, and were still binding and valid between individuals, and would be so held until succeeding governments saw fit to alter them. He further held, in this connection, that the order of General Granger declaring illegitimate all acts of the Governor and Legislature after secession, and the subsequent proclamation of the Provisional Governor, declaring such laws inoperative and void, and putting in force the body of statute laws in existence prior to secession, did not necessarily have the effect of nullifying and rendering invalid transactions between private individuals during secession rule. He further held that the replication that the stay-law forbade the institution of suits, was a good and sufficient answer to a plea of the statute of limitations. He also held that the Provisional Governor was clothed with the power to organize a provisional judiciary; and in that connection overruled a motion in a pending suit, to set aside interlocutory orders and decrees that had been rendered in such suit during the rebellion.

On the 19th of August the Provisional Governor issued another proclamation, containing regulations with regard to administering the amnesty oath preparatory to the election of delegates to the State Convention, which was subsequently appointed to be held on the 8th of January, 1866, and to assemble on the 7th of February following. By this proclamation the chief justices of the several counties, with the clerks of the county and district courts, were to constitute boards charged with the duty of administering the amnesty oath, and registering the names of citizens entitled to vote; the board in each county to sit at least one day in every week. Only such citizens as were entitled to the benefit of the general amnesty were to be allowed to have their names placed on the register. Others were to be permitted to take the oath of amnesty, only for the purpose of enabling them to present their petitions to the President for special pardon, which when granted would entitle them to have their names placed on the register of

voters. The proclamation concluded with an invitation to citizens to go forward with alacrity and take the steps necessary to entitle them to aid in the restoration of a regular constitutional government to the State.

The Governor also authorized the organization of a special police force in the several counties to aid in the preservation of order.

In the transition state of society that followed the disappearance of the Confederate Government, and the consequent altered prospects of the negroes, of whom it was said there were twice as many in the State as in 1860, much apprehension was felt that the material interests of all classes would suffer. Some anticipated utter ruin, and were willing to dispose of their property at nominal prices. A few planters entertained the belief that their negroes would be left to them as slaves, or that at least emancipation would be gradual, but the majority of the wealthy and well informed prepared to accept the new order of things. Almost all were ready to assent to immediate emancipation, provided the able-bodied freedmen were compelled by Government to provide for the maintenance of their women and children. Great numbers of the negroes in their new and untried position, their minds filled with wild and fanciful notions in relation to the boon of freedom, and too ignorant to distinguish between liberty and license, became lazy, insolent, and totally unreliable for steady labor. Many planters were compelled to suspend operations, owing to the difficulty of inducing the negroes to work with regularity. On the 27th of June, at a meeting of the Common Council of Galveston, assembled to take into consideration the altered condition of the colored population and other matters, the mayor took occasion to express his regret that citizens were renting houses to negroes who had left their employers, thus "giving facilities for establishing various nuisances and committing depredations upon citizens." He stated that he had received many representations as to the negroes congregating for improper purposes in the houses they occupied, and the existence of many disorders, to remedy which he was powerless. On the following day several prominent citizens waited upon General Granger, and called his attention to the condition and practices of the negroes, and the provost marshal was instructed to issue the following order:

OFFICE OF PROVOST MARSHAL GENERAL, }
DISTRICT OF TEXAS,
GALVESTON, TEXAS, June 28, 1865.

All persons formerly slaves are earnestly enjoined to remain with their former masters under such contracts as may be made for the present time. Their own interests as well as that of their former masters, or other parties requiring their services, render such a course necessary, and of vital importance, until permanent arrangements are made under the auspices of the Freedmen's Bureau.

It must be borne in mind, in this connection, that cruel treatment or improper use of the authority given to employers will not be permitted; while both parties to the contract made will be equally bound to its fulfilment upon their part.

on small reservations, in order more thoroughly to control them.

TEXAS. After the surrender of Gen. Kirby Smith to Gen. Canby, and before the arrival of the force under Gen. Weitzel, which sailed from Fortress Monroe about the end of May, a good deal of anarchy prevailed in Texas. The Texas troops were disbanded before the commissioners sent to Gen. Canby arrived, and carried their arms with them, and also a large amount of ammunition, and horses and wagons. In view of this fact, Gen. Granger issued an order, requiring all persons having such property in their possession, to deliver it up to the proper United States officer. There were also at Austin, and in various parts of the State, considerable quantities of military stores and other property abandoned by the Confederate authorities, exposed to plunderers, much of which was actually carried off by persons who claimed to be creditors of the State or of the Confederate Government; and Pendleton Murrah, still exercising the functions of Governor, issued a proclamation, addressed to the sheriffs of the various counties, requesting and enjoining upon the various counties of this State to collect and preserve all such public property, and hold the same subject to the order and disposition of the legally constituted authorities of the State; reporting said property accurately, as it shall be collected together, to the Executive at Austin.

Gov. Murrah also issued a call for the Legislature to meet on the 16th of July, and ordered an election to take place on the 19th of June, for delegates to a State Convention, to meet on the 10th of July, and take measures for the restoration of the State to the Union, in the hope of avoiding a military administration of affairs by agencies of the Federal Government. But before the time appointed for the election of delegates, Gen. A. J. Hamilton was appointed Provisional Governor by President Johnson. On the 21st of July he arrived at Galveston, accompanied by a number of prominent refugees, and on the 25th issued a proclamation announcing his appointment, with instructions to take the necessary steps for holding a convention, to be composed of delegates chosen by that portion of the people of the State known to be loyal, for the purpose of amending the Constitution, reorganizing the State government, and restoring the State to constitutional relations with the United States. He fixed no time for the convention, but announced that suitable persons would be appointed in the different counties to administer the oath of amnesty prescribed in the President's proclamation of the 29th of May, and to register the names of loyal voters. On the ground that there were "no civil officers in the State," and that the great body of the people were laboring under such disabilities as to preclude elections, he announced that indispensable district and county officers would be appointed. He declared to be in force only such laws as had

been enacted before the last of February, 1861, and directed officers and citizens and the courts when established, to be governed by them, except in so far as they might be affected by the emancipation of the slaves by United States authority, or by other acts of the United States for the suppression of the rebellion. The proclamation concluded as follows:

The people of the State are invited to engage in the work of reconstructing local government for themselves. I come, tendering, in the name of the United States, amnesty for the past, security and freedom for the future. Every generous heart will feel, and every candid mind admit, that the Government of the United States seeks not, and has never sought, to humiliate the people of the South. It but asks them to be friends rather than enemies.

The negroes are not only free, but I beg to assure my fellow-citizens that the Government will protect them in their freedom.

For the time being the freedmen are recommended to engage with their former masters for reasonable compensation, to labor at least till the close of the season for gathering the present crop. For them, generally, to do otherwise, would be greatly to the injury of themselves and the community at large. But let it be understood that combination among those interested in securing their labor to prevent them from hiring to persons who will pay the best price for such labor, and to ostracize in society those who oppose such combinations, will meet with no favor at the hands of the people or Government of the United States. And candor compels me to say to the people of Texas, that if, in the action of the proposed convention, the negro is characterized or treated as less than a freeman, our Senators and Representatives will seek in vain admission to the halls of Congress. It is indeed strange that men should take a solemn oath to faithfully abide by and support all laws and proclamations which have been made during the existing rebellion with reference to the emancipation of slaves, and in the next breath favor gradual emancipation. It is the part of wisdom and the part of duty to accept what is inevitable without resistance, and recognize truth however unpalatable.

Governor Hamilton's proclamation for the reorganization of the judiciary provided that the district courts should proceed with the trial of all criminal causes; that all civil suits should be proceeded with to judgment and execution, but that in no action for debt should final judgment be rendered until further orders; that the existing organization of districts, and the usual time of holding courts, should continue; that attorneys-at-law, before practising, must take the amnesty oath, those not entitled to its benefits being precluded till pardoned; that all persons of color were to be considered as on an equality with white men in respect to the punishment of crime, and when tried by virtue of indictments before presented and found guilty, the judgment of the court was to be the same as if the defendant were a white person; and that justices of the peace might render final judgment.

Judge McFarland, one of the district judges appointed by Gov. Hamilton, had the following questions brought before him in several cases:

1. As to the effect of the law known as the stay-law, passed by the Texas Legislature under the Confederate rule; and also, as to the effect of the act

passed by the same body suspending the statute of limitations.

2. As to the power of the Provisional Governor to appoint a provisional judiciary, and to organize provisional courts.

3. As to the relation in which the provisional courts, so established, stand to the former district courts of the State, organized under secession auspices.

4. As to the effect to be given by the provisional courts of the interlocutory orders and decrees of the secession district courts in suits still pending.

Upon these questions the judge ruled substantially, that the authorities having control of the State from February, 1861, to June, 1865, constituted for all practical purposes a government *de facto*; and that while as a political fabric it fell to pieces with the surrender and dispersion of the Confederate armies, and all its political legislation ceased to be of force, yet that the private and individual rights that had grown up under those acts remained unimpaired, and were still binding and valid between individuals, and would be so held until succeeding governments saw fit to alter them. He further held, in this connection, that the order of General Granger declaring illegitimate all acts of the Governor and Legislature after secession, and the subsequent proclamation of the Provisional Governor, declaring such laws inoperative and void, and putting in force the body of statute laws in existence prior to secession, did not necessarily have the effect of nullifying and rendering invalid transactions between private individuals during secession rule. He further held that the replication that the stay-law forbade the institution of suits, was a good and sufficient answer to a plea of the statute of limitations. He also held that the Provisional Governor was clothed with the power to organize a provisional judiciary; and in that connection overruled a motion in a pending suit, to set aside interlocutory orders and decrees that had been rendered in such suit during the rebellion.

On the 19th of August the Provisional Governor issued another proclamation, containing regulations with regard to administering the amnesty oath preparatory to the election of delegates to the State Convention, which was subsequently appointed to be held on the 8th of January, 1866, and to assemble on the 7th of February following. By this proclamation the chief justices of the several counties, with the clerks of the county and district courts, were to constitute boards charged with the duty of administering the amnesty oath, and registering the names of citizens entitled to vote; the board in each county to sit at least one day in every week. Only such citizens as were entitled to the benefit of the general amnesty were to be allowed to have their names placed on the register. Others were to be permitted to take the oath of amnesty, only for the purpose of enabling them to present their petitions to the President for special pardon, which when granted would entitle them to have their names placed on the register of

voters. The proclamation concluded with an invitation to citizens to go forward with alacrity and take the steps necessary to entitle them to aid in the restoration of a regular constitutional government to the State.

The Governor also authorized the organization of a special police force in the several counties to aid in the preservation of order.

In the transition state of society that followed the disappearance of the Confederate Government, and the consequent altered prospects of the negroes, of whom it was said there were twice as many in the State as in 1860, much apprehension was felt that the material interests of all classes would suffer. Some anticipated utter ruin, and were willing to dispose of their property at nominal prices. A few planters entertained the belief that their negroes would be left to them as slaves, or that at least emancipation would be gradual, but the majority of the wealthy and well informed prepared to accept the new order of things. Almost all were ready to assent to immediate emancipation, provided the able-bodied freedmen were compelled by Government to provide for the maintenance of their women and children. Great numbers of the negroes in their new and untried position, their minds filled with wild and fanciful notions in relation to the boon of freedom, and too ignorant to distinguish between liberty and license, became lazy, insolent, and totally unreliable for steady labor. Many planters were compelled to suspend operations, owing to the difficulty of inducing the negroes to work with regularity. On the 27th of June, at a meeting of the Common Council of Galveston, assembled to take into consideration the altered condition of the colored population and other matters, the mayor took occasion to express his regret that citizens were renting houses to negroes who had left their employers, thus "giving facilities for establishing various nuisances and committing depredations upon citizens." He stated that he had received many representations as to the negroes congregating for improper purposes in the houses they occupied, and the existence of many disorders, to remedy which he was powerless. On the following day several prominent citizens waited upon General Granger, and called his attention to the condition and practices of the negroes, and the provost marshal was instructed to issue the following order:

OFFICE OF PROVOST MARSHAL GENERAL, }
DISTRICT OF TEXAS, }
GALVESTON, TEXAS, JUNE 23, 1865. }

All persons formerly slaves are earnestly enjoined to remain with their former masters under such contracts as may be made for the present time. Their own interests as well as that of their former masters, or other parties requiring their services, render such a course necessary, and of vital importance, until permanent arrangements are made under the auspices of the Freedmen's Bureau.

It must be borne in mind, in this connection, that cruel treatment or improper use of the authority given to employers will not be permitted; while both parties to the contract made will be equally bound to its fulfillment upon their part.

No persons formerly slaves will be permitted to travel on the public thoroughfares without passes or permits from their employers, or to congregate in buildings, or camps, at or adjacent to any military post or town. They will not be subsisted in idleness, or in any way except as employes of the Government, or in cases of extreme destitution or sickness; and in such cases the officer authorized to order the issues shall be the judge as to the justice of the claim for such subsistence.

Idleness is sure to be productive of vice, and humanity dictates that employment be furnished these people, while the interest of the Commonwealth imperatively demands it, in order that the present crop may be secured. No person, white or black, and who is able to labor, will be subsisted by the Government in idleness, and thus hang as a dead weight upon those who are disposed to bear their full share of the public burdens. Provost marshals and their assistants throughout the district are charged with using every means in their power to carry out these instructions in letter and spirit. By order of

Major-General GRANGER.

R. G. LAUGHLIN, Lieutenant-Colonel and Provost Marshal General, District of Texas.

A similar order was issued by Colonel G. W. Clark, at Houston, where, according to the "Telegraph," nine-tenths of the crimes brought before the courts were perpetrated by negroes. Of the freedmen who continued at work, most remained with their old masters. The following is the testimony of the editor of the Houston "Telegraph":

We have just returned from a trip to Washington County, and found the drought had nearly ruined the corn crops, and it is estimated that only one-half a crop will be made this season. The same will prove true of the potato crop. Cotton looks well, and we have been informed by old citizens that they have never before seen such a fine and heavy yield as this season. We hear loud complaints everywhere of the scarcity of hands to pick and save it. And we saw acres of the finest cotton that ever grew, dropping out of the bolls and wasting for the want of hands to save it. The planters made contracts with their former slaves to remain with them and save the crops, but they proved unfaithful and deserted the first opportunity. Thousands of bales of splendid cotton will be lost in Washington County by this cause, and the neighboring counties are no better off. We have heard good judges estimate the loss by this cause throughout the State to be 40,000 bales. It is a deplorable sight to witness large cotton fields wasting.

Subsequently a better spirit and a more correct understanding as to their new privileges began to prevail with the negroes. This was said to be owing in a great measure to the indefatigable exertions of General Granger, who travelled among them for six weeks, addressing them in plain terms with regard to their duties as well as their rights. More than half the freedmen in the lower part of the State had entered into contracts for 1866 by the 25th of December, and were ready to go to work after the holidays. The contracts were various; some were for specific monthly pay, with food, clothing, medical attendance, and the use of an acre of land; others were for monthly wages and board only; others were for a share of the crops. In some instances the payment of wages was made monthly, in others quarterly, and in others the first quarter's wages were to

be paid at the end of six months, and the balance at the end of the year. The plantations were mostly cultivated by their owners, though large farms were rented both by Northern and Southern men.

A committee, consisting of ex-Governor E. M. Pease and Mr. Swante Palm, appointed by Governor Hamilton to inquire into the condition of the State Treasury, made a report, according to which the debt in November was as follows:

Eight per cent. State Bonds and Interest to 1st Jan., 1866.....	\$998,440 00
Seven per cent. State Bonds and Interest.....	211,180 58
Due to School Fund.....	1,187,406 65
Due to University Fund.....	258,514 23
Fund accrued from estates not collected.....	21,870 90
Fund accrued from escheated estates.....	2,686 71
County Tax Fund.....	8,282 61
Special Loan Tax Fund.....	5,615 11
Assessors' Fees.....	975 66
Ten per cent. Interest Warrants, outstanding, estimate.....	180,000 00
Treasury Warrants outstanding.....	1,888,897 93
Debts due from appropriations not drawn.....	150,000 00
Estimated amount due for Militia.....	150,000 00
Estimated amount due for Soldiers' pay and supplies and transportation.....	8,000,000 00
Debt of the late Republic of Texas.....	110,613 28
Amount due J. M. Moore by Military Board.....	7,091 14
Amount due Oliver & Bro.'s by Military Board.....	10,042 62
Amount due W. S. Reed & Co. by Military Board.....	2,048 09
Probable amount that will be claimed by individuals for cotton lost under Gov. Murrah's cotton operations, say.....	80,000 00
Total.....	\$8,194,082 58
To which may be added amount placed to the credit of the several Special Funds in the Treasury in Confederate notes, as before stated.....	519,963 09
Total.....	\$8,714,065 67

There is probably no State in the Union where railroads can be constructed with so little labor and expense as in Texas, the grading being comparatively light, or where they are more needed to convey to a market the vast product of hogs, sheep, cattle, flour, and grain, for which the home consumption is not adequate to take up a thousandth part. The railroads already constructed, and in running order in July, were the Houston and Texas Central, from Hempstead to Brenham's, thirty miles; the Buffalo Bayou, Brazos, and Colorado road, from Harrisburg to Alleyton, eighty miles; the Houston Tap and Brazoria road, from Houston to Columbia, forty-five miles; the Galveston, Houston, and Henderson road, from Galveston to Houston, fifty miles; the Texas and New Orleans road, from Houston to Beaumont, sixty-five miles; and that from Shreveport, Louisiana, to Marshall. Railroads were also in the course of construction from Brazos Santiago to Brownsville, about thirty miles, and from Indianola to Victoria, about forty miles. The rolling stock on these roads was, however, unreliable and unsafe, having been much abused during the war.

The resources of this great State, six times as large as Pennsylvania, and containing thirty-three thousand square miles more than France, are only very partially developed. It is reasonable to suppose that when political

affairs become fully settled, an extensive immigration will set in, especially as its attractions become better known. The sugar and cotton region of Texas lies along the coast and a few miles up the river bottoms. These lands, though highly productive, are unhealthy, and require large capital and extensive experience in the raising of cotton and sugar to be cultivated with profit. Higher up the rivers, and behind the coast flats, is the cotton and corn region, embracing what are called the central counties. Though there are many small farms scattered through these counties, they are preëminently the seat of great plantations cultivated by the aid of negroes and mules, and a small farmer from the North would hardly feel at home among them. All the bottom lands in this section are deep, rich cotton soils, covered with a very heavy growth of cotton-wood, sycamore, elm, and other trees, crowded with underbrush, twined with vines and overhung with moss. They abound in alligators, snakes, turtles, lizards, mosquitoes, and flies; but when cleared are among the best cotton lands in the world, and though somewhat unhealthy are largely and profitably worked. Up to 1860 such lands sold uncleared at about ten dollars an acre. The balance of these lands are prairie, varying from a light sandy loam to the deepest and blackest "hogwallow," all suitable for cotton or corn.

Northwest of the central counties lies the grain region, which embraces all northern and northwestern Texas, as far as the Indian country. Commencing on the Guadalupe southwest of Austin, the grain lands stretch in a wide belt to the Red River. It is a beautiful rolling country of prairie and timber, intersected by most of the important rivers and their tributaries. Along the banks of these clear, rapid streams, are thousands of settlements, surrounded by fields of corn and grain, and herds of cattle. And yet, as the traveller rides from cabin to cabin, and from county to county, he feels that the whole country is still almost a wilderness.

The Colorado, which runs in a northwesterly direction through the centre of the State, forms the southwestern limit of the reliable farming region. Though the soil is good on the southwestern side of the river, and the country even more beautiful as well as more healthy still further west, there are comparatively few great farms, and none entirely reliable for crops, because of the droughts that often prevail. The most careless traveller is struck with the evidences of a dry country everywhere. The prairies grow gradually larger and larger further west, and put on more and more of the garb of a dry climate. The mesquit grass, green, juicy, and sweet in winter, but brown and rusty in summer, though still good for stock, becomes plentiful; the prickly pear and the cactus appear, wood-lands grow scarce and the river bottoms narrow, often with but a thread of timber to mark the windings of the

streams. Here in the long days of summer the rich black prairies bake and crisp till they seam and crack, and long winding clefts appear that every day's sun opens more and more, till they become traps into which both beast and rider may fall.

The great natural pastures, commencing upon the coast and sweeping up to New Mexico on the west, and thence around to the Red River on the north, a thousand miles in length and hundreds in width, are not left untillied because lacking in wealth of soil, convenience of location, beauty of scenery or purity of atmosphere, for western Texas abounds in all these, but from the absence of rain. Between the Colorado and San Antonio is a territory common to the plough and to cattle. Beyond the San Antonio the country watered by the Aransas, the Nueces, the Rio Pecos, and the Rio Grande, is all either occupied by stock-raisers or still vacant, the few plantations and farms once opened having been abandoned after a disastrous experience in waiting for rains. This great stock country has hundreds of thousands of cattle, horses, and sheep scattered over it, and living summer and winter upon its grasses without ever tasting hay or grain, and is annually sending to market immense herds, as valuable as though they had been fed through the long winters, and stalled in costly barns on turnips and corn.

The desert is a sandy, unwatered region, thinly covered with coarse grass, in the vicinity of New Mexico, including the "Staked Plains." There is also a long strip of the same kind of country between the Nueces and the Rio Grande, a hundred miles wide, separating Brownsville and the Mexican frontier from Corpus Christi and the settlements on the Nueces. The borders of the desert are available for pasture, but the interior is worthless for want of water, which, however, may be obtained by digging wells. The camping-grounds of Gen. Taylor, on his march across the desert from Corpus Christi to Matamoras, are marked by the great wells he dug to supply his troops with fresh water, some of which are still used.

The rivers of Texas are generally clear, and rapid, and shallow, and with unreliable navigation; but subject to sudden overflows, when every thing movable on the bottom lands is swept away. The large rivers, like the Brazos, owing to great rains in the regions of the headwaters, often rise from low water to full banks in twenty-four hours, when within hundreds of miles there is not a drop of rain falling. In the western part of the State this feature is changed, and the Rio Pecos creeps so quietly through an open, unmarked country, that a traveller might ride within five hundred yards of it and yet perish with thirst.

Any one intending to raise stock in connection with corn and grain, may settle anywhere north of the Colorado and west of the belt of post-oaks that runs up through Bastrop, Burleson, Milam, and Falls Counties, if he take care to shun the Blackjack and Landy post-oak lands

and to get plenty of good water, and rail-timber near enough for fencing. But stock-growing connected with farming never attains the dimensions nor yields the profit that it does in the purely stock country where no farming is carried on. To make the most of cattle-raising, the settler should go west of the Colorado, and from there to the Rio Grande he can hardly go amiss, if he avoid districts closely settled and seek open country, securing good water, with rail-timber enough for pens, and wood enough to burn. If he can put his cabin and pens on the south side of a piece of timber, it will be all the better, since this affords a natural shelter against the cold north winds of winter. It is better, also, to have broad, open prairies on one side for summer range, and wooded hills or river bottom on the other side for winter. If so situated, the stock will take to the open prairies in good weather, and to the shelter of the hills and bottom lands in storms, and will scatter much less than in an entirely open country like the great coast prairies.

The settler having built his pens and cabin, buys his cattle, to be delivered to him in the pen on a given day. If he takes "stock cattle," he gets cows, calves, and one and two-year-olds in equal numbers, and pays about seven dollars a head. Thus for four hundred cattle—of which one hundred are cows, one hundred calves, one hundred one-year-olds, and one hundred two-year-olds—he pays \$2,700. If he buys cows and calves, he gets the same number, that is, two hundred cows and their two hundred calves for the same money. He then fixes upon a brand for the hip or shoulder, and a mark for the ear, and has them recorded in the county records. It is always best to buy the tract where the cattle are to run, as it saves the expense of driving to a new range and herding. In the spring, for about two months, the stock-raiser knows no rest. Early and late he is riding the country, gathering up his stock and branding his calves. Then he rests till the fall, when he once more gathers, to sell his beeves. The whole country is open throughout the great stock region, and no fences set their stakes against the wandering of the cattle. They are not herded, and of course their range is a wide one.

If a stranger go to Texas with the determination to make sheep-raising his business, he should go directly to Austin, and then crossing the Colorado, and keeping west of the San Antonio road, begin to look for his ranch, for all that region is sheep country, and the best in the State. For hundreds of miles along the road, west of Austin and lying immediately northwest of the road for a very great distance, is a peculiar hilly and broken country, having plenty of short, sweet, winter grass for pasturage, and good running water; dry and gravelly hills enough to secure good health to the flock, unless scab get in; and gorges and cedar-brakes enough for shelter against the storms and cold winds. The settler must be careful to secure

good water, with wood enough to burn, and rail-timber enough for his sheep-pens. He must also make calculations for pasturage, when his flocks shall have increased largely. If he locate upon a stream having a very large tract of unwatered country behind it, he may buy a few acres along its banks near a cedar-brake, and trust to the great open country for pasturage. If he settle in a country watered on all hands, he will have to buy a large amount of land for the future grazing of his flocks. Whoever cannot monopolize the water around him will soon have many neighbors and too many flocks near him, unless he own large tracts himself. By a law of the State, all herded flocks must be kept from trespassing. But large tracts of country are open to all, and for sheep-raising are valuable only to those who control the watering-places. Cattle and horses roam over them at large, going long distances for water. The land being selected and bought—at from fifty cents to ten dollars an acre—rail pens are made close and high enough to keep out the wolves, and in a position sheltered from the northers, either on the south side of a bluff, a close cedar-brake, or a close stone fence. Along the north side a shelter-shed is put up, made of crotched posts and rails, with a roof covered with hay, straw, earth, or boards, to turn off the rains and keep the lambs dry, and then the sheep-yards are ready. A log house, pole camp, or cloth tent is then put up, a Scotch or German shepherd engaged, the flock bought, and business begun. The owner's house is put up afterwards.

It is better usually to purchase the flock in the country, as the sheep are then acclimated, and not worn down by long driving. Pure merinos are the most profitable; but being also most expensive, Mexican and mixed breeds are usually first purchased and then bred up by crossing with merino bucks. In 1860 merino ewes were worth by the flock about ten dollars a head; good Missouri or mixed, five dollars; and Mexican three dollars. A couple of generations' breeding up by pure bucks brings out a good flock from either kind. It is, however, more profitable to buy at first a better grade. A flock of five hundred good grade sheep with a pure merino buck may be bought for about three thousand dollars. One shepherd with a good dog can take care of five hundred sheep the year through, or of a thousand, except in the combing season. Few flocks are fed above what they get on the prairies; but it is well to give them a little corn or oats, or cotton-seed, or cultivated hay, through the months of January and February. If a flock is kept healthy it is the most profitable stock-raising in the world. The increase of a sheep begins at one year old, and in ten years, without loss, amounts to over a hundred-fold. The increase of a flock of five hundred sheep would therefore be worth in ten years, without drawbacks, not less than \$300,000, a business sufficiently profitable to allow a large margin for accidents and ill luck, and still leave the results very satisfactory. To

this must be added the annual clips of wool, on an average four pounds to the fleece, sold at forty cents a pound. Wool is a cash article in Texas, and can always be sold at its New York and Boston value, less the cost of transportation and insurance. The majority of wool-growers shear their sheep dry, and sell the wool in the dirt. Of those who do wash, not one in ten makes a clean job of it. Shearers go through the country in April and May, shearing at from five to eight cents per head, and tying the fleeces for sacking.

Wolves and half-wild dogs and hogs are the worst enemies of the sheep-raiser, and his folds should be wolf and hog tight. Either when hungry will attack the flock in the pen or on the prairie, and if not driven off, kill great numbers. The hogs kill only the lambs, but are terribly destructive in early spring.

THALLIUM. Among the recently discovered metals, this appears still to command the highest interest. M. Böttger has indicated a new source of this metal in the crystalline salt obtained from the mother-liquor in the salt-works at Manheim, and in which minute quantities of its chloride exist along with much of the chlorides of cesium and rubidium. R. Bunsen has also obtained thallium from a lye from the Rammelsberg pyrites in the sulphate of zinc works at Goslar. The simplest process is that of placing in the cold lye sheets of zinc: a nearly equal weight of a spongy metallic precipitate is secured. This, washed and suitably treated, yields for every cubic metre of the lye, and along with some lead and zinc, also 7.4 kilog. of cadmium, 1.6 do. of copper, and 0.6 do. of thallium. Digesting with water to which sulphuric acid is from time to time added, the cadmium and thallium dissolve, leaving the copper; and adding iodide of potassium, the result is a precipitate of 0.97 kilog. of pure iodide of thallium, readily purified by washing.

The symbol adopted for thallium is Tl; its equivalent is 204, or according to Werther about 203.5. M. Lamy finds the usual series of phosphates, pyrophosphates, and metaphosphate of thallium: these salts are distinguished from those of the alkalis proper by giving—their solutions being neither too hot nor too dilute—white precipitates with both chlorhydric and nitric acids. M. Strecker has investigated the salts of the peroxide of thallium, or thallic oxide, TlO_2 —those of thallic oxide having been before examined. Among the former he finds a sulphate and nitrate, and several double salts, including an oxalate of peroxide of thallium and ammonia. By experiment on animals, M. Lamy finds that thallium, at least in form of sulphate, possesses very decided poisonous properties; and M. Paulet has also treated of the same, in a memoir to the French Academy.

It is stated that thallium is very generally found associated with potassium and sodium; and Lamy's classification of it with the alkaline metals is still sustained by many reactions, and especially by its forming by substitution a series

of alcohols, the *thallic*, the analogy of which to those afforded in like manner by potassium and sodium is striking. In this view of the nature and relations of thallium, Dumas and Böttger coincide. M. Erdmann, on the contrary, insists on certain differences between thallium and the alkaline metals; as, that while the oxide of the former behaves as an alkali, its carbonate, unlike those of potassa and soda, does not show the alkaline reaction. M. Nicklès also, agreeing with the view of Mr. Crookes, indicates resemblances of thallium to lead; as, that it can be made to form a sort of "tree of Saturn;" that it yields an oxide, sulphide, chloride and iodide, that are insoluble in water; and that its compounds, like the lead preparations, are highly poisonous. In conductivity for heat, also, it approaches lead, or more closely, perhaps, iron. In a note in the *Amer. Jour. of Science*, January, 1866, M. Nicklès cites from his own communication in the *Journal of Chemistry and Pharmacy*, of November preceding, the fact that we have now an alum with a base of silver, as also one with a thallium base, isomorphous with that of potash, etc.; and he infers that all these bodies, unlike in other respects, and perhaps barium also, as suggested by Baudrimont, may be put in the same group. The facts, he thinks, show that thallium should be considered as a point of union between the alkaline metals on one side and lead and silver on the other.

The thallic alcohols are formed by replacing an equivalent of hydrogen in wood-spirit, common alcohol, etc., by one of thallium, giving $C_2H_5(Tl)O$, $C_4H_9(Tl)O$, $C_6H_{11}(Tl)O$, etc. The *first* of these, the methyl-compound, is solid and crystalline. The *second*, ethyl-thallic alcohol, *i. e.*, the analogue of common alcohol, is a heavy, colorless, oily liquid: density at $0^\circ C.$, 3.55; indices of refraction for the spectral lines *B* and *H*, respectively 1.661 and 1.759; dispersive power—difference of the preceding values, —0.098 (that of bisulphide of carbon being but 0.079). Thus, this is at once the heaviest, the most refractive, and the most dispersive of yet known organic compounds. The *third*, or amyl-thallic alcohol, is also a colorless oil. These alcohols decompose on boiling, and by addition of most acids, of chloroform, or of water—the last producing a hydrate of oxide of thallium, and regenerating the alcohol proper. They are all soluble in the corresponding alcohol and in ether; and they burn in air with the green flame proper to the metal. M. Nicklès has prepared a memoir upon chloro- and bromo-metallic ethers of thallium.

The author last named has also shown that spectrum-analysis fails to reveal the presence of thallium, when its compounds are blended with those of sodium, and especially with its chloride, the green ray in these cases not making its appearance. It will follow, in view of the known presence of sodium in the atmosphere of the sun and in those of some of the fixed stars, that, although their light may

not show the green thallium line, the metal can still be present upon those bodies. Further, before testing mineral waters with the spectro-scope for thallium, it would appear necessary to free the former of sodium-compounds; and a search for the poison of thallium in the animal viscera should be preceded by a like elimination.

THORIUM. From analyses of its sulphate, obtained by action of sulphuric acid on orange-ite or on thorite, Delafontaine has determined the equivalent of this element. The sulphate, as first procured, is described as heavy, white, and caseous; consisting of extremely fine felted needles; later, without too much water, it changes to clear and colorless crystals. The anhydrous salt on ignition gave 52.51 per cent. of pure thoria. In two forms of hydrated sulphate, the unusual composition is presented of 9 HO to four atoms of sulphate proper in the one, and to two in the other. The author regards the true formula of thoria as ThO_2 . In this case, taking $\text{O}=8$, the equivalent of thorium is 115.6; while, assuming $\text{O}=16$, its equivalent (the element being considered tetratomic) must be doubled, and becomes 231.2.

TRICHONOSIS. (See SWINE.)

TUNGSTEN. In an extended memoir on this metal and its compounds (*Ann. de Chimie et de Physique*, January, 1864), Persoz has stated conclusions differing widely from those received among chemists, and some of which are the following: 1. That the constitution and properties of its oxides show tungsten to belong to the group of biatomic radicals, arsenic, antimony, and phosphorus. 2. That its equivalent, oxygen=8, is 153.2. 3. That with oxygen it forms two compounds, an oxide and an acid, and containing respectively three and five equivalents of oxygen. 4. That by their union these two produce a third oxide (of the class of saline oxides of Dumas), corresponding to the formula, 2WO_3 . 5. That sulphur, chlorine, and bromine form with it compounds corresponding to those given by oxygen. 6. That mixtures of variable proportions of anhydrous acid with the corresponding chloride have been mistaken for an oxychloride, which latter this element, any more than phosphorus, does not afford.

TURKEY, an empire in Eastern Europe, Western Asia, and Northern Africa. Present ruler, Sultan Abdul-Aziz-Khan, born February 9, 1830; succeeded his brother, June 25, 1857. Heir apparent, Abdul-Medjid-Khan, nephew of the Sultan. The area and population of the empire are estimated as follows:

	Area in English square miles.	Population.
Possessions in Europe.....	207,488	15,730,000
" Asia.....	660,870	16,850,000
" Africa.....	943,740	5,650,000

It is estimated that the trade of Turkey with foreign countries amounted, in 1863, to £46,000,000, and that between the provinces to £20,000,000, making a total of £66,000,000 for the year.

On April 19th an imperial decree was issued

creating a Privy Council composed of the heads of the various Government departments. The decree provides that the Privy Council be held under the personal presidency of the Sultan, and meet weekly at the palace.

The most important reform measure prepared and partly executed during the year 1865, was the confiscation by the State Government of the property of the mosques. Acting on his civil prerogative, and in spite of the Ulema who threaten him with the canon law of the Koran, the Sultan determined to convert the whole of the mosque lands into a salable and transferable tenure, subject only to limitation of the right of testamentary demise in the event of a failure of heirs, when the escheat will no longer be to the clergy but to the State. Thus, in Turkey as in Italy, the ecclesiastical lands will be secularized. The mosques will receive twenty or thirty per cent. of the revenue from them, a change which will almost triple their income; and the State, instead of paying as hitherto a large supplemental sum to the mosques, will enjoy from ten to twelve million dollars annually. On the lands thus converted—and almost all Constantinople stands on such mosque land—capitalists will now be tempted to advance money, others will purchase them, and the greatest obstacle to progress in Turkey, next to Mohammedanism itself, will be removed.

At the meeting of the Social Science Congress, in 1865, an instructive paper on female education among the Christian subjects of the Porte was contributed by Misses G. M. Mackenzie and Irby. There are from seven to eight millions of Slavonic Christians in the Ottoman Empire. Wherever the Christians have a native government, public instruction is an object of solicitude; whereas the Mohammedan Government of Turkey does nothing for the education of its Christian subjects. For instance, the self-governing principality of Servia, with one million of inhabitants, has, during the last thirty-five years, provided itself with 818 primary schools, 6 gymnasias, 2 commercial schools, a theological seminary, a civil and military academy; while in neighboring Bulgaria, which is administered by Mussulmans, five to six millions of Slavonic inhabitants have not a single Slavonic academy or higher seminary. In the smaller Slavonic districts—Old Servia, Herzegovina, and Bosnia—education stands still lower than in Bulgaria. Female education was impeded by the lack of qualified teachers, not to be obtained in Turkey, and young girls could not well be sent out of their own country to be trained. However, the native women themselves had started some schools, which, if supplied with proper teachers, would form a most hopeful instrument for civilizing the community. To undertake this work an Association has been formed for the "promotion of education among the Slavonic Christians in Turkey." The scheme is purely educational, without any object of making proselytes from the Oriental Church,

one of its patrons being the Archbishop of Canterbury, another the Metropolitan of Servia.

The emigration of the Circassian tribes to Turkey continued, in 1865, unabated. Two thousand Tchechers with their arms, horses, and cattle, were received at Kars by the Turkish authorities, having been conducted thither by Russian officers. The whole of the tribe, numbering some 60,000 souls, was expected to follow the same route, and be dispersed over the district of Mouch, Sirvas, and Diarbekir. The Kabardians also intimated their desire to emigrate, but the Porte replied to their application that it could not receive them before next year. Another tribe, the Abases, expressed a wish to return to their native mountains, and requested the Turkish Government to furnish them with vessels for the purpose. They were, however, informed that they might either proceed to Russia by land, or be distributed in the provinces of the interior. The arrivals in Turkey, up to the last months of 1865, make the total number of Circassian emigrants encamped on the Asiatic shore of the Black Sea 172,000.

The people of the United Danubian Principalities (Roumania, Moldo-Wallachia) seemed to acquiesce in the *coup d'état* accomplished on May 14, 1864, and in all the decrees issued by the Prince since that time.* There was, however, a strong dissatisfaction with the administration of the Prince among a large portion of the people, and on August 15th an insurrection, which had been expected for some time, broke out at Bucharest. A shot fired in the market-

place was the signal agreed upon, and the people at once attacked the soldiers, who were compelled to retreat. The authorities, however, soon brought out all the troops at their command, and the insurrection was put down. The presumed leaders of the insurrection, MM. Bratiano, Golesco, Brailo, and Rosetti, were arrested. It was commonly believed that the outbreak in Bucharest was connected with a widely spread organization, embracing Bosnia, Servia, and Bulgaria, for the old object of shaking off the last remnant of dependency on the Ottoman Government.

On December 17th, Prince Couza opened the Roumanian Chambers with the customary solemnities, and delivered a lengthy speech, reviewing the situation of the country. He announced to the deputies that he conceded to them the right of interpellation, and the means of carrying it into effect. The settlement of the Orthodox Roumanian Church had been realized by the installation to the National Synod. The civil code had been in force since the 1st of December, 1864, and the criminal code since April, 1865. The new organization of the courts and trial by jury afforded the surest guaranty of impartiality to all accused persons. The surveys for the railway from Galatz to the Austrian frontier were completed, and a portion of the works had already begun. The contractors for the railway from Bucharest to Giurgevo, were making ready to commence operations. An extradition cartel and telegraphic conventions had been concluded with Austria, Russia, and Servia.

U.

UNION COMMISSION, THE, now known, in consequence of its coalition with the Freedmen's Commission, as "THE AMERICAN FREEDMEN'S AND UNION COMMISSION." In the ANNUAL CYCLOPEDIA for 1864, some account was given, under the head of U. S. UNION COMMISSION, of the origin and early progress of this organization. At the close of active operations of the war, it found a great work upon its hands, and was compelled to make earnest appeals to the public for funds. There were vast numbers of poor whites and blacks, many of them persons who had once lived in luxury, who were reduced by the war to a condition of beggary. Most of these who needed immediate assistance, were doubtless in the cities and larger towns of the South; the greater part of them were loyal to the United States Government, but had been unable to leave the South, and some of them had been imprisoned for their loyalty. To these and to the thousands who made their way to the Northern

cities the Union Commission extended temporary relief, sending its agents to Savannah, Charleston, Richmond, and other points in the South, aiding about 20,000 suffering poor in Middle Tennessee, and a much larger number in East Tennessee and Western Virginia; about 15,000 in Richmond and vicinity, and sending supplies of clothing, seeds, agricultural implements, etc., over all the South, and particularly into the Valley of the Shenandoah, where there was great destitution. It also established temporary homes for refugees in New York City, Philadelphia, Baltimore, etc. Another branch of its work was the establishment or reopening (where they had formerly existed) of free schools for the children of the poor. It has been especially active in this work in Tennessee, Arkansas, North Carolina, and Georgia, and in some portions of Virginia. It had expended, to October, 1865, about \$150,000 in money and supplies. In the autumn, however, the barracks where the refugees had received aid, and rations from Government were nearly all closed, and as the Government care for the white refugees had been turned over to the

* See ANNUAL CYCLOPEDIA for 1864, for a full account of the *coup d'état*.

Freedmen's Bureau, with which the Freedmen's Commission or the local organizations of which it was composed were working in concert, it seems desirable to have but one organization to appeal to the public for aid, and thus to reduce the working expenses while maintaining the efficiency of the charitable operations in which both were now engaged. The aims and objects of the two organizations were, to a considerable extent, identical, for while the Union Commission aided blacks as well as whites, the Freedmen's Commission opened the doors of its schools and its stores of supplies to whites as well as blacks. Fully impressed with the idea that they could become more efficient by consolidation than by separate action, a proposition for union was made by the Freedmen's Commission in November, 1865, and a conference committee from the two Commissions appointed, who agreed upon a plan which was, after a full discussion, ratified at a joint meeting of the two Commissions, held at the Chamber of Commerce, in New York, and this was finally consummated by the adoption of a Constitution, on the 31st of January. At the meetings at which this union was effected, representatives were present from Boston, New York, Philadelphia, Baltimore, Pittsburg, Cleveland, and Chicago. The union was subsequently formally ratified by the Societies in New England, New York, Cleveland, and Detroit. The

fundamental principle of the Commission, as thus organized, was set forth in the Constitution in these words:

The object of this Commission is to aid and co-operate with the people of the South, without distinction of race or color, in the improvement of their condition upon the basis of industry, education, freedom, and Christian morality. No schools or supply depots shall be maintained from the benefits of which any shall be excluded because of color.—*Art. II. Constitution.*

The officers of the new consolidated organization were—Bishop Matthew Simpson, Philadelphia, President; Rev. Joseph P. Thompson, D. D., N. Y. William Lloyd Garrison, Boston; Charles G. Hammond, Chicago, Vice-Presidents; Francis G. Shaw, New York, Chairman Executive Committee; Rev. Lyman Abbott, General Secretary, New York; J. Miller McKim, Corresponding Secretary, New York; George C. Ward, Esq., Treasurer, New York; Rev. J. R. Shipherd, Washington Secretary, Washington, D. C.; Rev. J. M. Walden, D. D., Western Secretary, Chicago. The headquarters of the Commission were in New York.

The work of the United Commissions belongs to the year 1866, and must be recorded in our next volume. We append, however, the following table, which exhibits, though not quite completely, the operations of the two organizations during the year 1865:

TABLE OF OPERATIONS OF FREEDMEN'S COMMISSION AND OF UNION COMMISSION IN PART. SHOWING NUMBER OF SCHOOLS, PUPILS, AUXILIARIES, MONIES, SUPPLIES, ETC., FOR THE YEAR 1865.

ORGANIZATION.	Number of Schools.	Number of Teachers.	Number of Pupils.	Number of Auxiliaries.	Am't of Money Collected.	Value of Supplies Collected.	Money and Supplies from Abroad.	Value of Supplies Shipped.	Am't of Money Expended.

Pittsburg Freedmen's Aid Com.¶.....	6	18	850
Totals.....	307	773	40,744	880	\$402,923 09	\$367,709 22	\$84,597 48	\$493,255 27	\$323,670 06

* This statement is merely a proximate showing of the teachers paid by the Baltimore Association. There are in Maryland, under the direction of this Branch, but sustained in part by other Associations, and included in their reports, a total as follows: Schools, 60; teachers, 63; pupils enrolled, 6,000; average attendance, 5,000.

† Since January 1st, the amount in the treasury has been increased to \$6,023.45, the expenditures to \$23,662.62, goods to the value of \$48,500 have been shipped, and arrangements have been made for opening schools at Atlanta, Selma, Montgomery, and Talladega.

‡ The present number of teachers employed is 54.

§ The report received shows schools at 28 different points, but not the number at each point. This statement as to the total number of schools is based upon estimates received through other sources. Agents are included among the teachers in this report, and the last monthly report shows but 47 teachers and 24 schools now in actual service. Of the \$63,000 and odd collected, a considerable portion was received from Europe.

¶ No report has been received from the Pittsburg Association. These figures are obtained from a recently published newspaper report.

In all, probably from \$75,000 to \$100,000 Commission than is here accounted for in the more was received and expended by the Union foregoing table.

UNITARIANS. The first National Convention of the Unitarians of the United States, assembled in New York on April 5th, in pursuance to a call from the Committee of Ten (8 ministers and 7 laymen), which had been appointed at the special meeting of the American Unitarian Association, held in Boston, on December 7, 1864. The Convention elected the following officers: President, Gov. John A. Andrew, of Massachusetts; Vice-Presidents, Hon. T. D. Eliot, of New Bedford; Hon. John G. Palfrey, Cambridge, Mass.; Hon. Wayman Crowe, St. Louis; Hon. Ichabod Goodwin, Portsmouth, N. H.; Hon. A. A. Low, Brooklyn; Hon. William C. Bryant, New York; Rev. Orville Dewey, D. D., Sheffield, Mass.; Rev. E. S. Gannett, D. D., Boston; Rev. George W. Hosmer, D. D., Buffalo. Secretaries, Rev. E. E. Hall, Boston; Rev. Carleton A. Staples, Milwaukee; J. A. Frothingham, Esq., Brooklyn. Treasurer, H. P. Kidder, Esq., Boston.

Reports were made to the Convention from the American Unitarian Association, the Western Conference, the Maine Unitarian Conference, the Meadville Theological School, the Unitarian Association of New York, the New Hampshire Association, the Sunday-school Society, the Massachusetts Evangelical Missionary Society. The Committee on Credentials reported 190 congregations, represented by 379 lay delegates, and with few exceptions by their pastors; also delegates from several associations. Rev. Dr. Bellows, chairman of the Committee of Twelve, to whom were referred all doctrinal points, reported the following constitution for adoption by the Convention:

Constitution of the National Unitarian Convention.
—PREAMBLE. Whereas, The great opportunities and demands for Christian labor and consecration increase our sense of the obligation of all disciples of the Lord Jesus Christ to prove their faith by self-denial and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of his Son:

ART. 1. Therefore, the Christian churches of the Unitarian faith here assembled unite themselves in a common body to be known as the National Conference of Unitarian Churches, to the end of reorganizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work.

ART. 2. This National Convention shall be composed of such delegates elected annually, not to exceed three from any church, including its minister, who shall officially be one, as any of our churches may accredit to it by a certificate of their appointment.

ART. 3. The American Unitarian Association, the Western Conference, and such other theological, academic, or humane organizations in our body as the Conference may see fit to invite, shall be entitled to representation by no more than three delegates each.

ART. 4. The Conference shall meet annually at such time as it may designate at its successive annual sessions.

ART. 5. The officers shall consist of a president, six vice-presidents, three secretaries, an honorary, a recording, and corresponding secretary, and a council of ten, half ministers and half laymen, who shall be elected at each meeting, to hold their office for one year and until their successors are appointed.

ART. 6. The Council of Ten shall have charge, during the intervals of the annual sessions, of all business having reference to the interests of the Conference, and intrusted to it by that body, which is hereby declared a purely advisory one.

ART. 7. The National Conference, until further advised by its experience, adopts the existing organizations of the Unitarian body as the instruments of its power, and confines itself to recommending to them such undertakings and methods as it judges to be in the heart of the Unitarian denomination.

ART. 8. The foregoing constitution may be amended at any regular meeting of the Conference, by a vote of not less than two-thirds of the delegates accredited thereto.

After an animated debate, the constitution and the preamble were adopted. Mr. William Cullen Bryant, from the Committee on Patriotic Resolutions, reported the following:

Resolved, That this Convention give solemn thanks to Almighty God for the success with which He has crowned the arms of the United States in the war for the suppression of a most wicked rebellion, for the very near prospect of peace, and for the opening which is made by the extinction of slavery for the diffusion of Christianity in its true spirit, as a religion of love, mercy, and universal liberty.

The words "and universal liberty" were added on the motion of the Rev. J. S. May. The resolution was then adopted by rising.

The Convention resolved to raise, during the coming year, and hereafter annually, the sum of \$100,000 for denominational purposes, and to raise another \$100,000 for the endowment of Antioch College (Yellow Springs, Ohio), which, by a recent amendment of the charter, had passed from the joint control of the Unitarians and the Christian Connection under the sole control of the Unitarians. A great difference of opinion was found to prevail among the members as to the person of Christ and the doctrine of the Unitarian Church, though it led to no open rupture. The following resolutions, which had been offered by A. A. Low, were referred to the Committee of Ten:

That this Convention should claim the assent of all who participate in it to the following fundamental doctrines: 1. Belief in the Holy Scriptures as containing a revelation of God to man and as deduced therefrom. 2. Belief in one God the Father. 3. Belief in one Lord Jesus Christ our Saviour, the Son of God, and His specially appointed messenger and representative to our race, gifted with supernatural powers, approved of God by miracles and signs and wonders which God did by Him. 4. Belief in the Holy Ghost, the Comforter. 5. Belief in the forgiveness of sins, the resurrection from the dead, and life everlasting.

In accordance with a report of the Committee on Nominations, the following were chosen officers of the National Conference, until the next annual meeting: For president, Governor Andrew; vice-presidents, Messrs. Hosmer, Palfrey, Low (of Brooklyn), Goodwin, and Dewey; honorary secretary, Mr. Carlton; corresponding secretary, Mr. Hale; recording secretary, J. H. Frothingham. For members of the council, Messrs. Bellows, Carter, Partridge, Eaton, Clarke (of Boston), Eliot, Low (of Massachusetts), Sawyer, Hopworth, and Mayo.

At the annual meeting of the British and Foreign Unitarian Association, the following motion was offered by Dr. Bache, of Birmingham, for the purpose of defining the doctrinal standpoint of English Unitarians:

That, *whereas*, since the last annual meeting of this association, the terms Christ, Christian, Christianity, have been employed by some Unitarian writers and in some Unitarian publications as consistent either with clearly-implied or distinctly-avowed repudiation of the special and immediate divine origin and authority of the Christian revelation; and *whereas* an ambiguity has thereby been occasioned in the terms which at present define the principles and objects of this Unitarian Association, the committee for the ensuing year be instructed to take measures for the removal of that ambiguity, and so to express the principle and objects of the Association that no reasonable doubt may remain respecting them.

The motion was rejected.

UNITED STATES. The dawn of the year 1865 found the Northern States more vigorously engaged in the prosecution of the war than at any previous time. A new levy of men had been called in December, and the greatest activity prevailed to make up the quota of cities, towns, and counties, before the 15th of February, when a draft was ordered to take place to fill the deficiencies. At the same time there was no cessation of hostilities; the armies kept the field, and vigorously pressed the enemy at every point. The earnestness of all these efforts was inspired by the belief on the part of the Government and people that the end was near, and a complete victory on their side almost within grasp. Equal exertions were made to consummate those civil and political measures supposed to be indispensable upon the success of the Federal arms. The antislavery amendment of the Constitution, which had failed in the House at the previous session of Congress, was reconsidered by that body immediately after it convened in December, and passed in January ensuing. This action of that body was made the occasion for a serenade of President Lincoln and others. On addressing the assemblage on the evening of January 31st, the President said:

He supposed the passage through Congress of the constitutional amendment for the abolishment of slavery throughout the United States was the occasion to which he was indebted for the honor of this call. The occasion was one of congratulation to the country and the whole world. But there is a task yet before us—to go forward and have consummated by the votes of the States that which Congress had so nobly begun yesterday. He had the honor to inform those present that Illinois had already to-day done the work. Maryland was about half through, but he felt proud that Illinois was a little ahead. He thought the measure was a very fitting, if not an indispensable adjunct to the winding up of this great difficulty. He wished the reunion of all the States perfected, and so effected as to remove all cause of disturbance in the future; and to attain this end it was necessary that the original disturbing cause should, if possible, be rooted out.

He thought all would bear him witness that he had never shrunk from doing all that he could to eradicate slavery, by issuing an emancipation proclamation. But that proclamation falls far short of what the amendment will be when fully consummated. A

question might be raised whether the proclamation was legally valid. It might be argued that it only aided those who came into our lines, and that it was inoperative as to those who did not give themselves up; or that it would have no effect upon the children of slaves born hereafter; in fact, it would be urged that it did not meet the evil. But this amendment is a king's cure-all for all the evils. It winds the whole thing up. He would repeat that it was the fitting, if not the indispensable, adjunct to the consummation of the great game we are playing. He could not but congratulate all present, himself, the country, and the whole world, upon this great moral victory. In conclusion, he thanked those present for the call.

The proceedings of the Government relative to peace resulted in an interview at Fortress Monroe between President Lincoln and Secretary Seward, on the one side, and Messrs. A. H. Stephens, Campbell, and Hunter, on the other: they are stated in full in the *ANNUAL CYCLOPEDIA*, vol. iv., for 1864, pp. 710, etc. This interview was followed by an excited meeting at Richmond (*see* CONFEDERATE STATES), and subsequently by the adoption, in the Congress assembled there, of measures for arming the slaves. The views of President Lincoln on putting the slaves into the army were expressed on March 17th to an Indiana regiment, upon the occasion of the presentation of a captured Confederate flag to the Governor of that State. Mr. Lincoln being present, thus addressed the assemblage:

Fellow-citizens: It will be but a very few words that I shall undertake to say. I was born in Kentucky, raised in Indiana, and live in Illinois, and I now am here, where it is my business to be, to care equally for the good people of all the States. I am glad to see an Indiana regiment on this day able to present this captured flag to the Governor of the State of Indiana. I am not disposed, in saying this, to make a distinction between the States, for all have done equally well.

There are but few views or aspects of this great war upon which I have not said or written something whereby my own views might be made known. There is one, the recent attempt of our erring brethren, as they are sometimes called, to employ the negro to fight for them. I have neither written nor made a speech upon that subject, because that was their business and not mine; and if I had a wish upon the subject, I had not the power to introduce it or make it effective.

The great question with them was, whether the negro, being put into the army, will fight for them. I do not know, and therefore cannot decide. They ought to know better than we, and do know. I have in my lifetime heard many arguments why the negro ought to be a slave; but if they fight for those who would keep them in slavery, it will be a better argument than any I have yet heard. He who will fight for that, ought to be a slave. They have concluded, at last, to take one out of four of the slaves and put him in the army; and that one out of four, who will fight to keep the others in slavery, ought to be a slave himself, unless he is killed in a fight. While I have often said that all men ought to be free, yet I would allow those colored persons to be slaves who want to be; and next to them those white men who argue in favor of making other people slaves. I am in favor of giving an opportunity to such white men to try it on for themselves. I will say one thing with regard to the negro being employed to fight for them that I do know. I know he cannot fight and stay at home and make bread too; and as one is about as important as the other to them, I don't care which they do. I am rather in favor of having them try them as soldiers. They lack one vote of doing that, and I wish

I could send my vote over the river, so that I might cast it in favor of allowing the negro to fight. But they cannot fight and work both. We must now see the bottom of the enemy's resources. They will stand out as long as they can, and if the negro will fight for them, they must allow him to fight. They have drawn upon their last branch of resources, and we can now see the bottom. I am glad to see the end so near at hand. I have said now more than I intended to, and will, therefore, bid you good-bye.

Previously, on March 4th, the inauguration of President Lincoln for a second term had taken place. The weather was inclement, but the assemblage was large. The oath of office was administered by Chief Justice Chase, after which the inaugural address was read by the President (*see PUBLIC DOCUMENTS*). On entering upon his second term the President retained all the members of his Cabinet, as follows:

Secretary of State—William H. Seward.
Secretary of the Treasury—Hugh McCulloch.
Secretary of War—Edwin M. Stanton.
Secretary of the Navy—Gideon Welles.
Postmaster-General—William Dennison.
Secretary of the Interior—J. P. Usher.
Attorney-General—James Speed.

On March 8th, in consequence of the mutual explanations which had taken place between the Governments of the United States and Great Britain, the order was rescinded which required passports from all persons entering the United States from Canada. This order had been issued on the 17th of December, 1864, in consequence of the facility with which hostile persons could invade the territory of the United States and escape apprehension. About the same time the President, in compliance with an act of Congress, issued his proclamation requiring all absentees from the army or navy to return to duty within sixty days, or they would be regarded as having voluntarily relinquished and forfeited their rights of citizenship, and be forever incapable of exercising any rights of citizens. On March 14th the President issued an order directing the provost marshals to arrest any persons in the United States who shall have engaged in holding intercourse or trade by sea with the insurgents, if citizens or domiciled aliens, and all non-residents and foreigners who had been engaged in violating the blockade of the Southern ports, and who remained in the country twelve days after the publication of his order.

Meanwhile military affairs were rapidly coming to a crisis. General Grant had informed the President that Richmond would hold out only a few days longer, and the latter went to City Point, to be present at the final events of the war. His despatches of April 2d will be found under "ARMY OPERATIONS." It was now apparent that the war was over, and the North victorious. The Southern States were again to become active members of the Federal Union, and the question arose as to the terms upon which the Southern people should be recognized as in their former position, to resume which they almost universally soon expressed an earnest desire. The proceedings and views

of the President on this subject while at Richmond, after its evacuation, and previous to his return to Washington, are very imperfectly known, as his death followed so soon afterwards. A witness before the joint Committee of Reconstruction at the first session of the Thirty-ninth Congress (Mr. Cook), on April 11, 1866, testified to the propositions submitted by President Lincoln to Judge Campbell, Commissioner to the Fortress Monroe Conference. Mr. Lincoln suggested three points as essential to peace: First, the disbandment of the rebel armies; second, the full submission of the Southern people to the authority of the United States; and third, no abatement by the Executive from his position on the emancipation of the slaves. This was submitted by Judge Campbell, in Richmond, a few days after the evacuation of that city. To these were added paragraphs in which the late President declared that any propositions not inconsistent with the foregoing, would be received and considered in a spirit of kindness and liberality; also that those who should immediately accept these terms would place themselves in a condition to avoid the operation of the confiscation law, the execution of which was optional with the President. A special correspondent of the New York "Times," writing from Washington on April 22d, said:

While President Lincoln was in Richmond, Judge Campbell told him that, in an interview with Davis, Breckinridge, and Benjamin, just before they left, he said that, as there was no hope for the Confederacy, and President Lincoln could not negotiate with them, he (Lincoln) would negotiate with the States, and recognize the right of the Virginia Legislature to control the troops of that State.

He then told Mr. Lincoln that if he would permit that body to convene, it would, doubtless, recall the Virginia troops from the field.

Mr. Lincoln cautioned Judge Campbell against any misunderstanding, and gave him in writing his only terms, which were those tendered in the Hampton Roads interview, to which he added another, that in case the leaders persisted in the war, their property should be relentlessly confiscated.

At City Point General Sherman met and had an interview with the President. General Sherman's views of the terms of reconstruction after this interview may be found under "ARMY OPERATIONS." On April 6th President Lincoln sent the following order to General Weitzel, in command at Richmond:

HEADQUARTERS ARMIES OF THE UNITED STATES, }
 CITY POINT, April 6, 1865. }

To Major-General Weitzel, Richmond, Va.:

It has been intimated to me that the gentlemen who have acted as the Legislature of Virginia, in support of the rebellion, may now desire to assemble at Richmond and take measures to withdraw the Virginia troops and other support from resistance to the General Government. If they attempt it, give them permission and protection, until, if at all, they attempt some action hostile to the United States, in which case you will notify them, give them reasonable time to leave, and at the end of which time arrest any who remain. Allow Judge Campbell to see this, but do not make it public.

Yours, etc.,

A. LINCOLN.

On April 12th the "Whig," a newspaper issued at Richmond, contained the following in its pages:

An address "to the people of Virginia," earnestly requesting the Governor, Lieutenant-Governor, members of the Legislature, and various prominent citizens of Virginia, to assemble in Richmond on the 25th inst., is published in to-day's paper. The signatures to this call will secure for it not only the respectful consideration of the persons addressed, but, in the present attitude of affairs, will induce many of them to respond with alacrity to the summons.

It is understood that this invitation has been put forth in pursuance of the plan of proceeding assented to by President Lincoln. At all events, it will be hailed by the great body of the people of Virginia as the first step toward the reinstatement of the "Old Dominion" in the Union.

It is probable that some of the members of the Legislature may decline to come. In every such case, the people of the county or senatorial district should select some influential and intelligent citizen who is willing to take part in this business, and commission him, as far as they can, to represent them at the conference. The views and purposes of the members of the Legislature should be ascertained at once.

Every one can foresee difficulties in the way of formal action in the beginning. Several complex questions are to be met at the threshold, but "where there's a will there's a way," and whatever the difficulties presented the important business must be undertaken.

The following is the address referred to:

To the People of Virginia: The undersigned, members of the Legislature of the State of Virginia, in connection with a number of the citizens of the State whose names are attached to this paper, in view of the evacuation of the city of Richmond by the Confederate Government, and its occupation by the military authorities of the United States, the surrender of the Army of Northern Virginia, and the suspension of the jurisdiction of the civil power of the State, are of the opinion that an immediate meeting of the General Assembly of the State is called for by the exigencies of the situation.

The consent of the military authorities of the United States to the session of the Legislature in Richmond, in connection with the Governor and Lieutenant-Governor, to their free deliberation upon public affairs, and to the ingress and departure of all its members under safe conducts, has been obtained.

The United States authorities will afford transportation from any point under their control to any of the persons before mentioned.

The matters to be submitted to the Legislature are the restoration of peace to the State of Virginia, and the adjustment of questions involving life, liberty, and property, that have arisen in the State as a consequence of the war.

We, therefore, earnestly request the Governor, Lieutenant-Governor, and members of the Legislature to repair to this city by the 25th April instant.

We understand that full protection to persons and property will be afforded in the State, and we recommend to peaceful citizens to remain at their homes and pursue their usual avocations, with confidence that they will not be interrupted.

We earnestly solicit the attendance in Richmond, on or before the 25th of April instant, of the following persons, citizens of Virginia, to confer with us as to the best means of restoring peace to the State of Virginia. We have procured safe conduct from the military authorities of the United States for them to enter the city and to depart without molestation: Hon. R. M. T. Hunter, A. T. Caperton, William C. Rives, John Letcher, A. H. H. Stuart, R. L. Montague, Fayette McMullen, J. P. Holcombe, Alexander Rives, B. Johnson Barbour, James Barbour, William

L. Goggin, S. B. Baldwin, Thomas S. Gholson, and those other persons for whom passes have been procured, and which have been forwarded to them, etc. etc. Signed by—

J. M. Marshall, Senator, Fauquier; James Nelson, Senator, Marion; James Venable, Senator elect, Petersburg; David I. Burr, of House of Delegates, Richmond City; L. S. Hall, of House of Delegates, Weltzel County; J. J. English, of House of Delegates, Henrico County; William Ambers, of House of Delegates, Chesterfield County; A. M. Kelly, of House of Delegates, Petersburg; H. W. Thomas, Second Auditor of Virginia; St. L. L. Moncure, Chief Clerk Second Auditor's office; Joseph Mayo, Mayor, City of Richmond; Robert Howard, Clerk Hustings Court, Richmond City; Thomas U. Dudley, Sergeant, Richmond City; Littleton Tazewell, Commonwealth's Attorney, Richmond City; William T. Joynes, Judge of Circuit Court, Petersburg; John A. Meredith, Judge of Circuit Court, Richmond; William H. Lyons, Judge of Hustings Court, Richmond; William C. Wickham, Member of Congress, Richmond District; Benjamin S. Ewell, President of William and Mary College; Nat. Tyler, Editor Richmond Enquirer; R. F. Walker, Publisher of Examiner; J. R. Anderson, Richmond; R. R. Howison, Richmond; W. Goddin, Richmond; P. G. Bayly, Richmond; F. J. Smith, Richmond; Franklin Stearnes, Henrico; John Lyon, Petersburg; Thomas B. Fisher, Fauquier; William M. Harrison, Charles City; Cyrus Hall, Ritchie; Thomas W. Garrett, King and Queen; James A. Scott, Richmond.

I concur in the preceding recommendation.

J. A. CAMPBELL.

Approved for publication in the Richmond Whig and in hand-bill form.

G. WEITZEL,

Major-General Commanding.

RICHMOND, VA., April 11, 1865.

The same print of April 15th says: "An informal meeting of citizens and a few members of the Legislature was held on the previous evening. The motive of the gentlemen in coming together was to hear from Judge Campbell the terms upon which President Lincoln had expressed himself as willing that Virginia might return to the Union. A committee was appointed to inform the Legislature and Gov. Smith of President Lincoln's terms, who were to leave the city as soon as passports could be procured."

On the evening of April 11th the President's mansion and other public buildings in Washington were illuminated in consequence of the surrender of Gen. Lee and his army. President Lincoln on that occasion addressed the assemblage chiefly in relation to the restoration of the Union. He said:

By these recent successes, the reinauguration of the national authority, reconstruction, which has had a large share of thought from the first, is pressed much more closely upon our attention. It is fraught with great difficulty. Unlike the case of a war between independent nations, there is no authorized organ for us to treat with. No one man has the authority to give up the rebellion for any other man. We simply must begin with and mould from disorganized and discordant elements. Nor is it a small additional embarrassment that we, the loyal people, differ among ourselves as to the mode, manner, and measure of reconstruction.

As a general rule, I abstain from reading the reports of attacks upon myself, wishing not to be provoked by that to which I cannot properly offer an answer. In spite of this precaution, however, it comes to my knowledge that I am much censured from some supposed agency in setting up and seeking to sustain the new State government of Louisiana. In this I have done just so much and no more than the public knows. In the annual message of December, 1863, and accompanying proclamation, I presented a plan of reconstruction (as the phrase goes), which I promised, if adopted by any State, should be

acceptable to and sustained by the Executive Government of the nation. I distinctly stated that this was not the only plan which might possibly be acceptable; and I also distinctly protested that the Executive claimed no right to say when or whether members should be admitted to seats in Congress from such States. This plan was, in advance, submitted to the then Cabinet, and distinctly approved by every member of it. One of them suggested that I should then, and in that connection, apply the Emancipation Proclamation to the theretofore excepted parts of Virginia and Louisiana; that I should drop the suggestion about apprenticeship for freed people, and that I should omit the protest against my own power, in regard to the admission of members of Congress; but even he approved every part and parcel of the plan which has since been employed or touched by the action of Louisiana. The new Constitution of Louisiana, declaring emancipation for the whole State, practically applies the proclamation to the part previously excepted. It does not adopt apprenticeship for freed people, and it is silent, as it could not well be otherwise, about the admission of members to Congress. So that, as it applies to Louisiana, every member of the Cabinet fully approved the plan. The message went to Congress, and I received many commendations of the plan, written and verbal; and not a single objection to it, from any professed emancipationist, came to my knowledge, until after the news reached Washington that the people of Louisiana had begun to move in accordance with it. From about July, 1862, I had corresponded with different persons, supposed to be interested, seeking a reconstruction of a State government for Louisiana. When the message of 1863, with the plan before mentioned, reached New Orleans, General Banks wrote me that he was confident the people, with his military co-operation, would reconstruct substantially on that plan. I wrote him and some of them to try it. They tried it, and the result is known. Such only has been my agency in getting up the Louisiana government. As to sustaining it, my promise is out, as before stated. But, as bad promises are better broken than kept, I shall treat this as a bad promise, and break it, whenever I shall be convinced that keeping it is adverse to the public interest. But I have not yet been so convinced.

I have been shown a letter on this subject, supposed to be an able one, in which the writer expresses regret that my mind has not seemed to be definitely fixed on the question whether the seceded States, so called, are in the Union or out of it. It would, perhaps, add astonishment to his regret were he to learn that, since I have found professed Union men endeavoring to answer that question, I have purposely forbore any public expression upon it. It appears to me that question has not been, nor yet is, a practically material one, and that any discussion of it, while it thus remains practically immaterial, could have no effect other than the mischievous one of dividing our friends. As yet, whatever it may hereafter become, that question is bad, as the basis of a controversy, and good for nothing at all—a merely pernicious abstraction. We all agree that the seceded States, so called, are out of their proper practical relation with the Union, and that the sole object of the Government, civil and military, in regard to those States, is to again get them into that proper practical relation. I believe it is not only possible, but in fact easier to do this without deciding or even considering whether these States have ever been out of the Union, than with it. Finding themselves safely at home, it would be utterly immaterial whether they had ever been abroad. Let us all join in doing the acts necessary to restoring the proper practical relations between these States and the Union, and each forever after innocently indulge his own opinion whether, in doing the acts, he brought the States from without into the Union, or only gave them proper assistance, they never having been out of it.

The amount of constituency, so to speak, on which the new Louisiana Government rests, would be more satisfactory to all if it contained fifty, thirty, or even twenty thousand, instead of only about twelve thousand, as it does. It is also unsatisfactory to some that the elective franchise is not given to the colored man. I would myself prefer that it were now conferred on the very intelligent, and on those who serve our cause as soldiers. Still the question is not whether the Louisiana government, as it stands, is quite all that is desirable. The questions are: "Will it be wiser to take it as it is, and help to improve it, or to reject and disperse it?" "Can Louisiana be brought into proper practical relation with the Union sooner by sustaining or discarding her new State government?"

Some twelve thousand voters in the heretofore slave State of Louisiana have sworn allegiance to the Union, assumed to be the rightful political power of the State, held elections, organized a State government, adopted a free State constitution, giving the benefit of public schools equally to black and white, and empowering the Legislature to confer the elective franchise upon the colored man. Their Legislature has already voted to ratify the constitutional amendment, recently passed by Congress, abolishing slavery throughout the nation. These twelve thousand persons are thus fully committed to the Union, and to perpetual freedom in the State; committed to the very things and nearly all the things the nation wants, and they ask the nation's recognition and its assistance to make good their commitment. Now, if we reject and spurn them, we do our utmost to disorganize and disperse them. We, in effect, say to the white man, "You are worthless, or worse; we will neither help you, nor be helped by you." To the blacks we say, "This cup of liberty, which these, your old masters, hold to your lips, we will dash from you, and leave you to the chances of gathering the spilled and scattered contents, in some vague and undefined when, where, and how." If this course, discouraging and paralyzing both white and black, has any tendency to bring Louisiana into proper practical relations with the Union, I have, so far, been unable to perceive it. If, on the contrary, we recognize and sustain the new government of Louisiana, the converse of all this is made true. We encourage the hearts and nerve the arms of the twelve thousand to adhere to their work, and argue for it, and proselyte for it, and fight for it, and feed it, and grow it, and ripen it to a complete success. The colored man, too, in seeing all united for him, is inspired with vigilance, and energy, and daring to the same end. Grant that he desires the elective franchise, will he not attain it sooner by saving the already advanced steps toward it than by running backward over them? Concede that the new Government of Louisiana is only to what it should be as the egg is to the fowl, we shall sooner have the fowl by hatching the egg than by smashing it. (Laughter.) Again, if we reject Louisiana, we also reject one vote in favor of the proposed amendment to the national Constitution. To meet this proposition, it has been argued that no more than three-fourths of those States which have not attempted secession are necessary to validly ratify the amendment. I do not commit myself against this further than to say that such a ratification would be questionable, and sure to be persistently questioned; while a ratification by three-fourths of all the States would be unquestioned and unquestionable.

I repeat the question, "Can Louisiana be brought into proper practical relation with the Union sooner by sustaining or by discarding her new State Government?" What has been said of Louisiana will apply generally to other States. And yet so great peculiarities pertain to each State, and such important and sudden changes occur in the same State, and, withal, so new and unprecedented is the whole case, that no exclusive and inflexible plan can safely be

prescribed as to details and collaterals. Such an exclusive and inflexible plan would surely become a new entanglement. Important principles may and must be inflexible. In the present situation, as the phrase goes, it may be my duty to make some new announcement to the people of the South. I am considering, and shall not fail to act when satisfied that action will be proper.

At the same time proclamations were issued relative to closing the Southern ports, in which the Government claimed to exercise the same legal authority over them as over other ports of the United States, and also declaring that in future foreign cruisers would receive in ports of the United States the same treatment which in their ports was given to cruisers of the United States. About the same time, April 13th, an order was issued from the War Department, stopping all drafting and recruiting, curtailing the purchase of military stores, etc.

But the time was now close at hand when the duty of restoring the integrity of the country was to pass into other hands. On April 15th, Vice-President Johnson, then in Washington, received the following letter:

WASHINGTON CITY, D. C., April 15, 1865.

Sir: Abraham Lincoln, President of the United States, was shot by an assassin last evening at Ford's Theatre, in this city, and died at the hour of twenty-two minutes after seven o'clock this morning.

About the same time at which the President was shot an assassin entered the sick-chamber of the Hon. William H. Seward, Secretary of State, and stabbed him in several places—in the throat, neck, and face—severely if not mortally wounding him. Other members of the Secretary's family were dangerously wounded by the assassin while making his escape.

By the death of President Lincoln the office of President has devolved under the Constitution upon you. The emergency of the Government demands that you should immediately qualify according to the requirements of the Constitution, and enter upon the duties of President of the United States. If you will please make known your pleasure, such arrangements as you deem proper will be made.

Your obedient servants,

HUGH McCULLOCH, Sec. of the Treasury,

EDWIN M. STANTON, Sec. of War,

GIDEON WELLES, Sec. of the Navy,

W. DENNISON, Postmaster-General,

J. P. USHER, Sec. of the Interior,

JAMES SPEED, Attorney-General.

To Hon. Andrew Johnson, Vice-President of the United States.

Mr. Johnson, in answer, appointed 11 o'clock, A.M., at his rooms at the Kirkwood Hotel, as the time and place when he would take the oath of office. It was duly administered to him by Chief Justice Chase, in presence of the Cabinet and several members of Congress. He then said:

Gentlemen, I must be permitted to say that I have been almost overwhelmed by the announcement of the sad event which has so recently occurred. I feel incompetent to perform duties so important and responsible as those which have been so unexpectedly thrown upon me. As to an indication of any policy which may be pursued by me in the administration of the Government, I have to say that that must be left for development, as the administration progresses. The message or declaration must be made by the acts as they transpire. The only assurance that I can now give of the future, is by reference to the past. The course which I have taken in the past, in con-

nection with this rebellion, must be regarded as a guaranty for the future. My past public life, which has been long and laborious, has been founded, as I in good conscience believe, upon a great principle of right, which lies at the basis of all things. The best energies of my life have been spent in endeavoring to establish and perpetuate the blessings of free government; and I believe that the Government, in passing through its present trials, will settle down upon principles consonant with popular rights, more permanent and enduring than heretofore. I must be permitted to say, if I understood the feelings of my own heart, I have long labored to ameliorate and alleviate the condition of the great mass of the American people. Toil, and an honest advocacy of the great principles of free government, have been my lot. The duties have been mine—the consequences are God's. This has been the foundation of my political creed. I feel that in the end the Government will triumph, and that these great principles will be permanently established.

In conclusion, gentlemen, let me say that I want your encouragement and countenance. I shall ask, and rely, upon you and others, in carrying the Government through its present perils. I feel, in making this request, that it will be heartily responded to by you and all other patriots and lovers of the rights and interests of a free people.

Unparalleled as were the excitement and regret produced by this death, the details of which will be found elsewhere (*see* LINCOLN, ABRAHAM), the authority of the nation, without any formal parade or ceremony, was thus quietly transferred to other hands. The Cabinet of Mr. Lincoln continued unchanged through the year. Much interest was immediately awakened in the public mind to learn the views of the President on the state of the country, and the plan to be pursued in the restoration of the union of the States. Delegations of citizens from several States waited upon him and tendered their hearty support, to whom he said, in most explicit terms, that his past course must be an indication of what his future would be. To a delegation of citizens of New Hampshire he said:

I have now, as always an abiding faith in the ultimate triumph of justice and right, and I shall seek the inspiration and guidance of this faith, in the assured belief that the present struggle will result in the permanent establishment of our Government, and in making us a free, united, and happy people. This Government is now passing through a fiery, and, let us hope, its last ordeal—one that will test its powers of endurance, and will determine whether it can do what its enemies have denied—suppress and punish treason. This is the trial through which we are now passing, and, if we are true to ourselves and the principles upon which the Constitution was framed, who can doubt that the Government will settle down upon a more enduring basis than its best friends have dared to hope for it?

In entering upon the discharge of the grave duties before me, it has been suggested and even urged by friends whose good opinions I value, and whose judgment I respect, that I shall foreshadow the policy that would guide me, in some formal, public manifesto. But who could have foretold the events of the past four years? Who was wise enough to indicate beforehand a line of policy adapted to all the changing emergencies of that period? It is not in the wisdom and foresight of man to prescribe a course of action in advance for such disturbed and perilous conditions as now distract public affairs. I believe I may say that my past life is known to the country.

Amos

Andrew Johnson

PRESIDENT OF THE UNITED STATES

especially that part connected with the rebellion. The country must accept, then, my past course as an indication of what my future will be. I think the people understand and appreciate my position.

I know it is easy, gentlemen, for any one who is so disposed, to acquire a reputation for clemency and mercy. But the public good imperatively requires a just discrimination in the exercise of these qualities. What is clemency? What is mercy? It may be considered merciful to relieve an individual from pain and suffering; but to relieve one from the penalty of crime may be productive of national disaster. The American people must be taught to know and understand that treason is a crime. Arson and murder are crimes, the punishment of which is the loss of liberty and life. If, then, it is right in the sight of God to take away human life for such crimes, what punishment, let me ask you, should be inflicted upon him who is guilty of the atrocious crime of assassinating the Chief Magistrate of a great people? I am sure there is no one present who has not the answer ready upon his lips! Him whom we loved has been removed from our midst by the hand of a ruthless assassin, and his blessed spirit has gone to that bourne whence no traveller returns. If his murderer should suffer the severest penalty known to the law, what punishment should be inflicted upon the assassins who have raised their daggers against the life of a nation, against the happiness and lives of thirty millions of people? Treason is a crime, and must be punished as a crime. It must not be regarded as a mere difference of political opinion. It must not be excused as an unsuccessful rebellion, to be overlooked and forgiven. It is a crime before which all other crimes sink into insignificance; and in saying this it must not be considered that I am influenced by angry or revengeful feelings.

Of course, a careful discrimination must be observed, for thousands have been involved in this rebellion who are only technically guilty of the crime of treason. They have been deluded and deceived, and have been made the victims of the more intelligent, artful, and designing men, the instigators of this monstrous rebellion. The number of this latter class is comparatively small. The former may stand acquitted of the crime of treason—the latter never; the full penalty of their crimes should be visited upon them. To the others I would accord amnesty, leniency, and mercy.

To the address of a delegation from Indiana, on April 21st, he replied in part as follows:

As to making a declaration, or manifesto, or message, or what you may please to call it, my past is a better foreshadowing of my future course than any statement on paper that might be made. Who, four years ago, looking down the stream of time, could have delineated that which has transpired since then? Had any one done so, and presented it, he would have been looked upon as insane; or it would have been thought a fable fabulous as the stories of the Arabian Nights—as the wonders of the lamp of Aladdin—and would have been about as readily believed. If we knew so little four years ago of what has passed since then, we know as little what events will arise in the next four years. But as these events arise I shall be controlled in the disposition of them by those rules and principles by which I have been guided heretofore. * * * * * When we come to understand our system of government, though it be complex, we see how beautifully one part acts in harmony with another. Then we see our Government is to be a perpetuity, there being no provision for pulling it down, the Union being its vitalizing power, imparting life to the whole of the States, that move around it like planets around the sun, receiving thence light, and heat, and motion.

Upon this idea of destroying States my position has been heretofore well known, and I see no cause to change it now; and I am glad to hear its reitera-

tion on the present occasion. Some are satisfied with the idea that States are to be lost in territorial and other divisions—are to lose their character as States. But their life-breath has only been suspended, and it is a high constitutional obligation we have to secure each of these States in the possession and enjoyment of a republican form of Government. A State may be in the Government with a peculiar institution, and by the operation of rebellion lose that feature. But it was a State when it went into rebellion, and when it comes out without the institution it is still a State. I hold it as a solemn obligation in any one of these States where the rebel armies have been driven back or expelled—I care not how small the number of Union men, if enough to man the ship of State—I hold it, I say, a high duty to protect and secure to them a republican form of government. This is no new opinion. It is expressed in conformity with my understanding of the genius and theory of our Government. Then, in adjusting and putting the Government upon its legs again, I think the progress of this work must pass into the hands of its friends. If a State is to be nursed until it again gets strength, it must be nursed by its friends, and not smothered by its enemies. Now, permit me to remark that, while I have opposed dissolution and disintegration on the one hand, on the other I have opposed consolidation—or the centralization of power in the hands of a few. Sir, all this has been extorted from me by the remarks you have offered.

To a delegation from Ohio, on the same day, he said:

Gentlemen, all I can say and all I can promise you after referring to my past life is, that in ascertaining what my future will be, in the discharge of my duties in the administration of the Government, all will be done in a proper spirit, I think, and in accordance with my best ability.

To a delegation represented to be for the most part exiles from the South, on April 24th, he said:

The most that I can say is that, entering upon the duties that have devolved upon me under circumstances that are perilous and responsible, and being thrown into the position I now occupy unexpectedly, in consequence of the sad event, the heinous assassination which has taken place—in view of all that is before me and the circumstances that surround me—I cannot but feel that your encouragement and kindness are peculiarly acceptable and appropriate. I do not think you, who have been familiar with my course—you who are from the South, deem it necessary for me to make any professions as to the future on this occasion, nor to express what my course will be upon questions that may arise. If my past life is no indication of what my future will be, my professions were both worthless and empty; and in returning you my sincere thanks for this encouragement and sympathy, I can only reiterate what I have said before, and, in part, what has just been read.

To a delegation of colored persons, who some days previous had waited upon him, and among other things said: "The colored American asks but two things. He asks, after proving his devotion to his country by responding to her call in the hour of her sorest trial, and after demonstrating, upon many hotly-contested battle-fields, his manhood and valor, that he have, first, complete emancipation, and secondly, full equality before American law. Your past history, as connected with the rebellion, gives us full assurance that in your hands our cause shall receive no detriment, and

that our liberty and rights will be fully protected and sustained"—he replied:

I need not state to you my past history. It is well understood by you. In it you will find the guaranty of my future conduct toward your people. Where the colored people know me best, they have confidence in me. No man can charge me with having proved false to the promises I have made to any class of the people in my public life. I fear that leading colored men do not understand and appreciate the fact that they have friends on the south side of the line. They have, and they are as faithful and staunch as any north of the line. It may be a very easy thing, indeed popular, to be an emancipationist north of the line, but a very different thing to be such south of it. South of it, it costs a man effort, property, and perhaps life. You may express these sentiments, together with my thanks, to the people whom you represent.

These extracts present the general views uttered at this time by the President in his replies to the addresses of delegations. Still later, on June 24th, to a delegation from South Carolina he said:

From the Magna Charta we had derived our ideas of freedom of speech, liberty of the press, and unreasonable searches, and that private property should not be taken for public uses without just compensation. He had these notions fixed in his mind, and was therefore opposed to class legislation. Being providentially brought to his present position, he intended to exert the power and influence of the Government so as to place in power the popular heart of this nation. He proceeded on the principle that the great masses are not the mushroom upon a stump which wet weather supplies. He believed that this nation was sent on a great mission to afford an example of freedom and substantial happiness to all the powers of the earth.

The Constitution of the United States, in speaking of persons to be chosen as representatives in Congress, says, that the electors, in each State, shall have the qualifications requisite for electors of the most numerous branch of the State Legislature. Here we find a resting-place. This was the point at which the rebellion commenced. All the States were in the Union, moving in harmony, but a portion of them rebelled, and, to some extent, suspended and paralyzed the operations of their Government. There is a constitutional obligation resting upon the United States Government to put down rebellion, suppress insurrection, and repel invasion.

The slaves went into the war as slaves, and came out free men of color. The friction of the rebellion has rubbed out the nature and character of slavery. The loyal men who were compelled to bow and submit to the rebellion, should, now that the rebellion is ended, stand equal to loyal men everywhere. Hence the wish of reconstruction, and the trying to get back the State, to the point at which they formerly moved in perfect harmony.

He did not intend to serve any particular clique or interests. He would say to the delegation that slavery is gone as an institution. There was no hope that the people of South Carolina would be admitted into the Senate or House of Representatives until they had afforded evidence, by their conduct, of this truth. The policy, now that the rebellion is suppressed, is not to restore the State government through military rule, but by the people.

Meanwhile many steps were taken for the adjustment of affairs. The orders relative to a reduction of the army, will be found under **ARMY OPERATIONS**. The orders opening the Southern ports to trade, are stated under **COMMERCIAL INTERCOURSE**. By a proclamation of

President Johnson, under date of April 24th, the 1st of June was observed as a day of humiliation on account of the death of President Lincoln. The following is an extract:

Therefore, in order to mitigate that grief on earth, which can only be assuaged by communion with Our Father in Heaven, and in compliance with the wishes of Senators and Representatives in Congress communicated to me by resolution adopted at the National Capitol:

I, Andrew Johnson, President of the United States, do hereby appoint Thursday, the 25th day of May next,* to be observed wherever the United States flag may be respected, as a day of humiliation and mourning, and recommend my fellow-citizens there to assemble in their respective places of worship, there to unite in solemn services to Almighty God, in memory of the good man who has been removed, so that all shall be occupied at the same time in contemplation of his virtues, and sorrow for his sudden and violent end.

On the 2d of May, President Johnson issued another proclamation, offering a reward for certain persons, as follows:

Whereas, it appears from evidence in the bureau of Military Justice, that the atrocious murder of the late President, Abraham Lincoln, and the attempted assassination of the Hon. W. H. Seward, Secretary of State, were incited, concerted, and procured by and between Jefferson Davis, late of Richmond, Va., and Jacob Thompson, Clement C. Clay, Beverly Tucker, George N. Saunders, W. C. Cleary, and other rebels and traitors against the Government of the United States, harbored in Canada:

Now, therefore, to the end that justice may be done, I, Andrew Johnson, President of the United States, do offer and promise for the arrest of said persons or either of them, within the limits of the United States, so that they can be brought to trial, the following rewards: \$100,000 for the arrest of Jefferson Davis, \$25,000 for the arrest of Jacob Thompson, late of Mississippi, \$25,000 for the arrest of George N. Saunders, \$25,000 for the arrest of Beverly Tucker, and \$10,000 for the arrest of William C. Cleary, late clerk of Clement C. Clay. The Provost Marshal General of the United States is directed to cause a description of said persons with notice of the above rewards to be published.

On May 9th, another proclamation was issued, declaring that the United States would refuse hospitality to such nations as gave hospitality to Confederate cruisers or their officers and men, after a reasonable time shall have elapsed for the proclamation to become known.

On June 22d, the order requiring passports from all travellers entering the United States, was rescinded.

On May 29th, the President issued his proclamation stating the terms by which the people of the Southern States could be restored to their civil rights as citizens of the United States, thus:

Whereas, The President of the United States, on the 8th day of December, A. D. eighteen hundred and sixty-three, and on the 26th day of March, A. D. eighteen hundred and sixty-four, did, with the object to suppress the existing rebellion, to induce all persons to return to their loyalty, and to restore the authority of the United States, issue proclamations offering amnesty and pardon to certain persons who had directly or by implication participated in the said rebellion; and

* Subsequently changed to June 1st, because the 25th was "sacred to a large number of Christians as one of rejoicing for the ascension of our Saviour."

Whereas, Many persons who had so engaged in said rebellion have, since the issuance of said proclamations, failed or neglected to take the benefits offered thereby; and

Whereas, Many persons who have been justly deprived of all claim to amnesty and pardon thereunder, by reason of their participation directly or by implication in said rebellion, and continued in hostility to the Government of the United States since the date of said proclamation, now desire to apply for and obtain amnesty and pardon:

To the end, therefore, that the authority of the Government of the United States may be restored, and that peace, order, and freedom may be reestablished, I, Andrew Johnson, President of the United States, do proclaim and declare that I hereby grant to all persons who have directly or indirectly participated in the existing rebellion, except as hereinafter excepted, amnesty and pardon, with restoration of all rights of property, except as to slaves, and except in cases where legal proceedings under the laws of the United States providing for the confiscation of property of persons engaged in rebellion have been instituted; but on the condition, nevertheless, that every such person shall take and subscribe the following oath or affirmation, and thenceforward keep and maintain said oath inviolate, and which oath shall be registered for permanent preservation, and shall be of the tenor and effect following, to wit:

I, _____, do solemnly swear, or affirm, in presence of Almighty God, that I will henceforth faithfully support and defend the Constitution of the United States and the Union of the States thereunder, and that I will, in like manner, abide by and faithfully support all laws and proclamations which have been made during the existing rebellion with reference to the emancipation of slaves, so help me God.

The following classes of persons are excepted from the benefits of this proclamation:

1. All who are or shall have been pretended civil or diplomatic officers, or otherwise domestic or foreign agents, of the pretended Confederate Government.

2. All who left judicial stations under the United States to aid the rebellion.

3. All who shall have been military or naval officers of said pretended Confederate Government above the rank of colonel in the army or lieutenant in the navy.

4. All who left seats in the Congress of the United States to aid the rebellion.

5. All who resigned or tendered resignations of their commissions in the army or navy of the United States to evade duty in resisting the rebellion.

6. All who have engaged in any way in treating otherwise than lawfully as prisoners of war persons found in the United States service as officers, soldiers, seamen, or in other capacities.

7. All persons who have been or are absentees from the United States for the purpose of aiding the rebellion.

8. All military and naval officers in the rebel service who were educated by the Government in the Military Academy at West Point or the United States Naval Academy.

9. All persons who held the pretended offices of Governors of States in insurrection against the United States.

10. All persons who left their homes within the jurisdiction and protection of the United States, and passed beyond the Federal military lines into the so-called Confederate States, for the purpose of aiding the rebellion.

11. All persons who have been engaged in the destruction of the commerce of the United States upon the high seas, and all persons who have made raids into the United States from Canada, or been engaged in destroying the commerce of the United States upon the lakes and rivers that separate the British Provinces from the United States.

12. All persons who, at the time when they seek to

obtain the benefits hereof by taking the oath herein prescribed, are in military, naval, or civil confinement or custody, or under bonds of the civil, military, or naval authorities or agents of the United States as prisoners of war, or persons detained for offences of any kind either before or after conviction.

13. All persons who have voluntarily participated in said rebellion, and the estimated value of whose taxable property is over twenty thousand dollars.

14. All persons who have taken the oath of amnesty as prescribed in the President's proclamation of December 8, A. D. 1863, or an oath of allegiance to the Government of the United States since the date of said proclamation, and who have not thenceforward kept and maintained the same inviolate—provided, that special application may be made to the President for pardon by any person belonging to the excepted classes, and such clemency will be liberally extended as may be consistent with the facts of the case and the peace and dignity of the United States.

The Secretary of State will establish rules and regulations for administering and recording the said amnesty oath, so as to insure its benefit to the people, and guard the Government against fraud.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, the twenty-ninth day of May, in the year of our Lord one thousand eight hundred and sixty-five, and of the independence of the United States the eighty-ninth.

ANDREW JOHNSON.

At the same time an order issued from the State Department saying that the oath prescribed in the proclamation might be taken and subscribed before any commissioned officer, civil, military, or naval, in the service of the United States, or any military or civil officer of a loyal State or Territory, who, by the laws thereof, might be qualified for administering oaths. All officers who received such oaths were authorized to give certified copies thereof to persons respectively by whom they were made, and such officers were required to transmit the original to the department where they were deposited. A register thereof is kept in the department, and on application, in proper cases, certificates are issued of such records in the customary form of official certificates. Refusing entirely to recognize the authority of any person holding a civil office in the States while at war against the Federal Government, President Johnson subsequently appointed Provisional Governors for the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, and Texas, with authority to assemble in the State delegates elected by the people who had taken the amnesty oath, or who had opposed secession, in convention, and amend and alter the State constitution, reappoint or designate local officers, and secure the election of State officers and a Legislature and members of Congress under the amended constitutions. If this reorganization was sustained and approved by the mass of the people, the State civil government became established in unison with the Federal Union. If it was not so sustained, a military force was at hand to lend the necessary support. Such was the plan of the President. It was peacefully acquiesced in by the inhabitants of those States, as stated in other pages of this volume. For

the States of Virginia, Tennessee, Arkansas, and Louisiana, no Provisional Governors were appointed. The measures taken for their reorganization, during President Lincoln's administration, were regarded by his successor as having placed those States *rectus in curia*. Under these measures, together with numerous pardons by the President, the social and commercial relations between the people of the Northern and Southern States were brought to great harmony in a few months. In a word, the President approved of the restoration of the Southern States into their former position in the Union without any surrender of their constitutional rights of local self-government, and without requiring them, with respect to the blacks, to do any thing more than to acknowledge and respect the freedom which has resulted from the exercise of force during a condition of civil war. At the same time the civil authority was required to be in the hands of men who could take and would observe the amnesty oath, or who had been steadfast Unionists.

But it was soon apparent that a portion of the people were not satisfied with the course of affairs. The first objections were raised against the terms given by Gen. Grant to Lee's army, as being too lenient. The Secretary of War, Stanton, therefore required of Attorney-General Speed an opinion whether the officers of the Confederate army who once resided in Washington and went South and took service, could return under the stipulations of the capitulation and reside at Washington as their home; or other persons who went from Washington to the South and gave support, comfort, and aid to the cause of the enemy; and whether the wearing of Confederate uniforms in public in the Northern States since the capitulation was not a fresh act of hostility. In reply, the Attorney-General considered that the President performed two functions, one civil and the other military. As civil head, he possessed the pardoning power; as Commander-in-chief of the armies, he is the head of its belligerent power. His power to pardon as a civil magistrate cannot be delegated. As commander he can delegate power. Gen. Grant is to be regarded purely as a military officer; he spoke as one possessing no power except belligerent, which was well known to the belligerents with whom he was making the stipulation. The question is if permissions thus to reside have been granted. In the prize cases in 2d Black, the Confederates were decided to be belligerents; and persons in their territory must be treated as enemies, including those who went or remained there after hostilities commenced. "It follows as a matter of course, that residents of the territory in rebellion cannot be regarded as having homes in the loyal States. A man's home and his residence cannot be distinct the one from the other. The rebels were dealt with by Gen. Grant as belligerents. As belligerents, their homes were of necessity in the territory belligerent to the Government of the United States.

The officers and soldiers of Gen. Lee's army, then, who had homes, prior to the rebellion, in the Northern States, took up their residences within the rebel States, and abandoned their homes in the loyal States; and when Gen. Grant gave permission to them, by the stipulation, to return to their homes, it cannot be understood as a permission to return to any part of the loyal States."

Only the officers and soldiers of Lee's army were included in the stipulation, and not civilians. As to the third point, the Attorney-General said it was answered in the first, and added, "It seems to me that such officers, having done wrong in coming into the loyal States, are but adding insult to injury in wearing their uniforms. They have as much right to bear the traitors' flag through the streets of a loyal city as to wear a traitor's garb."

Notwithstanding this opinion of the Attorney-General, the sentiment of the people required that the solemn agreement, which was supposed by all the parties assenting to it, to be binding upon the civil as well as military authorities, should not be repudiated, and it was observed by the President.

It was still further thought that the opportunity should be improved to secure to the emancipated negroes an equality of civil and political rights with the whites. At a public meeting held in Faneuil Hall, Boston, in June, a committee was appointed to consider the proper course to be pursued with regard to the Southern States, and prepare an address to the public. This committee say:

Let us now, fellow-citizens, turn our attention to our rights and duties. Having succeeded in this war, and holding the rebel States in our military occupation, it is our right and duty to secure whatever the public safety and the public faith require.

1. The principle must be put beyond all question, that the Republic has a direct claim upon the allegiance of every citizen, from which no State can absolve him, and to his obedience to the laws of the Republic, any thing in the Constitution or laws of any State to the contrary notwithstanding.

2. The public faith is pledged to every person of color in the rebel States, to secure to them and their posterity forever a complete and veritable freedom. Having promised them this freedom, received their aid on the faith of this promise, and, by a successful war and actual military occupation of the country, having obtained the power to secure the result, we are dishonored if we fail to make it good to them.

3. The system of slavery must be abolished and prohibited by a paramount and irreversible law. Throughout the rebel States there must be, in the words of Webster, "impressed upon the soil itself an inability to bear up any but free men."

4. The systems of the States must be truly "republican."

Unless these points are secured, the public faith will be no safety for the public peace or the preservation of our institutions.

The objects to be secured were more precisely stated by the President of the New England Anti-slavery Society, Mr. Phillips, at the annual convention on May 31st. He said:

The real topic for discussion was immediate suffrage for the negro. There was no time to agitate this

question. Discussion before the people would not secure colored suffrage for twenty-five years. The right must be conceded at once to secure the nation from serious trouble and perhaps disaster. The condition of every black man was to-day no better than in 1833, and he did not see how any man could say slavery was abolished and give up his efforts in the antislavery cause. No man could say whether he could own property, protect his wife, testify in court, or exercise any other natural right. The white men of each State claimed the privilege to regulate all this, and the Tennessee Legislature had just enacted a law concerning free colored people. Do they enact laws regarding free white people? All that concerns the colored people is to be regulated by the whites, and what will the whites do when their States are reconstructed without the negro franchise? They would unite with the old Democratic party in the last Congress of Johnson's presidency, and show the friends of liberty who it is that has really been whipped in this last hour of the war.

The views thus expressed met with a response in various parts of the Northern States, particularly those portions on the outer verge of the country. No political bodies during the year expressed dissent to the measures of reconstruction. On the contrary, conventions of both political parties approved of them; but the Republican conventions, at the same time, adopted resolutions demanding "equal and exact justice" for all. It will be seen, by reference to the reorganization proceedings in the respective Southern States, that not only was the emancipation of the slaves within their borders ratified, and measures to secure to them the rights of property, personal freedom, and legal protection adopted, but they were required to declare null and void the ordinances of secession, to repudiate the State debts contracted to carry on the war, and to adopt the amendment of the Federal Constitution respecting slavery. Those who expressed a desire for more concessions on the part of the Southern States, asked for suffrage and eligibility to office for the freedmen; a few wished for a general confiscation of property and a distribution among the negroes, and a general system of free schools for them. But these views were not approved by the President.

The views of the President later in the year were very frankly expressed to a delegation of some fifty or sixty persons from the Southern States, on September 11th. The delegation was presented to President Johnson by Mr. McFarland, of Virginia, who said:

MR. PRESIDENT: The gentlemen accompanying me, and whom I have the honor of introducing to you, constitute a number of the most respectable citizens of nine of the Southern States. They come, sir, for the purpose of manifesting the sincere respect and regard they entertain for you, and to express their sincere determination to coöperate with you in whatever shall tend to promote the interests and welfare of our common country, and to say that they are as earnest now and faithful to their allegiance to the United States and to the Constitution of the Union as in the past, and that they have great confidence in your wisdom to heal the wounds that have been made, and in your disposition to exercise all the leniency which can be commended by a sound and judicious policy. That they are assured, in doing this, of your desire and intention to sustain and

maintain Southern rights in the Union of the United States.

The President, evidently surprised at the imposing appearance of the delegation, with much feeling said:

GENTLEMEN: I can only say, in reply to the remarks of your chairman, that I am highly gratified to receive the assurances he has given me. They are more than I could have expected under the circumstances. I must say I was unprepared to receive so numerous a delegation on this occasion; it was unexpected; I had no idea it was to be so large or represent so many States. When I expressed, as I did, my willingness to see at any time so many of you as chose to do me the honor to call upon me, and stated that I should be gratified at receiving any manifestations of regard you might think proper to make, I was totally unprepared for any thing equal to the present demonstration. I am free to say it excites in my mind feelings and emotions that language is totally inadequate to express. When I look back upon my past actions, and recall a period scarcely more than four short years ago, when I stood battling for principles which many of you opposed and thought were wrong, I was battling for the same principles that actuate me to-day, and which principles, I thank my God, you have come forward on this occasion to manifest a disposition to support. I say now, as I have said on many former occasions, that I entertain no personal resentments, enmities, or animosities, to any living soul south of Mason and Dixon's line, however much he may have differed from me in principle. The stand I then took I claim to have been the only true one. I remember how I stood pleading with my Southern brethren when they stood with their hats in their hands ready to turn their backs upon the United States; how I implored them to stand with me there and maintain our rights and fight our battles under the laws and Constitution of the United States. I think now, as I thought then, and endeavored to induce them to believe, that our true position was under the law and under the Constitution of the Union, with the institution of slavery in it; but if that principle made an issue that rendered a disintegration possible—if that made an issue which should prevent us from transmitting to our children a country as bequeathed to us by our fathers—I had nothing else to do but stand by the Government, be the consequences what they might; I said then, what you all know, that I was for the institutions of the country as guaranteed by the Constitution, but above all things I was for the Union of the States. I remember the taunts, the jeers, the scowls, with which I was treated. I remember the circle that stood around me, and remember the threats and intimidations that were freely uttered by the men who opposed me, and whom I wanted to befriend and guide by the light that led me; but feeling conscious in my own integrity, and that I was right, I heeded not what they might say or do to me, and was inspired and encouraged to do my duty regardless of aught else, and have lived to see the realization of my predictions and the fatal error of those whom I vainly essayed to save from the results I could not but foresee. Gentlemen, we have passed through this rebellion. I say we, for it is we who are responsible for it. Yes, the South made the issue, and I know the nature of the Southern people well enough to know that when they have become convinced of an error they frankly acknowledge it, in a manly, open, direct manner; and now, in the performance of that duty, or, indeed, in any act they undertake to perform, they do it heartily and frankly; and now that they come to me, I understand them as saying that—"We made the issue. We set up the Union of the States against the institution of slavery; we selected as arbitrator the God of battles; the arbitrament was the sword. The issue was fairly and honorably met. Both the

questions presented have been settled against us, and we are prepared to accept the issue." I find on all sides this spirit of candor and honor prevailing. It is said by all. The issue was ours, and the judgment has been given against us; and the decision having been made against us, we feel bound in honor to abide by the arbitrament. In doing this we are doing ourselves no dishonor, and should not feel humiliated or degraded, but rather that we are ennobling ourselves by our action; and we should feel that the Government has treated us magnanimously, and meet the Government upon the terms it has so magnanimously proffered us. So far as I am concerned, personally, I am uninfluenced by any question, whether it affects the North or the South, the East or the West. I stand where I did of old, battling for the Constitution and the Union of these United States. In doing so, I know I opposed some of you gentlemen of the South, when this doctrine of secession was being urged upon the country, and the declaration of your right to break up the Government and disintegrate the Union was made. I stand to-day, as I ever stood, firmly in the opinion that if a monopoly contends against this country the monopoly must go down, and the country must go up. Yes, the issue was made by the South against the Government, and the Government has triumphed; and the South, true to her ancient instincts of frankness and manly honor, comes forth and expresses her willingness to abide the result of the decision in good faith. While I think that the rebellion has been arrested and subdued, and am happy in the consciousness of a duty well performed, I want not only you, but the people of the world to know, that while I dreaded and feared disintegration of the States, I am equally opposed to consolidation or concentration of power here, under whatever guise or name; and if the issue is forced upon us, I shall still endeavor to pursue the same efforts to dissuade from this doctrine of running to extremes. But I say let the same rules be applied. Let the Constitution be our guide. Let the preservation of that and the Union of the States be our principal aim. Let it be our hope that the Government may be perpetual, and that the principles of the Government, founded as they are on right and justice, may be handed down without spot or blemish to our posterity.

As I have before remarked to you, I am gratified to see so many of you here to-day. It manifests a spirit I am pleased to observe. I know it has been said of me that my asperities are sharp, that I had vindictive feelings to gratify, and that I should not fail to avail myself of the opportunities that would present themselves to gratify such despicable feelings. Gentlemen, if my acts will not speak for me and for themselves, then any professions I might now make would be equally useless. But, gentlemen, if I know myself, as I think I do, I know that I am of the Southern people, and I love them and will do all in my power to restore them to that state of happiness and prosperity which they enjoyed before the madness of misguided men, in whom they had reposed their confidence, led them astray to their own undoing. If there is any thing that can be done on my part, on correct principles, on the principles of the Constitution, to promote these ends, be assured it shall be done. Let me assure you, also, that there is no disposition on the part of the Government to deal harshly with the Southern people. There may be speeches published from various quarters that may breathe a different spirit. Do not let them trouble or excite you, but believe that it is, as it is, the great object of the Government to make the union of these United States more complete and perfect than ever, and to maintain it on constitutional principles, if possible, more firmly than it has ever before been. Then why cannot we all come up to the work in a proper spirit? In other words, let us look to the Constitution. The issue has been made and

decided; then, as wise men—as men who see right and are determined to follow it, as fathers and brothers, and as men who love their country in this hour of trial and suffering—why cannot we come up and help to settle the questions of the hour and adjust them according to the principles of honor and of justice? The institution of slavery is gone. The former status of the negro had to be changed, and we, as wise men, must recognize so patent a fact, and adapt ourselves to circumstances as they surround us. I believe when your faith is pledged, when your consent has been given, as I have already said, I believe it will be maintained in good faith, and every pledge or promise fully carried out. All I ask or desire of the South or the North, the East or the West, is to be sustained in carrying out the principles of the Constitution. It is not to be denied that we have been sufferers on both sides. Good men have fallen on both sides, and much misery is being endured as the necessary result of so gigantic a contest. Why, then, cannot we come together, and around the common altar of our country heal the wounds that have been made? Deep wounds have been inflicted. Our country has been scarred all over. Then why cannot we approach each other upon principles which are right in themselves, and which will be productive of good to all? The day is not distant when we shall feel like some family that have had a deep and desperate feud, the various members of which have come together and compared the evils and sufferings they had inflicted upon each other. They had seen the influence of their error and its results, and, governed by a generous spirit of conciliation, they had become mutually forbearing and forgiving, and returned to their old habits of fraternal kindness, and become better friends than ever. Then let us consider that the feud which alienated us has been settled and adjusted to our mutual satisfaction, and that we come together to be bound by firmer bonds of love, respect, and confidence than ever. The North cannot get along without the South, nor the South from the North, the East from the West, nor the West from the East; and I say it is our duty to do all that in our power lies to perpetuate and make stronger the bonds of our Union, seeing that it is for the common good of all that we should be united. I feel this Union, though but the creation of a century, is to be perpetuated for all time, and that it cannot be destroyed except by the all-wise God who created it. Gentlemen, I repeat I sincerely thank you for the respect manifested on this occasion; and for the expressions of approbation and confidence please accept my sincere thanks.

Mr. McFarland rejoined:

MR. PRESIDENT: On behalf of this delegation I return you my sincere thanks for your kind, generous—ay, magnanimous expressions of kindly feeling toward the people of the South.

The more prominent persons engaged in the war against the Union, who were in confinement, were from time to time released on their parole by the order of the President. On October 11th he issued a proclamation declaring that, as the authority of the Federal Government was sufficiently restored in the Southern States to admit of the enlargement from close custody of John A. Campbell, of Alabama; John H. Reagan, of Texas; Alexander H. Stephens, of Georgia; George A. Trenholm, of South Carolina, and Charles Clark, of Mississippi; they should be released on giving their respective paroles to appear at such time and place as the President might designate, to answer any charge that he might direct to be preferred against them, and also that they will

respectively abide until further orders, in the States designated, and not depart therefrom.

The views of the President relative to the African race were very fully expressed on October 10th to the 1st colored regiment of the District of Columbia. After thanking them for the service they had rendered the country, and stating that the question of slavery had been settled by the war, he said:

But this is not all, and as you have paid me the compliment to call upon me, I shall take the privilege of saying one or two words as I am before you. I repeat that it is not all. Now when the sword is returned to its scabbard; when your arms are reversed and the olive-branch of peace is extended, as I remarked before, resentment and revenge should subside. Then what is to follow? You do understand, no doubt, and if you do not, you cannot understand too soon, that simple liberty does not mean the privilege of going into the battle-field or into the service of the country as a soldier. It means other things as well. And now when you have laid down your arms there are other objects of equal importance before you. Now that the Government has triumphantly passed through this mighty rebellion, after the most gigantic battles the world ever saw, the problem is before you, and it is best that you should understand it; and therefore I speak simply and plainly. Will you now, when you have returned from the army of the United States and taken the position of the citizen, when you have returned to the avocations of peace, will you give evidence to the world that you are capable and competent to govern yourselves? That is what you will have to do. Liberty is not a mere idea, a mere vagary. It is an idea or it is a reality; and when you come to examine this question of liberty you will not be mistaken in a mere idea for the reality. It does not consist in idleness. Liberty does not consist in being worthless. Liberty does not consist in doing all things as we please; and there can be no liberty without law. In a government of freedom and of liberty there must be law, and there must be obedience and submission to the law without regard to color. Liberty (and may I not call you my countrymen?), liberty consists in the glorious privilege of work; of pursuing the ordinary avocations of peace with industry and with economy; and that being done, all those who have been industrious and economical are permitted to appropriate and enjoy the products of their own labor. This is one of the great blessings of freedom; and hence we might ask the question, and answer it by stating that liberty means freedom to work and enjoy the products of your own labor. You will soon be mustered out of the ranks. It is for you to establish the great fact that you are fit and qualified to be free. Hence freedom is not a mere idea, but is something that exists in fact. Freedom is not simply the privilege to live in idleness; liberty does not mean simply to resort to the low saloons and other places of disreputable character. Freedom and liberty do not mean that the people ought to live in licentiousness; but liberty means simply to be industrious, to be virtuous, to be upright in all our dealings and relations with men; and to those now before me, members of the 1st regiment of colored volunteers from the District of Columbia and the capital of the United States, I have to say that a great deal depends upon yourselves. You must give evidence that you are competent for the rights that the Government has guaranteed to you. Henceforth each and all of you must be measured according to your merit. If one man is more meritorious than another they cannot be equals; and he is the most exalted that is the most meritorious, without regard to color. And the idea of having a law passed in the morning that will make a white man a black man before night, and a black man

a white man before day, is absurd. That is not the standard. It is your own conduct; it is your own merit; it is the development of your own talents and of your own intellectuality and moral qualities. Let this, then, be your course. Adopt a system of morality, abstain from all licentiousness. And let me say one thing here, for I am going to talk plain. I have lived in a Southern State all my life, and know what has too often been the case. There is one thing you should esteem higher and more supreme than almost all others, and that is the solemn contract, with all the penalties, in the association of married life. Men and women should abstain from those actions or habits that too frequently follow a war. Inculcate among your children and among your associations, notwithstanding you are just back from the army of the United States, that virtue, that merit, that intelligence are the standards to be observed, and those which you are determined to maintain during your future lives. This is the way to make white men black and black men white. He that is most meritorious, and virtuous, and intellectual, and well informed, must stand highest, without regard to color. It is the very basis upon which Heaven rests itself. Each individual takes his degree in the sublimer and more exalted regions in proportion to his merits and his virtue. Then I shall say to you on this occasion, in returning to your homes and firesides, after feeling conscious and proud of having faithfully discharged your duty—returning with the determination that you will perform your duty in the future as you have in the past—abstain from all those bickerings, and jealousies, and revengeful feelings, which too often spring up between different races. There is a great problem before us, and I may as well allude to it here in this connection, and that is, whether this race can be incorporated and mixed with the people of the United States, to be made a harmonious and permanent ingredient in the population. This is a problem not yet settled; but we are in the right line to do so. Slavery raised its head against the Government, and the Government raised its strong arm and struck it to the ground. So that part of the problem is settled; the institution of slavery is overthrown. But another part remains to be solved, and that is, can four millions of people, raised as they have been with all the prejudices of the whites, can they take their places in the community and made to work harmoniously and congruously in our system? This is a problem to be considered. Are the digestive powers of the American Government sufficient to receive this element in a new shape and digest it and make it work healthfully upon the system that has incorporated it? This is the question to be determined. Let us make the experiment, and make it in good faith. If that cannot be done there is another problem that is before us. If we have to become a separate and distinct people (although I trust that the system can be made to work harmoniously and that the great problem will be settled without going any further), if it should be so that the two races cannot agree and live in peace and prosperity, and the laws of Providence require that they should be separated—in that event, looking to the far distant future and trusting that it may never come—if it should come, Providence, that works mysteriously, but unerringly and certainly, will point out the way, and the mode, and the manner by which these people are to be separated, and they are to be taken to their lands of inheritance and promise; for such a one is before them. Hence we are making the experiment. Hence let me impress upon you the importance of controlling your passions, developing your intellect, and of applying your physical powers to the industrial interests of the country; and that is the true process by which this question can be settled. Be patient, persevering, and forbearing, and you will help to solve the problem. Make for yourselves a reputation in this cause as you have won for yourselves a reputation in the cause in which you have been en-

gaged. In speaking to the members of this regiment I want them to understand that, so far as I am concerned, I do not assume or pretend that I am stronger than the laws—of course, of nature—or that I am wiser than Providence itself. It is our duty to try and discover what those great laws are which are at the foundation of all things, and, having discovered what they are, conform our actions and our conduct to them, and to the will of God, who ruleth all things. He holds the destinies of nations in the palm of His hand; and He will solve the question and rescue these people from the difficulties that have so long surrounded them. Then let us be patient, industrious, and persevering. Let us develop intellectual and moral worth. I trust what I have said may be understood and appreciated. Go to your homes and lead peaceful, prosperous, and happy lives, in peace with all men. Give utterance to no word that would cause dissensions; but do that which will be creditable to yourselves and to your country. To the officers who have led and so nobly commanded you in the field I also return my thanks for the compliment you have conferred upon me.

But it was early apparent that obstacles existed to a complete restoration of the people of the Southern States to civil rights, beyond the power of the President to set aside. On July 2, 1862, Congress passed an act requiring every person who might subsequently be elected, or appointed to any office of honor or profit under the Government of the United States, either in the civil, military, or naval departments, except the President, to take the following oath before entering on the duties of such office:

I, A B, do solemnly swear (or affirm), that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have neither sought nor accepted nor attempted to exercise the functions of any office whatever, under any authority or pretended authority, in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution within the United States hostile or inimical thereto. And I do further swear (or affirm), that to the best of my knowledge and ability, I will support and defend the Constitution of the United States, against all enemies foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter, so help me God.

By this oath, all persons in the Southern States who had either directly or indirectly been engaged in hostilities, were excluded from holding judicial, revenue, legislative, military, or naval Federal offices. By an act of Congress, of January 24, 1865, no person can be admitted as an attorney or counsellor of the Supreme, Circuit, or District Court of the United States, or the Court of Claims, without taking the above-mentioned oath. Several cases arose under this act, known as the lawyers' test oath act, and the question of the constitutionality of the act came before the Supreme Court of the United States, but no decision was rendered during the year. That Court, however, set aside the rule it had adopted, not to call the Southern States for cases during the war, and ordered those States to be called. It still remained, before

restoration could be complete, that the oath should be modified, and that members from the Southern States should be admitted as Senators and Representatives in Congress. These members had been elected in each Southern State except Texas, previous to the commencement of the session, and were mostly in Washington, ready to take their seats. These subjects were properly within the province of Congress, and no decisive action was taken upon them by that body during the year. The question of representation was referred to a joint committee of both Houses in December, together with all the credentials of Southern members. Subsequently, the Secretary of the Treasury and the Postmaster-General appealed to Congress to modify the oath, as they were unable to find Southern persons to fill a large number of offices who could conscientiously take the oath. A committee of the House, of which Mr. Wilson, of Iowa, was chairman, reported against its modification or repeal.

On the 12th of December the Senate of the Federal Congress adopted a resolution calling upon the President for information respecting the condition of affairs in the Southern States. To this request the President made the following reply:

WASHINGTON, December 13, 1865.

To the Senate of the United States:

In reply to the resolution adopted by the Senate on the 12th, I have the honor to state that the rebellion waged by a portion of the people against the properly constituted authorities of the Government of the United States has been suppressed; that the United States are in possession of every State in which the insurrection existed, and that as far as could be done, the courts of the United States have been restored, post-offices reestablished, and steps taken to put into effective operation the revenue laws of the country.

As the result of the measures instituted by the Executive with the view of inducing a resumption of the functions of the State, comprehended in the inquiry of the Senate, the people in North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, and Tennessee, have reorganized their respective State governments, and are yielding obedience to the laws and Government of the United States with more willingness and greater promptitude than under the circumstances could reasonably have been anticipated. The proposed amendment to the Constitution providing for the abolition of slavery forever within the limits of the country, has been ratified by each one of those States, with the exception of Mississippi, from which no official information has been received; and in nearly all of them measures have been adopted, or are now pending, to confer upon freedmen the privileges which are essential to their comfort, protection, and security.

In Florida and Texas the people are making commendable progress in restoring their State governments, and no doubt is entertained that they will at an early period be in a condition to resume all of their practical relations with the Federal Government. In that portion of the Union lately in rebellion, the aspect of affairs is more promising than, in view of all the circumstances, could well have been expected. The people throughout the entire South evince an audible desire to renew their allegiance to the Government, and to repair the devastations of war by a prompt and cheerful return to peaceful pursuits. An abiding faith is entertained that their actions will conform to their professions and that, in acknowl-

edging the supremacy of the Constitution and the laws of the United States, their loyalty will be unreservedly given to the Government whose leniency they cannot fail to appreciate, and whose fostering care will soon restore them to a condition of prosperity. It is true that in some of the States the demoralizing effects of the war are to be seen in occasional disorders; but these are local in character, not frequent in occurrence, and are rapidly disappearing as the authority of civil government is extended and sustained.

Perplexing questions were naturally to be expected from the great and sudden change in the relations between the two races; but systems are gradually developing themselves under which the freedman will receive the protection to which he is justly entitled, and by means of his labor make himself a useful and independent member of the community in which he has his home.

From all the information in my possession, and from that which I have recently derived from the most reliable authority, I am induced to cherish the belief that sectional animosity is surely and rapidly merging itself into a spirit of nationality, and that representation, connected with a properly adjusted system of taxation, will result in a harmonious restoration of the relations of the States to the national Union.

The report of Carl Schurz is herewith transmitted, as requested by the Senate. No reports from the Hon. John Covode have been received by the President.

The attention of the Senate is invited to the accompanying report of Lieut.-Gen. Grant, who recently made a tour of inspection through several of the States whose inhabitants participated in the rebellion.

ANDREW JOHNSON.

This reply of the President was accompanied by the following letter from Lieut.-Gen. Grant:

HEADQUARTERS ARMY OF THE UNITED STATES, }
December 18, 1865. }

To His Excellency A. Johnson, President of the United States.

Sir: In reply to your note of the 16th instant, requesting a report from me giving such information as I may be in possession of, coming within the scope of inquiries made by the Senate of the United States in their resolution of the 12th instant, I have the honor to submit the following with your approval, and also that of the Honorable Secretary of War.

I left Washington on the 27th of last month for the purpose of making a tour of inspection throughout some of the Southern States lately in rebellion, and to see what changes were necessary in the disposition of the military forces of the country, and how these forces could be reduced and expenses curtailed, etc., and to learn, as far as possible, the feelings and intentions of the citizens of the States toward the General Government. The State of Virginia being so accessible to Washington City, and information from this quarter, therefore, being readily obtained, I hastened through the State without conversing or meeting with any of the citizens. In Raleigh, N. C., I spent one day; in Charleston, S. C., two; and in Savannah and Augusta, Ga., each one day. Both in travelling and while stopping I saw much and conversed freely with citizens of those States, as well as with officers of the army who have been stationed among them. The following are the conclusions come to by me:

I am satisfied the mass of thinking men of the South accept the present situation of affairs in good faith. The questions which have hitherto divided the sentiments of the people of the two sections—slavery and State rights, or the right of a State to secede from the Union—they regard as having been settled forever by the highest tribunal of arms that man can resort to. I was pleased to learn from the leading men whom I met that they not only accepted the decision arrived at as final, but now that the

smoke of battle has cleared away, and time has been given for reflection, that this decision has been a fortunate one for the whole country, they receiving the like benefits from it with those who opposed them in the field and in the council. Four years of war, during which the law was executed only at the point of the bayonet throughout the States in rebellion, have left the people, possibly, in that condition not to yield that ready obedience to civil authority the American people have generally been in the habit of yielding. This would render the presence of small garrisons throughout those States necessary until such time as labor returns to its proper channel, and civil authority is fully established. I did not meet any one, either those holding places under the Government or citizens of Southern States, who thought it practicable to withdraw the military from the South at present. The white and black mutually require the protection of the General Government. There is such universal acquiescence in the authority of the General Government throughout the portions of the country visited by me, that the mere presence of a military force, without regard to numbers, is sufficient to maintain order.

The good of the country requires that a force be kept in the interior where there are many freedmen. Elsewhere in the Southern States than at forts on the sea-coast no force is necessary. The soldiers should all be white troops. The reasons for this are obvious. Without mentioning many of them, the presence of black troops, lately slaves, demoralizes labor both by their advice and furnishing in their camps a resort for the freedmen for long distances around. White troops generally excite no opposition, and therefore a smaller number of them can maintain order in a given district. Colored troops must be kept in bodies sufficient to defend themselves. It is not the thinking man who would do violence toward any class of troops sent among them by the General Government, but the ignorant in some places might; and the late slave, too, who might be imbued with the idea that the property of his late master should by right belong to him, at least should have no protection from the colored soldier. There is no danger of a collision being brought on by such causes.

My observations lead me to the conclusion that the citizens of the Southern States are anxious to return to self-government within the Union as soon as possible; that whilst reconstructing they want and require protection from the Government, and is not unmilitary to them as citizens, and if such a course was pointed out they would pursue it in good faith. It is to be regretted there cannot be a greater commingling at this time between the citizens of the two sections, and particularly of those intrusted with the law-making power.

I did not give the operations of the Freedmen's Bureau that attention I would have done if more time had been at my disposal. Conversation, however, on the subject with officers connected with the Bureau, lead me to think that in some of the States its affairs have not been conducted with good judgment or economy, and that the belief widely spread among the freedmen of the Southern States that the lands of their former owners will, at least in part, be divided among them, has come from agents of the Bureau. This belief is seriously interfering with the willingness of the freedmen to make contracts for the coming year. In some form the Freedmen's Bureau is an absolute necessity until the civil law is established and enforced, securing to freedmen their rights and full protection. At present, however, it is independent of the military establishment of the country, and seems to be operated by the different agents of the Bureau, according to their individual notions. Everywhere, General Howard, the able head of the Bureau, has made friends by the just and fair instructions and advice he gave, but the complaint in South Carolina was that when he left,

things went on as before. Many, perhaps a majority of the agents of the Freedmen's Bureau, advised the freedmen that by their own industry they must expect to live. To this end they endeavored to secure employment for them, and to see that both of the contracting parties complied with their engagements. In some cases, I am sorry to say, the freedman's mind does not seem to be disabused of the idea that the freedman has a right to live without care or provision for the future. The effect of this belief in the distribution of the lands is idleness, and accumulation in camps, towns, and cities. In such cases, I think it will be found, that vice and disease will tend to the extermination or great destruction of the colored race. It cannot be expected that the opinions held by men at the South for years can be changed in a day, and therefore the freedmen require for a few years not only laws to protect them, but the fostering care of those who will give them good counsel and on whom they can rely.

The Freedmen's Bureau being separated from the military establishment of the country, requires all the expense of a separate organization. One does not necessarily know what the other is doing, or what orders they are acting under. It seems to me this could be corrected by regarding every officer on duty with the troops in the Southern States as agents of the Freedmen's Bureau, and then have all orders from the head of the bureau sent through the department commanders. This would create a responsibility that would beget uniformity of action throughout the South, and would insure the orders and instructions from the head of the Bureau being carried out, and would relieve from duty and pay a large number of the employes of the Government.

I have the honor to be, very respectfully,
Your obedient servant,
U. S. GRANT, Lieut.-General."

During the ensuing year, 1866, reports were made by General Schurz and others, presenting a less favorable aspect. These will be noticed hereafter.

On December 18th, the Secretary of State, Mr. Seward, officially announced from the State Department that the amendment of the Federal Constitution abolishing slavery had been adopted. After reciting the amendment, he proceeded to say:

And *whereas*, it appears from official documents on file in this Department, that the amendment to the Constitution of the United States, proposed as aforesaid, has been ratified by the Legislatures of the States of Illinois, Rhode Island, Michigan, Maryland, New York, West Virginia, Ohio, Missouri, Nevada, Indiana, Louisiana, Minnesota, Wisconsin, Vermont, Tennessee, Arkansas, Connecticut, New Hampshire, Maine, Kansas, Massachusetts, Pennsylvania, Virginia, South Carolina, Alabama, North Carolina, and Georgia—in all twenty-seven States:

And *whereas*, the whole number of States in the United States is thirty-six:

And *whereas*, the before specially named States, whose Legislatures have ratified the said proposed amendment, constitute three-fourths of the whole number of States in the United States:

Now, therefore, be it known, that I, William H. Seward, Secretary of the United States, by virtue and in pursuance of the second section of the act of Congress, approved on the 20th of April, 1818, entitled "An act to provide for the publication of the laws of the United States and for other purposes," do hereby certify that the amendment aforesaid has become valid to all intents and purposes as part of the Constitution of the United States.

Many conventions were held during the year, in both the Northern and Southern States,

by the colored people. The object sought in these assemblages was to improve their condition politically, by the acquisition of the elective franchise, and to stimulate a desire for education, industrial habits, and good morals. The destruction of these people by the war, particularly in the Southern States, was presented in a most alarming aspect by Senator Doolittle in a speech at New Haven, in Connecticut. He said:

Do you not know that the colored population has perished by thousands and hundreds of thousands during the war? We have no accurate data upon which to state the precise number that have perished, but the highest officers in our army state unqualifiedly that in their opinion at least one million have perished. Gov. Aiken, of South Carolina, who has been a Union man, and was one of the largest slaveholders of the South, owning at one time over eight hundred slaves, himself stated to me in Washington the other day, unqualifiedly, that at least a million had perished, and in his opinion a great many more; also, the Hon. Randal Hunt, of the city of New Orleans, states the same opinion; and Captain Haines, of the Union army of Louisiana, who has lived always at the South, states his opinion that at least a million have perished, and these gentlemen tell you the reason on which they found this opinion. Some, of course, have perished in battle; perhaps fifty thousand have perished in battle, or of their wounds, but that has not been the principal source of their destruction. Small-pox and other terrible diseases that follow the march of armies have prevailed among them to a terrible extent, all the way from the Rappahannock to the Rio Grande. The small-pox has swept them away in camp and on plantations, and everywhere by thousands upon thousands. It is also a fact that when these diseases spread among those not accustomed to attend to the diseases among themselves, they have, to a great extent, been neglected by the white people. The masters and those connected with them lost interest in them. They perished by hundreds of thousands. These are the appalling facts, and yet they are true. I have no doubt that when we come to take the census of 1870, two-fifths of the whole colored population will have perished.

The relations of the United States with foreign countries are noticed under the title, DIPLOMATIC CORRESPONDENCE, to which the reader is referred; as also to ARMY and NAVY, for the military and naval operations of the Government. Under appropriate titles, all the important subjects forming a part of public affairs will be found.

The system of taxation adopted by the Government originated in haste, and was presented in crude measures which have been modified at every subsequent session of Congress. The results of experience and the investigations of intelligent men, have advanced so far, that the year 1866 will witness the adoption of a very complete system, that will be fully presented in the subsequent volume.

A movement was set on foot to reduce the hours of manual labor for a day's work, from ten or more, to eight hours. It was received with favor and gathered strength with the lapse of time. Nothing decisive had been effected previous to the close of the year.

UNIVERSALISTS. The "Universalist Register" for 1866 contains the following statis-

tics of Universalism in the several States of the Federal Union and of British America:*

States.	Conventions.	Associations.	Societies.	Ministers.

The United States Universalist Convention met at Middletown, Conn., on September 19, 1865. John T. Gilman, Esq., of Maine, presided. It was stated that during the last two years the denomination have raised, for educational and other purposes, over five hundred thousand dollars. The Convention voted to appoint a board of trustees to raise and use one hundred thousand dollars during the present year for missionary purposes. A majority of the board was selected from New York, and they were instructed to seek an act of incorporation.

URUGUAY. ("The Oriental Republic of Uruguay"), a republic in South America. Provisional President, November, 1865, Venancio Flores. Its area is about 3,375 geographical square miles. The population in 1860 was about 240,965. In 1864 a circular from the Minister of the Exterior, Dr. Juan José Herrera, stated that the population had risen to 350,000, among whom were 150,000 foreigners; that the value of real estate was 140,000,000, and that of cattle 50,000,000 piasters. The imports in 1862 were valued at 12,000,000, and the exports at 10,000,000 piasters.

The close of the year 1864 found the Government of Uruguay at war against the Brazilians, who had invaded the territory of the republic, to aid the insurrection headed by Gen. Venancio Flores. From December 6th to 10th, a fierce engagement took place at Paysandu, which was besieged by Flores, while a Brazilian squadron blockaded the port. The town was reduced to a heap of ruins; but the garrison, only seven hundred strong, held out until January 2, 1865, when the insurgents and Brazilians (numbering about 8,000) succeeded in capturing it by a treacherous stratagem. Gen. Gomez, the commander of the garrison, was shot, and the town for five days abandoned to pillage. From Paysandu the combined force of insurgents and Brazilians marched upon the capital of the republic, Montevideo. A blockade of this city was declared on February 2d, and recognized

by foreign ministers, seven days being granted to those who wished to leave the place. On February 9th the hostilities began. On the same day, President Aguirre resigned his office, and was succeeded by Senator Villalba, who entered into negotiations with the enemy. Plenipotentiaries appointed by him concluded at La Union a treaty of peace with Flores, which was approved by the envoy extraordinary of Brazil. On February 22d Gen. Flores made his entrance into Montevideo, at the head of his troops and one Brazilian brigade. In conformity with the treaty of peace, he assumed the functions of Provisional President. He at once declared the treaties with Brazil, which on December 13, 1864, had been suspended by Aguirre, to be reestablished. On May 4th Flores formed a treaty of alliance, offensive and defensive, with the Argentine republic and Brazil against Paraguay.*

In November a serious difficulty arose between the Governments of Chili and Uruguay, which led to a rupture of diplomatic relations. The Government of Uruguay desired to observe a strict neutrality in the war between Chili and Spain. When, therefore, on November 2d, the Chilean ambassador at Buenos Ayres, Señor Lastarria, being then in Montevideo, requested permission from the Government for privateers to bring into that port and dispose of whatever prizes they might make among Spanish merchantmen to Uruguay, the Government replied, on the 15th, emphatically prohibiting the sale of any prizes in any of the ports of the republic. The Chilean minister then returned to Buenos Ayres, and under date November 20th, insisted, in a lengthy note, that the Government would just as well maintain a strict neutrality by allowing privateers to sell. Señor Castro replied on the 27th, showing that it was no less the right than the convenience of Montevideo to refuse the demands of the Chilean agent; and Señor Lastarria sent a second, more urgent note, dated December 1st, to which the Government again replied on the 12th instant, expressing much surprise at the language of the Chilean minister. Hereupon Señor Lastarria on the 15th sent back the note of the Montevidean Government, requesting his Excellency Señor Castro to change some offensive phrases which he could not admit. The Montevidean Government then issued the following decree, bearing date December 21st:

Whereas, his Excellency Señor Lastarria, envoy extraordinary and minister plenipotentiary of Chili, in his dealings with the Government respecting his pretensions for the sale of such Spanish prizes as may be taken by Chilean corsairs, has used language both intemperate and unusual to diplomatic customs, which cannot be defended on the ground of zeal for the interests of his country, since he should never fail in the respect due to a national authority; and moreover that Señor Lastarria's note of the 15th instant, returning that of the Government, is a new and unusual presentation, which the dignity of the Government cannot admit; and finally, that the at-

* The above table embraces only the statistics which were reported to the editor of the "Register." There are a number of associations, societies, and ministers, from which no report was received, and which therefore are not included in the list.

* For the progress of the war, see PARAGUAY.

titude of the Chilean envoy utterly prevents the continuance through him of relations of harmony and friendship between Montevideo and Chili, which it is our purpose to consolidate:

The Provisional Government decrees: 1st. The exequatur of Señor Lastarria is hereby withdrawn. 2d. The Minister of Foreign Affairs will explain to the Chilean Government the motives which have reluctantly called for this measure. 3d. Let the whole correspondence be published, as well as the decree on prizes. (Here follow the signatures of the Governor and four ministers.)

The decree relative to prizes prohibits: 1st. The construction of privateers in any port of the republic. 2d. The sale of prizes by either belligerent. 3d. The delay of Chilean or Spanish war-vessels for more than twenty-four hours in any port. 4th. The conveyance of contraband of war in Montevidean bottoms. 5th. The intervention of Montevidean citizens for either belligerent.

V

VENEZUELA, a republic in South America. President, Ant. Guzman Blanco, elected in 1865 Vice-President; became President in consequence of the resignation of President Juan Crisostomo Falcon. Minister of the United States near the Government of Venezuela, Erastus D. Culver, appointed May, 1862. Minister of Venezuela in Washington, Blas Bruzual. Area, 426,712 square miles. Population in 1858, 1,565,000.

In September, 1864, the State of La Guayana declared itself independent of the Federal Government, on account of several measures adopted by the latter. The Federal Government prepared to prevent the secession by force of arms, and declared the mouth of the Orinoco in a state of blockade. The difficulty was, however, peaceably arranged in October, between commissioners of the Government and the State of La Guayana.

The Federal Congress was opened at Caracas on March 18, 1865. Of twenty States of the Confederation, nineteen voted for the reelection of President Falcon to the presidency. Gen. Falcon entered upon his functions on June 8th. Soon after the President went to Maracaibo, in order to suppress an insurrection instigated by the young General Venancio Pulgar. The latter had, however, been defeated before the arrival of the President, and with difficulty escaped into the neighboring republic. Tranquillity having been fully reestablished, the President returned to Caracas on July 24th, and entered upon the exercise of his presidential functions.

VERMONT. The political campaign for 1865 opened with the meeting of the Democratic State Convention at Burlington, on June 27th. Charles N. Davenport was nominated for Governor, and D. C. Linsley for Lieutenant-Governor; and a series of resolutions was adopted, of which the following are those relating to national affairs:

Resolved, That we have renewed confidence in and reneration for democratic principles. Because those principles were disregarded, we have been afflicted with one of the worst civil wars that the world has ever known, destroying, probably, a half million of our citizens in the prime of life and the vigor of health, and oppressing us and our posterity with a national debt of more than four thousand millions of dollars, and the consequence of taxation to provide for the same; and deploring these and other evils to

the country, which have come upon it in consequence of a disregard of the principles of the National Democratic party, we have to-day renewed our devotion to that party and its principles, as the only basis of national liberty and self-government.

Resolved, That armed resistance to the General Government having ceased in all the States and Territories, civil law should immediately be restored, not only in the States which have been true to the General Government, and which have been arbitrarily and unjustly deprived of it, but throughout the whole country.

Resolved, That this being the military condition of the country, the control of the several States as they existed before the rebellion, should at once be given to the white citizens thereof who have borne true allegiance to the General Government, and those who will now take an oath to hereafter bear true allegiance to the State and national authority.

Resolved, That believing, with the immortal Douglas, that the Government of the country was organized for, and should be controlled by, the white race therein, and that the good of all will best be promoted by confining the right of suffrage to the white citizens thereof, we are unalterably opposed to conferring the right of suffrage upon the ignorant negroes of the country.

Resolved, That in the wise and constitutional policy of President Johnson to restore all the States to their constitutional position, reinvesting them with rights and corresponding duties, and cementing anew the integrity of the Government, we discern a most happy augury that the malignity which strife and collision have engendered may be happily supplanted by the fraternity which enabled our fathers to form the Constitution and create the Union; and if, with Jacksonian firmness, he will maintain his policy against the plottings of treason on the one hand, and the raving and ribaldry of fanaticism on the other, we tender to him our earnest and undivided support.

A motion was made to strike out the word "white" in the fourth resolution, on the ground that it was unnecessary, and would be detrimental to party interests. But after considerable discussion, it was decided to make no change in the language of the resolution.

The Republican call for a Convention invited all freemen of the State who would support the administration of President Johnson, and aid in reestablishing the Federal authority and Government over all the States and Territories of the United States, upon the enduring basis of universal freedom, to meet at Montpelier on June 28th. Paul Dillingham was nominated for Governor, and A. B. Gardner for Lieutenant-Governor. Among the resolutions adopted by the Convention were the following:

Resolved, That looking back to the happy experience of our own State in extending the largest liberty to native or naturalized citizens, of quiet and peaceable behavior, irrespective of color or race, and forward to the inestimable blessings that will flow to the late slave States from a free, industrious, intelligent, virtuous, peaceable, and patriotic population, we do respectfully and earnestly counsel the people of those States that they blot out forever from their statutes all laws pertaining to the late condition of slavery, and to concede to all their native and naturalized citizens, by constitutional guaranty, equality of civil and political rights, leaving to each to reach his proper social position by the character he bears and the merit he fairly wins.

Resolved, That on the failure of any reorganized State to give the guaranty named in the preceding resolution, we insist that Congress shall use all its constitutional powers so as to secure a republican government, both in form and essence, to the people of such State.

The election took place in September, with the following result for Governor:

Governor.	Number of Votes.
Paul Dillingham, Republican.....	27,586
Charles N. Davenport, Democrat.....	8,857

Majority for Dillingham..... 18,729

The Legislature stood as follows:

	Senate.	House.	Joint Ballot.
Republicans.....	30	218	248
Democrats.....	0	11	11
Republican majority....	30	203	232

A special session of the Legislature was held in the early part of March, for the purpose of ratifying the antislavery amendment to the Constitution. The business was accomplished in a single day, and the Legislature then adjourned. The amendment was ratified unanimously in the Senate, and with only two dissenting votes in the House. The regular session of the newly elected Legislature was held at Montpelier on October 12th, when J. W. Stewart was chosen Speaker of the House of Representatives, and Governor Dillingham and the other State officers elect were inaugurated. On the same day Governor Smith delivered his valedictory message. On the 19th a joint convention of both houses elected the following justices of the Supreme Court: Chief Justice, L. P. Poland, of St Johnsbury; Associate Justices, John Pierpont, of Vergennes; James Barrett, of Woodstock; Loyal O. Kellogg, of Rutland; Asahel Peck, of Montpelier; and William O. Wilson, of Bakersfield. Reporter of Supreme Court Decisions, W. G. Veasey, of Rutland. On November 21st Gov. Dillingham appointed Chief Justice Poland United States Senator, in place of Jacob Colamer, who died subsequent to the adjournment of the Legislature. His place on the supreme bench was filled by the appointment of John Pierpont, and Benjamin Steele was appointed fifth Associate Justice. Among the acts passed by this Legislature was one ratifying a decree of the Court of Chancery, which authorized the managers and receivers of the Vermont Central and Vermont and Canada Railroads to borrow \$700,000 on ten years' 8 per cent. bonds. The property and income of

the roads are to be pledged as security for the bonds. A resolution was also adopted affirming that "in the reconstruction of the government of the States lately in rebellion against the Government and authority of the United States, the usual power and legal authority vested in the Federal Government should be exercised to secure equal rights, without respect to color, to all citizens residing in those States, including therein the right of elective franchise." This was ordered to be sent to the President of the United States, and the Governors of the several States.

The receipts into the treasury of the State for the year ending September 1, 1865, were \$2,009,261, and the expenditures, \$1,996,772; excess of receipts over expenditures \$12,489. The funded liabilities amount to \$1,661,179, which sum is reduced by current resources to the extent of \$23,411. The extraordinary receipts and disbursements for the past four years have been:

<i>Receipts.</i>	
Taxes.....	\$3,406,093
State bonds outstanding.....	1,650,000
Reimbursements from United States.....	607,308
Total.....	\$5,663,396

<i>Disbursements.</i>	
Governor's warrants and Auditor's orders approved by the Governor.....	\$1,179,939
Extra pay to soldiers.....	8,275,504
Direct tax paid United States.....	179,407
State bonds paid.....	150,000
Ordinary expenses, including interest on bonds..	878,245
Total.....	\$5,663,396

The expenses incurred by Vermont in support of the late war for the preservation of the Union, are stated by the Adjutant-General at \$3,600,752.52. Of this sum by far the greater part, viz., \$3,386,765.80, comes under the head of State bounty of seven dollars per month, paid to Vermont soldiers during their time of service in the United States army. In addition to this the several towns and municipal corporations expended for bounties \$5,210,897.45, making an aggregate expenditure by the State and the towns, from 1861 to 1865, of \$8,811,649.97.

The surplus number of men furnished by the State over all calls amounted at the close of the rebellion to 679. The total number of troops furnished by her during the war was 30,705, besides 3,800 drafted men and substitutes, making the whole number 34,655. For militia purposes the State of Vermont has been divided into military districts. The militia force includes three brigades, composed of twelve regiments, embracing one hundred and twenty companies, with a regiment of cavalry added, one battalion attached to each brigade, and also a battery of artillery to each. These have been severally efficiently armed and equipped by the Government, and proper armories provided. The amount expended in State aid to soldiers' families for the year ending September 1, 1865, was \$17,584, the number of persons aided was 1,832. The total amount

of aid given during the last four years has been \$73,542. The State agencies in New York, Philadelphia, and Washington, have been closed since the 1st of October, 1865.

Compared with other New England States, Vermont produces, according to the last census, the most horses, sheep, butter, cheese, wool, wheat, oats, hops, and maple sugar. Compared with the other New England States, according to population, it produces in addition to these products the most barley and potatoes. The maple sugar manufactured in this State is now nearly equal in value to its products of wool. At the present price of sugar, this product is likely to be largely increased. The average annual product since the last census was taken has, probably, been much greater than before. But one State, New York, makes more maple sugar, Vermont making nearly four times as much, in proportion to the size of the State. The least of the five States that make more butter, Indiana, is more than three times as large as Vermont, and contains more than four times as many inhabitants. Vermont, nevertheless, was the only State in the Union whose population was not materially increased during the last census decade. But three States—Maine, New Hampshire, and Vermont—increased less than ten per cent. The gain of a fractional part of one per cent. barely saved Vermont from a loss. Upwards of one hundred thousand natives of the State may be found in other parts of the country, and notwithstanding the facilities offered for sheep-raising, and other branches of rural economy, she seems destined to remain stationary in population, a feeder to the new States of the far West.

VIRGINIA. The state of affairs in Virginia, previous to the close of the war, was so intimately connected with the Confederate Government, whose headquarters were at Richmond, that a reference to that title is made. The disappearance of the army of Gen. Lee left the State largely desolated, the inhabitants impoverished, the civil authority powerless, and at the mercy of the Federal commanders. The desolations of the Shenandoah Valley, and in the track of the armies near the Rapidan, were at this time thus sketched:

We have also conversed with an intelligent friend, who formerly resided at Edinburg, in Shenandoah County, and who has been compelled to bring his family into a more favored locality, to keep them from starving, and he gives a deplorable picture of the sufferings and privations of these unfortunate people. But a small amount of grain is in possession of the inhabitants, and what little they have it is hardly possible to get ground for want of mills, all having been burned except five or six, in the extent of country of which we speak. In many instances corn has been pounded, baked, and consumed in a rough state, and our informant states that he is familiar with instances where the people have mixed middlings with bran and baked it into bread in order to stretch the food. Cattle, hogs, and sheep, have been swept away, and but few horses remain with which to cultivate the ground and raise a crop the present season. It is hard to realize and believe that such a

state of things exists, but it nevertheless is fearfully true.

Another says:

With the exception of small enclosures of one or two acres, here and there, there is scarcely a fence worthy of the name from the Rapidan to Bull Run; and the fields, once the pride of the farmers' hearts, and shut in by "ten rails and a rider," are now broad commons, with old landmarks obliterated, ditches filled up, quarters, cornhouses, and barns in ruins, while the lone and blackened chimneys of the once happy homestead stand like some grim old sentries on guard until the last.

The once majestic forests of oak, hickory, chestnut, and pine along the line of the Orange and Alexandria Railroad have disappeared and given place to the rude huts and cabins improvised by the armies of Lee and Meade; and instead of whortleberries, chinquapins, and chestnuts, one kicks up canteens, worn-out knapsacks, odd shoes, bread-boxes, suggestive of the inevitable "hard tack," bayonet-scarbards, with here and there a stand of grape, a ten-pounder Parrott shell, and everywhere almost the hollow-base "little Minies," whose whistling tones are so familiar to us all.

The village of Raccoonford is a village no longer. Stevensburg is Stevensburg only on the military maps; and all along the route, crossing and recrossing the railroad, one sees nothing where man's agency is concerned but utter desolation.

The people are returning to their once happy homes, after such hardships as refugees only can know, and are patching up any outbuildings at hand for a temporary residence until the "great house" can be rebuilt and former comforts collected around them.

The negroes in Orange County can be hired for their food and quarters; but this does not pertain in Culpepper and Fauquier, where labor is scarce and in demand, as nearly every negro—man, woman, and child—left home early in the war, with the hope of an improved condition in the crowded streets of Alexandria and Washington. The supply, however, will be equal, and perhaps more than equal, to the demand, when the farmers are once more prepared to cultivate their lands, but just now there is a feeling of oppressive uncertainty hanging over every man's head; and until courts are established, magistrates, sheriffs, surveyors, commissioners, etc., are appointed, this feeling will prevail, and tend materially to retard the development of the agricultural resources of the country, and of that desire to do their duty as good and loyal citizens, which is the sincere and hearty wish of nine-tenths of the people of Virginia, now that the terrible struggle is over, and which has been decided finally against them. The farmers need nearly every article necessary to a successful cultivation of their lands, and with but very limited means for purchasing them, no credit, and an entirely new system of labor to contend with, the problem of success seems to be one of difficult solution; but with industry, skill, and integrity, the prolific soil will soon supply their wants, and in a few years one will scarcely be able to recognize this as the classic battleground of the two celebrated armies of the Potomac and Northern Virginia.

When the evacuation of Richmond was decided upon, orders were issued to destroy all buildings belonging to or rented by the Government, of which there was a large number in the business portion of the city. The orders were too well executed, and an appalling scene of destruction was presented, and the flames were only stayed by the aid furnished on the arrival of Northern troops, many of whom were blacks.

The defences of Richmond, upon which so

much science and skill had been expended, consisted of three lines of works. The first line was about a mile from the city. It consisted of a series of detached earth forts, entirely encircling Richmond. They were within a common range of each other, but not connected by any line of breastworks, and so placed as to command all the roads or other avenues of approach. The forts were pierced for four and in some cases six guns, but none had been mounted; it had evidently been intended that they should be used as a last resort, in the event of the outer lines being carried. The depth from the bottom of the ditch to the top of the earth parapet was about ten or fifteen feet. Rather more than a mile from this line of defence was the second. It was a connected system of works extending from a point about three miles south of Richmond, on the James River, entirely around the northern side of the city, till the line again touched the river three miles north of Richmond. This line was supplemented at various points by additional earth-works commanding the roads leading down to the different pontoon bridges across the James, which were used to cross with supplies to the armies or to the city. The forts which formed the angles of this line of works, and all of which were connected by breastworks, with a ditch in front, were not so large and formidable as the detached forts nearer the city, or those on the third or outer line. The second line was reached only on one occasion by Federal troops, under General Terry, who skirmished up to it, after breaking through a part of the outer line. Four or five miles beyond the second line of defence was the third, which also commenced at the James River, and about opposite to Fort Darling. It was carried continuously around the city, to a point on the James about three miles north of the second line. It was by far the most formidable of all. It was not parallel with the second, but in some places nearer, and at others more distant, advantage having been taken of the undulating surface of the ground. At about the most southerly angle of the line was Fort Johnson. Southeast from this was Fort Harrison, and about three hundred yards distant. About one to three hundred yards distant from each other, were placed similar forts along the whole line. Fort Johnson had three points for heavy guns, the centre one forming the apex of a triangle with the other two, and all being connected with a heavy line of breastworks, with a deep ditch in front. At each of the points at which heavy guns were placed, there was a bomb-proof to protect the men from the fire of artillery and shells. The breastworks were formed by driving timbers well into the ground, and building in front of them an earthen wall some six or seven feet high, and about as many broad, with a ditch in front about six feet deep, and nearly as many wide, thus making about 12 to 14 feet from the bottom of the ditch to the top of the earthen parapet or wall. There

were embrasures for guns, commanding the country in front of the fort, and partially also the ditches in front of the breastworks. About 100 feet in front of the fort was a line of abatis, formed of timber about the thickness of heavy cordwood, firmly embedded in the ground, with sharply pointed ends, and rising a height of about three feet at the sharp end. This pointed timber was planted close together, and was a most formidable barrier to break through, under the fire of heavy guns and rifles blazing away from the fort. In advance of this line of abatis were two similar lines at about 100 feet apart, so that before reaching the ditch, three separate lines of abatis had to be passed or broken through under a heavy fire, besides that between each line numerous shells were placed, and lightly covered with earth, which, on being trod upon, at once exploded. In advance of the third line of abatis were the picket posts, formed of a triangular mound of earth to protect the sentry. When to all this is added that for a mile in front of the fort the forest had been cut down, the difficulties of an attacking column may be imagined, they having to charge for nearly a mile under accurate range of the guns of the fort, over ground which is covered with trees—which have been made to fall in every possible confusion; and if they succeeded in reaching the first line of abatis, having then to overcome the difficulties above explained, before reaching the edge of the ditch where the final struggle would begin.

Upon the occupation of Richmond by General Weitzel, military authority was established. Steps were taken for the reassembling of the State Legislature with the approval of President Lincoln, who was at the time in Richmond (*see UNITED STATES*). No meeting, however, took place. Major-General Halleck then took command of the military force at Richmond, and modified the course of events by refusing to recognize any official authority in the State officers elected during the war. Affairs continued in this state until May 9th, when President Johnson issued the following:

EXECUTIVE CHAMBER, WASHINGTON CITY, May 9, 1865.

Executive Order to reestablish the authority of the United States, and execute the laws within the geographical limits known as the State of Virginia.

Ordered 1. That all acts and proceedings of the political, military, and civil organizations which have been in a state of insurrection and rebellion, within the State of Virginia, against the authority and laws of the United States, and of which Jefferson Davis, John Letcher, and William Smith were late the chiefs, are declared null and void. All persons who shall exercise, claim, pretend, or attempt any political, military, or civil power, authority, jurisdiction, or right, by, through, or under Jefferson Davis, late of the City of Richmond, and his confederates, or under John Letcher or William Smith and their confederates, or under any pretended political, military, or civil commission or authority issued by them or either of them since the 17th of April, 1861, shall be deemed and taken as in rebellion against the United States, and shall be dealt with accordingly.

2. That the Secretary of State proceed to put in force all laws of the United States, the administration

whereof belongs to the Department of State, applicable to the geographical limits aforesaid.

3. That the Secretary of the Treasury proceed, without delay, to nominate for appointment assessors of taxes and collectors of customs and internal revenue, and such other officers of the Treasury Department as are authorized by law, and shall put in execution the revenue laws of the United States within the geographical limits aforesaid. In making appointments, the preference shall be given to qualified loyal persons residing within the districts where their respective duties are to be performed. But if suitable persons shall not be found, residents of the districts, then persons residing in other States or districts shall be appointed.

4. That the Postmaster-General shall proceed to establish post-offices and post routes, and put into execution the postal laws of the United States within the said State, giving to loyal residents the preference of appointment; but if suitable persons are not found, then to appoint agents, etc., from other States.

5. That the District Judge of said district proceed to hold courts within said State, in accordance with the provisions of the acts of Congress. The Attorney-General will instruct the proper officers to libel, and bring to judgment, confiscation, and sale, property subject to confiscation, and enforce the administration of justice within said State, in all matters civil and criminal within the cognizance and jurisdiction of the Federal courts.

6. That the Secretary of War assign such Assistant Provost Marshal General, and such Provost Marshals in each district of said State, as he may deem necessary.

7. The Secretary of the Navy will take possession of all public property belonging to the Navy Department within said geographical limits, and put in operation all acts of Congress in relation to naval affairs having application to the said State.

8. The Secretary of the Interior will also put in force the laws relating to the Department of the Interior.

9. That to carry into effect the guaranty of the Federal Constitution of a republican form of State government, and afford the advantage and security of domestic laws, as well as to complete the reestablishment of the authority of the laws of the United States, and the full and complete restoration of peace within the limits aforesaid, Francis H. Pierpont, Governor of the State of Virginia, will be aided by the Federal Government so far as may be necessary, in the lawful measures which he may take for the extension and administration of the State government throughout the geographical limits of said State.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

ANDREW JOHNSON.

By the President:

W. HUNTER, Acting Secretary of State.

This order recognized Francis H. Pierpont, who was originally elected Governor in West Virginia, and upon the organization of a State government for that district under the name of West Virginia, moved the seat of his government to Alexandria, and exercised jurisdiction in a few counties adjacent to Washington. The officers of this government were: Francis H. Pierpont, Governor; L. O. P. Cowper, Lieutenant-Governor; Charles H. Lewis, Secretary of State; W. W. King, Treasurer. During the existence of this government at Alexandria, a Legislature was elected and designated as the Legislature of the State of Virginia. It consisted of members from ten counties. (*See ANNUAL CYCLOPEDIA, 1864.*) The Constitution of the State was amended by delegates from these counties,

and adopted in February. It contained a provision that every person who since January 1, 1864, had "voluntarily given aid or assistance in any way to those in rebellion against the Government of the United States," should be disqualified from voting.

Gov. Pierpont, with the other members of his government, arrived in Richmond on May 26th, and was received in a flattering manner. He proceeded to exercise the duties of his office. Regarding his as the "restored State government," he appointed persons in the counties to reorganize them by holding elections for the local officers; in some instances the Governor appointed those officers, in others he authorized those persons to act for the preservation of the peace whom the military officers might appoint. But the difficulties of his situation were such, that he called a special session of the Legislature to meet at Richmond on June 20th. That body duly convened at the appointed time, and the Governor in his message stated that nothing but a pressing exigency had induced him to call the extra session. He then gave a summary of the course of events in West Virginia after secession, and the subsequent removal of his government to Alexandria, and thus stated the results of the division of the State:

In consideration of the division of the State, the number of judges of the Supreme Court is reduced to three. The judiciary of the State remains unchanged, except in the appointment of the judges; they are now nominated by the Executive and confirmed by the Legislature. The time of residence for voters is reduced to one year; persons who held seats in the Confederate Congress, or under the Confederate Government, members of the rebel Legislature, and persons holding office, civil or military, under what is known as the rebel Government of Virginia, except county officers, are disfranchised. Also, persons offering to vote are required first to take an oath to support the Constitution of the United States, and the laws made in pursuance thereof, as the supreme law of the land; also, to uphold and support the restored government of Virginia, established by the convention which assembled at Wheeling on the 11th day of June, 1861, and that the person offering to vote has not willingly aided the rebellion since the first of January, 1864. The Legislature has authority to restore persons disfranchised by these provisions, from time to time, as it may deem best. At the last session, it removed the disability from all officers who were called out by the rebel State authority in 1861, and who had not gone into the rebel army after they were disbanded. Thus, State sovereignty—the status of the African race—the armed resistance to the Government of the United States—are disposed of; and we have arrived at the important point of the restoration of our State to all its former relations in the Union. This is a delicate task, and one that demands great wisdom and prudence.

Since coming to Richmond he had conversed with intelligent men of every shade of political opinion and from every portion of the State. He was convinced, he said, that if the test of loyalty prescribed by the Constitution was enforced in the election and qualification of officers, it would render organization impracticable in most of the counties of the State. "It was folly to suppose that a State could be governed

under a republican form of government wherein a large portion of the State, nineteen-twentieths of the people, are disfranchised and cannot hold office. But, fortunately, by the terms of the Constitution, the General Assembly has control of this subject. The restricting clauses of the Constitution were devised in time of war. But we have passed through this great and terrific conflict, waged on both sides with a skill and pertinacity seldom equalled. Men accept the facts developed by the logic of the past four years, declare that they have taken the oath of allegiance to the Government of the United States without mental reservation, and intend to be, and remain, loyal to the Government of their fathers. It would not be in accordance with the spirit of that noble Anglo-Saxon race, from which we boast our common origin, to strike a fallen brother, or impose upon him humiliating terms after a fair surrender." He recommended that the amnesty oath prescribed by the President, or one of a similar character, should be substituted for the one required by the State Constitution; also the passage of an act to legalize the marriage of persons of color; also that the State tax be increased to fifteen cents on the hundred dollars of taxable property; and that a day should be fixed for holding elections for members of the Legislature in counties in which no elections had been held, and for members of Congress.

The subject of disfranchisement was immediately taken up in both Houses, and the result of their action was, to allow all to vote for State officers who had not held office under the Confederacy or its State governments upon taking the amnesty oath. Those who had so held office could neither vote nor hold office. This restriction arose from a clause of the amended Constitution, prescribing an oath—"That I have not, since January 1, 1864, voluntarily given aid, etc." The Legislature therefore submitted to the people the question of the removal of this restriction upon office-holders, to be determined at the ensuing election in October.

This action of the Legislature was followed by the appearance of a large number of candidates for the offices, and considerable interest was awakened. Many of the candidates for Congress, finding that they would be unable to take the oath required by that body, withdrew. Some citizens of Albemarle County addressed a letter to President Johnson, asking if, in his opinion, Congress would probably insist upon the oath required, to whom the following reply was given:

ATTORNEY-GENERAL'S OFFICE, }
WASHINGTON, September 28, 1865. }

Messrs. Wood, John Cochrane, and others, Charlottesville, Virginia:

GENTS.: The President has referred to me your letter, dated Charlottesville, Virginia, September, 1865, and I am instructed by him to say that he has no more means of knowing what Congress may do in regard to the oath about which you inquire than any other citizen. It is his earnest wish that loyal and

true men, to whom no objections can be made, should be elected to Congress.

This is not an official letter, but a simple expression of individual opinion and wish.

I am, gents, very respectfully, your obedient servant,
JAMES SPEED, Attorney-General.

The election was held on October 12th, and the vote polled was the smallest ever given in the State. In the first eight Congressional districts, however, it exceeded 40,000. The constitutional amendment met with very little opposition. Many counties voted unanimously for the removal of the restriction.

The Legislature thus elected assembled at Richmond on December 4th. The Governor addressed the usual message to both Houses, in which he stated that in many sections of the State a fair crop had been gathered, which, with prudence and economy, would furnish food to the people until another harvest; that the debt of the State was \$41,061,316, and the assets, consisting of stock of railroads and loans to them, with back interest, amounted to \$27,709,319; that the bank stocks held by the State were probably all lost; that the investment in the James River Canal could not be relied on for income for many years; that for practical purposes the Literary Fund may be said no longer to exist. The holders of State bonds were pressing for the interest due, amounting to six millions of dollars, and the whole subject demanded most careful consideration. The relations of the State with the railroads were presented in detail; the condition of the public institutions, the freedmen, immigration, legal interest, militia, and all those subjects requiring more immediate attention, were explained with much fulness.

In the House, on the second day of the session, an act was introduced to repeal an act passed May 13, 1862, giving the consent of the Legislature of Virginia to the formation and erection of a new State within the jurisdiction of Virginia, etc. The rules were suspended, and it was passed at once, without a dissenting voice. Mr. Woodson, of Buckingham, said the act of the Legislature authorizing the division of the State, and the annexation of the counties of Jefferson and Berkeley to the new State of West Virginia, had not been ratified by the Congress of the United States, and he wished the consent of the State withdrawn before the ratification took place.

The bill was then sent to the Senate, where the rules were suspended, and it was passed. This act repealed the consent given for the formation of the State of West Virginia, and also the consent for the transfer of certain counties to that State.

For the amendment to the Constitution of the State, it was proposed to strike therefrom the following words: "No person shall hold any office under this Constitution who shall not have taken and subscribed the oath aforesaid. But no person shall vote or hold office under this Constitution who has held office under the

so-called Confederate Government, or under any rebellious State government, or who has been a member of the so-called Confederate Congress, or a member of any State Legislature in rebellion against the authority of the United States, excepting therefrom county officers."

The bill was passed unanimously in the House under a suspension of the rules, and subsequently agreed to by the Senate.

A joint resolution was unanimously passed in the House praying the President of the United States to release Jefferson Davis and all political prisoners. The following is an extract:

We most respectfully recommend to his Excellency, Andrew Johnson, President of the United States, to release from confinement Jefferson Davis, and to restore to him his civil rights as a distinguished testimonial to the world of the magnanimity, forbearance, and sagacious wisdom of a great Republic, based on the enlightened freedom of independent States, and cemented by the compact of its illustrious founders. That we further recommend the release of all political prisoners, the restoration of the writ of *habeas corpus*, not only as a solid guaranty of restored peace, but as permitting the States to stand reunited, looking to the Constitution created by our fathers for their protection and safety, with the renewed assurance that Virginia will enter with mutual confidence and reciprocal good faith with her sister States upon her duties under the Constitution enacted and sustained by the spirit and teachings of her illustrious son, George Washington.

The session of the Legislature was extended into the ensuing year, and an immense number of bills of local interest were passed. Bills were also passed legalizing the marriage of negroes; repealing all laws relating to slaves and slavery; admitting them as witnesses in civil cases in which colored persons are interested, and in all criminal cases. Qualifications for suffrage were confined to white males of twenty-one years of age and upwards, who had resided in the State two years, and paid the taxes assessed upon them. For the action of the Legislature relative to West Virginia (*see* that title). The following resolutions relative to reconstruction were adopted, and a committee appointed to present them to President Johnson:

1. *Resolved by the General Assembly of Virginia*, That the people of this Commonwealth, and their representatives here assembled, cordially approve the policy pursued by Andrew Johnson, President of the United States, in the reorganization of the Union. We accept the result of the late contest, and do not desire to renew what has been so conclusively determined; nor do we mean to permit any one subject to our control to attempt its renewal, or to violate any of our obligations to the United States Government. We mean to coöperate in the wise, firm, and just policy adopted by the President, with all the energy and power we can devote to that object.

2. That the above declaration expresses the sentiments and purposes of all our people, and we denounce the efforts of those who represent our views and intentions to be different, as cruel and criminal assaults on our character and our interests. It is one of the misfortunes of our present political condition, that we have among us persons whose interests are temporarily promoted by such false misrepresentations; but we rely on the intelligence and integrity of those who wield the power of the United States Government for our safeguard against such malign influences.

3. That involuntary servitude, except for crime, is abolished, and ought not to be reestablished, and that the negro race among us should be treated with justice, humanity, and good faith, and every means that the wisdom of the Legislature can devise should be used to make them useful and intelligent members of society.

4. That Virginia will not voluntarily consent to change the adjustment of political power as fixed by the Constitution of the United States, and to constrain her to do so in her present prostrate and helpless condition, with no voice in the councils of the nation, would be an unjustifiable breach of faith—and that her earnest thanks are due to the President for the firm stand he has taken against amendments of the Constitution forced through in the present condition of affairs.

An act was also passed subjecting the following described persons to the penalties of vagrancy:

1. All persons who shall unlawfully return into any county or corporation whence they have been legally removed.

2. All persons who, not having wherewith to maintain themselves and their families, live idly and without employment, and refuse to work for the usual and common wages given to other laborers in the like work in the place where they then are.

3. All persons who shall refuse to perform the work which shall be allotted to them by the overseer of the poor as aforesaid.

4. All persons going about from door to door, or placing themselves in streets, highways, or other roads, to beg alms, and all other persons wandering abroad and begging.

5. All persons who shall come from any place without this Commonwealth to any place within it, and shall be found loitering and residing therein, and shall follow no labor, trade, occupation, or business, and can give no reasonable account of themselves or their business in such place.

The overseers of the poor, or the special county police, upon discovering vagrants within their respective counties, were required to make a complaint before a justice of the peace, who, if the charge proved to be true, was required to order such person to be hired out for three months upon the best terms that could be obtained, to be applied to the use of the vagrant and his family, after payment of costs. If a vagrant abandoned the service, or ran away and was recovered, he was required to work an additional month without wages, and if necessary confined with ball and chain, etc.

On January 24, 1866, Major-General Terry issued an order "that no magistrate, civil officer, or other person shall, in any way or manner, apply, or attempt to apply, the provisions of the said statute to any colored person in this department." His objections were thus stated:

The said statute specifies the persons who shall be considered vagrants and be liable to the penalties imposed by it. Among those declared to be vagrants are "all persons who, not having the wherewith to support their families, live idly and without employment, and refuse to work for the usual and common wages given to other laborers in the like work in the place where they then are."

In many counties of this State, meetings of employers have been held, and unjust and wrongful combinations have been entered into for the purpose of depressing the wages of the freedmen below the

real value of their labor, far below the prices formerly paid to masters for labor performed by their slaves.

By reason of these combinations, wages utterly inadequate to the support of themselves and their families have, in many places, become the usual and common wages of the freedmen.

The effect of the statute in question will be, therefore, to compel the freedmen, under penalty of punishment as criminals, to accept and labor for the wages established by these combinations of employers. It places them wholly in the power of their employers, and it is easy to foresee that, even where no such combinations now exist, the temptation to form them offered by the statute will be too strong to be resisted, and that such inadequate wages will become the common and usual wages throughout the State.

The ultimate effect of the statute will be to reduce the freedmen to a condition of servitude worse than that from which they have been emancipated—a condition which will be slavery in all but its name.

The amount of registered stock issued by the State is \$21,996,398; do. of coupon bonds, \$12,973,000. Since January 1, 1865, \$269,822 of interest had been paid on the registered stock. With the exception of some parcels, the property which had been taken and held by the Federal Government as abandoned, was given up to the owners.

At the municipal election in Richmond, on July 28th, the Mayor, Attorney, and Superintendent of the Poor elected were persons who had held commissions in the Confederate army. An order was issued by Maj.-Gen. Turner forbidding an organization of the Common Council. The obnoxious persons declined. No meeting was, however, allowed until it became necessary to prepare for the State election, when a quorum was allowed to meet. By the retirement of certain members the objections of Gens. Terry and Turner were removed, and the Council allowed to enter upon its duties.

The freedmen in the State come under the charge of the Freedmen's Bureau, and with the exception of a few local disturbances, the course of affairs was so similar to that in other Southern States, that it is unnecessary to repeat them.

Desolated as Virginia had been by the war, no State has manifested more prompt and sincere acquiescence in the result. Without reservation or reluctance, the State has assumed all the responsibilities, burdens, and other duties imposed upon her by the new situation. The State government, established by a handful of votes in the border counties, was honestly and cordially sustained; and Governor Pierpont suddenly found himself with a jurisdiction and a population almost as extensive as the largest States in the Union.

VIRGINIA, WEST. This State shared the general prosperity of the northern States, as is evident from the favorable condition of its finances, the treasurer's and auditor's reports showing a large balance in the treasury, notwithstanding that nearly \$2,000,000 had been expended for bounties during the war. During the same time, according to the report of the adjutant-general, 31,884 men were furnished to the Federal armies.

A movement was set on foot in Virginia with

a view to bring about a reunion with West Virginia, and measures looking to that end were taken into consideration by the Virginia Legislature. The subject was referred to a committee, the minority of which, in a report that exhibited the feeling on the question in the minds of a large portion of the people, said substantially, that whatever mortification and regret the people of Virginia had experienced at the dismemberment of the Commonwealth, they had the consolation of knowing that it was by no act of theirs this "ungrateful deed" had been accomplished; that West Virginia had had no cause to complain, and that she could point to no improvement or advantage enjoyed or position attained for which she was not more or less indebted to her "impoverished mother." The report appealed to statistics to sustain the assertion that "for a long series of years, some, if not many of the counties now composing West Virginia, were unable to pay the cost of their organization and representation, but were aided, fostered, and sustained, and made all that they now are, by a people who, in every vicissitude and under all trials, have shown themselves the most generous and magnanimous ever known." The report argued that as West Virginia was now a free and independent State, "in the full and successful exercise of all the functions, organization, and representation in her State Legislature, as well as in the Federal Congress," the proposition was not timely; that "an impoverished people, divested of a large portion of their rights and privileges, ignorant alike of their present position and future condition, should earnestly invite her to share their fallen state, gloomy prospects, and uncertain fate." "If the position and condition of the two States were reversed," the report continued, "then might Virginia, without any loss of self respect or descent from the dignified position she has always sustained, and in accordance with that noble philanthropy, disinterested friendship, and generosity which have always been characteristic of her people, invite back and with outstretched arms receive the wayward daughter." The report concluded by recommending the adoption of the following resolution:

Resolved by the General Assembly of Virginia, That it is inexpedient at this time to legislate upon the subject of a reunion between West Virginia and Virginia; but whenever the people of the former State shall, through the constituted authorities, manifest a disposition therefor, then will Virginia be prepared to consider any overtures which may be made.

Governor Boreman, in his message to the Legislature in January, 1866, said, in relation to the enforcement of the oath of loyalty embodied in the Constitution of the State:

After the war ended and peace was being restored, I entertained the hope that I would be able at this session of the Legislature to recommend the modification of the more stringent laws in regard to the election and qualification of officers; but after what has transpired at the first and only election held since the close of the war in the localities where dis-

loyalty had most prevailed, I cannot make such recommendation. On the contrary, I now think it the duty of the Legislature to so amend these laws that their execution may the more certainly be secured. And to this end I recommend, first, that you provide for a registry of voters as authorized by the Constitution, article 3, section 12; second, that you declare distinctly that all officers of election shall take the oath of office prescribed by the act of November 16, 1863, and, if they fail to do so at any place of voting, that the vote where such failure occurs shall be void and shall not be counted; third, that you require all the county and the principal township officers to qualify before the Circuit Court of the county, or the Judge thereof in vacation. These amendments, it seems to me, will insure the purity of elections, and the due and proper enforcement of the laws. And in order that there may be no failure in the administration of the laws where a person is elected who cannot qualify, and, at the same time, frequent elections may be avoided, it may be proper to amend the law so that vacancies may be filled until the succeeding annual election, instead of holding special elections as now provided by law; and that the vacancies in the principal township offices may be filled, as many county offices now are, by the Circuit Court, or the Judge in vacation.

Referring to the conduct of returned Confederates in the border counties at the fall elections, he condemned severely those who, knowing themselves disqualified, sought positions which they could not fill, in order to retard civil organization, and who, by their example and counsels, induced a general disregard of law in the conduct of the elections. In regard to the colored people the Governor affirmed their inalienable right to protection of person and property, but declared that these would not be secure till negroes were made competent witnesses. He

recommended that the bronze statue of Washington, captured by General Hunter at Lexington, in 1864, be at once restored to the State of Virginia.

A growing interest was felt in the cause of education. "The people," says the State Superintendent, "are clamoring for schools and school houses." The greatest obstacle to the school system was the want of suitable rooms and grounds. The number of children in the entire State between the ages of six and twenty-one was 84,418. In the twenty-two counties in which the school system was in full operation, there were 63,458 children between those ages, of whom 15,972 attended school; there were 133 school houses, of which the average value was \$303, but excluding the eight schools in Wheeling, less than \$63; the number of teachers was 887, at an average salary for those in Wheeling of \$139 per month, and \$43 per month for females, while in the other districts it was only \$34 for males, and \$23 for females—salaries, says the State Superintendent, "totally insufficient to secure the services of first-class teachers." The total amount of the irreducible school fund, on the 1st of October, was \$106,122.78.

An election for members of the Legislature and local officers was held on the 26th of October. The result was that the Legislature stands as follows:

	Senate	House	Joint ballot
Republicans	19	43	67
Democrats	1	8	9
Republican majority ..	18	40	58

W

WALDECK, the name of a German principality. Prince, Georg, born January 14, 1831; succeeded his father May 15, 1845. Heir apparent, Prince Friedrich, born January 20, 1865. Area, 466 square miles. Population, in 1864, 59,143, nearly all of whom belong to the Lutheran Church. The Constitution of 1852 provides for a Legislative Assembly of 41 members, separately elected by the nobility, the towns, and the rural districts. Contingent to the Federal army, 866 men. Revenue in 1865, 511,801 thalers.

WAYLAND, FRANCIS, D. D., LL. D., an American Baptist clergyman and author, for thirty years President of Brown University, born in the city of New York, March 11, 1796; died in Providence, Rhode Island, September 26, 1865, of paralysis. His father, a Baptist clergyman of considerable ability, was settled as a pastor, first in New York City, afterwards at Poughkeepsie and Saratoga Springs. The family removed to Poughkeepsie, where Francis was placed at the academy, and pursued his classical studies under the late Daniel H. Barnes. In 1813, when only seventeen years old, he graduated with honor at Union College, and

showed, even at that early age, a marked predilection for metaphysical and economic studies. Immediately after graduating, he entered the office of Dr. Eli Burritt, of Troy; and, after three years of medical study, was licensed to practise his profession. During his medical course, however, he felt called upon to consecrate his life to the Christian ministry. He spent a year in the seminary at Andover, and in 1817 was induced to accept a tutorship in Union College. He continued his theological studies, and mingled with them the study of several branches of literature and science. He remained here four years, taught in nearly every department of college instruction, and acquired much of that diversified culture which distinguished him in after life.

In August, 1821, he was ordained, and settled as the pastor of the First Baptist Church in Boston, and resigned his position in 1826, to accept the professorship of mathematics and natural philosophy in Union College. Soon after he had entered upon his duties here, he was elected President of Brown University, and was inaugurated February, 1827. The circumstances in which he found the college were by

no means favorable. It was scantily endowed, had little apparatus, and a small library. He soon reduced the affairs to order; and Brown University became remarkable for the exemplary behavior of its students and its high standard of instruction. "Its departments of instruction," it is said, "were but imperfectly organized; and, in addition to his own proper work, he taught whatever there was no one else to teach. For several years he held the reins of discipline entirely in his own hands, and, both by day and by night, watched over the students with truly parental care. He did not care especially to make the college popular, as it is called; but he labored most earnestly to render it a school of thorough discipline and of sound education." The result of such assiduous labors and a management so skilful was most happy. The library rose to a respectable rank, and a permanent endowment of \$25,000 was secured for it. Its increasing size required ampler accommodation; and Manning Hall, with its fine library and chapel-rooms, was erected. The new president's house and Rhode Island Hall were erected; and, on Dr. Wayland's earnest appeals, the endowment of the university was considerably increased. Yet, with all these evidences of success, Dr.* Wayland's ideal of a university was not reached. The number of students did not increase, but actually diminished, and the annual expenses had become greater than the annual receipts. He investigated with great care the existing system of collegiate instruction in the United States; and, becoming satisfied that a radical change in some of its features was demanded, gave expression to his views in a little volume published in 1842, entitled "Thoughts on the Present Collegiate System of the United States."

In 1849, despairing of any decided improvement while the existing system was retained, Dr. Wayland resigned the presidency. The corporation, unwilling to release him, asked if he could not be prevailed on to remain in office. In reply, he stated freely the reasons of his resignation, and suggested such changes as he believed essential for the largest usefulness of the university. The experiment was tried, and proved reasonably successful. An endowment fund of \$125,000 was raised by subscription in four months, and the university commenced the year 1850-'51 under the new system. During the second term of that year the number of students increased to 195, and from that time to the date of Dr. Wayland's resignation the average was 249. On the 21st of August, 1855, his resignation was again sent to the corporation; this time not from any discouragement in regard to the condition of the university, for it was enjoying a higher degree of prosperity than at any former period, but from the state of his health. It was accepted with regret, and only from the conviction that it

was indispensable to the preservation of his life. He was accustomed for many years to preach to the students every Sabbath; and his sermons, though not marked by the graces of oratory in their delivery, were replete with sound and vigorous thought. For two or three years he preached with great acceptance in the First Baptist Church in Providence. But his great work, so far as his relations to education were concerned, was the preparation of his textbooks. For eight years after he entered upon the presidency, he taught moral philosophy by lectures and discussions. Having, by this long course of study, settled fully the great principles of the science, he gave his "Elements of Moral Science" to the public in 1835, and for thirty years it has continued to be a standard work.

In 1837 his "Elements of Political Economy" was published, and though meeting with less universal success than his preceding work, as was to be expected from the diversity of views on the subject, and its connection with partisan warfare, it has enjoyed a high degree of popularity. It is marked by the same clearness and precision of thought characteristic of his Moral Science. His "Elements of Intellectual Philosophy," though its substance had been given to many successive classes in the lecture-room, was not published till 1854. Here he was treading upon difficult ground, and, amid conflicting systems, could hardly hope to satisfy all. His aim was to give a clear and impartial as well as comprehensive view of the elements of metaphysics, and he was remarkably successful. His other published works were—"University Sermons" (1838), subsequently enlarged and published under the title of "Salvation by Christ" (1838); "Limitations of Human Responsibility" (1840); "Life of Rev. Adoniram Judson, D. D.," 2 vols. (1853); "Notes on the Principles and Practices of the Baptists" (1856); "Occasional Discourses" (1858); "Sermons to the Churches" (1858); "Letters to the Churches on the Ministry of the Gospel" (1863); "a Memoir of Thomas Chalmers, D. D." (1864). He also held a written discussion with Dr. Richard Fuller in 1844, and the letters of both parties were published in 1845, under the title of "Christianity and Slavery." His labors in the cause of education were not confined to his own university; they were co-extensive with the limits of the world. In his own State, the efforts for educational reform in the public schools found in him a zealous and efficient leader. In the founding of colleges and theological seminaries, in the promotion of a higher and more truly liberal education among clergymen, and in the establishment of training-schools in the mission stations in foreign lands, he was always an efficient helper. The affection and esteem in which he was held by the people of the gallant little State of which for thirty-eight years he had been a resident, were high evidence of his moral worth. Of all her citizens, there was none whom Rhode Island more delighted to honor, none who would have been

* He received the degree of D. D. from Union College in 1827, and from Harvard University in 1829. The latter institution conferred on him the degree of LL. D. in 1852.

more heartily welcome to any gifts she had to bestow. More than once he was urged to allow himself to be nominated for United States Senator; and had he consented, he would have been elected by acclamation. Such honors as he would accept, the State heaped upon him. He was the chosen counsellor in all her educational matters; director and president, if he would serve, in her hospitals, asylums for the insane, and her reformatories; an inspector of her prisons, in which he regularly taught a Bible-class of prisoners, and often preached; president of the Society for Aiding the Poor, and an officer in nearly every social charity of the city, and the counsellor and friend of every one who went to him in perplexity and anxiety. His death was sudden and unexpected. He had overtasked himself in the final revision of his "Elements of Moral Science," while suffering from a heavy cold: on the 26th of September, 1865, he was smitten with paralysis, and survived four days, without return of consciousness.

WILKINS, Hon. WILLIAM, an American statesman and diplomatist, born in Eastern Pennsylvania, in 1779; died at his residence in Homewood, near Pittsburg, June 23, 1865. He removed to Pittsburg in boyhood, where he was educated, and in 1810 was president of the Pittsburg Manufacturing Company, the duties of which office he sustained with ability and judgment. Subsequently, upon the transformation of this institution into the Bank of Pittsburg, he became its president, but in 1819 resigned for the purpose of entering the Legislature. Mr. Wilkins represented the county twice in the Legislature, and whatever diversity of opinion may be entertained as to his political views, it cannot be denied that he exhibited fine powers of debate and great aptitude for the details of business. From this time his public life began. He was a Senator in Congress from 1831 to 1834; a Minister to Russia in 1834; a Representative in the lower House of Congress from 1843 to 1844, and during the latter year was appointed Secretary of War, on the 15th of July, by President Tyler. John C. Calhoun was at that time a member of the Cabinet, as Secretary of State. Mr. Wilkins was on board the U. S. ship Princeton when the "Peacemaker" exploded and Secretary Upshur was killed. Mr. Wilkins also filled most creditably the office of Judge of the U. S. District Court for the Western section of Pennsylvania. In 1847, in conjunction with Mr. Thomas Bakewell and John Harper, he founded the Western Pennsylvania Hospital. Mr. Wilkins was a man of clear and vigorous intellect, and was ever equal to the responsibilities of professional or official station. Frequently engaged with all the ardor of a strong nature in political discussions, he was honorable and fair in his deportment toward his political opponents. For some time previous to his decease his health had been impaired in consequence of a fall.

WISCONSIN. The political canvass of this State commenced in September. On the 6th the Republican Convention met at Madison and nominated a full State ticket, headed by the name of Lucius Fairchild as candidate for Governor. Two reports were made by the Committee on Resolutions. That of the minority declaring that the seceding States should be compelled, as a condition precedent to readmission to their privileges in the Union, to adopt constitutions which "make no discrimination as to right of suffrage on account of color," was laid on the table; and the majority resolutions, reported by Senator Doolittle, were adopted. The following are the most important of those:

Resolved, That while we welcome the cessation of war in the Southern States, we do not close our eyes to the fact that a large portion of the whole population are fresh from acts of hostility toward the Government and toward its institutions, are still unsettled in opinion, and many of them unreconciled to the results of the contest in which, for more than four years, they have been engaged. We rejoice to be assured that the Government will not withdraw from these States the strong arm of military power until it has full and satisfactory evidence of such a spirit of true and permanent loyalty as to make them safe participants in the right of self-government, insure obedience to the Constitution and laws, acquiescence in the emancipation of the slaves, and protection to the freedmen in the right to enjoy the fruits of their labor, as well as security of them against unlawful violence and persecution.

Resolved, That, in the opinion of this convention, it is due to equal justice and to the altered condition of things, that the Constitution of the United States should be so amended as to make the representation of each State in the House of Representatives proportionate to the number of legally qualified male electors in such States.

Resolved, That we recognize in the administration of President Johnson substantially the same policy toward the people of the Southern States as that inaugurated by President Lincoln; that while he has fixed terms of reconstruction with the spirit of liberality and kindness, he, nevertheless, has evinced a determination to arrest the abuse of political power, wherever exercised for disloyal purposes; and that we believe he will so control and direct the work of reconstruction as will eventually restore the Union entire, and secure them all the rights to which they are entitled under a free and enlightened Government; and that we pledge to him, in the great work of restoring civil government in those States upon that basis, our hearty and unanimous support.

The Democrats assembled at the same place on the 20th, and nominated for Governor, Brig.-Gen. Harris C. Hobart, and a full ticket of State officers. In an address to the Convention, Gen. Hobart announced that he was opposed to a high tariff, and favored impartial taxation, and the doctrine that Africans should not vote, although he was willing that they should hold property, be witnesses in courts of law, and be educated. He praised warmly President Johnson's reconstruction policy, and declared his belief that a continuation of the present military policy in the South would lead to hostility and possibly to a renewal of the war. Resolutions were adopted endorsing the President's policy of restoring the Union on the

basis of the Federal Constitution, and pledging him unqualified support therein; opposing negro suffrage in the State of Wisconsin, or interference with it in other States; opposing the suspension of the writ of *habeas corpus*; and favoring the most rigid economy in the expenses of the Government, and a strict equalization of the tax burden.

The chief interest of the election turned on the question of amending the State Constitution by extending the suffrage to negroes, which the Legislature had referred to the popular vote. The failure of the Republican Convention to endorse this policy was supposed to presage its defeat, notwithstanding the party was decidedly in the ascendant in the State.

The election took place on November 7th, with the following result for Governor:

L. Fairchild, Republican.....	53,882
H. C. Hobart, Democrat.....	43,380

Majority for Fairchild..... 10,002

The other Republican candidates for State offices received majorities about as large as this. The election for members of the Legislature resulted as follows:

	Senate.	House.	Joint Ballot.
Republicans.....	23	67	90
Democrats.....	10	38	48
Republican majority.....	13	34	47

The negro suffrage amendment was lost by the decisive vote of 55,591 against it, to 46,588 for it; majority against the amendment, 9,000. The Republican majority for State officers was thus nearly reversed, showing that upwards of ten thousand voters of that party cast their ballots against the measure. But notwithstanding this result, the right of colored men to vote was subsequently established by other means, the Supreme Court of Wisconsin having recently decided that in 1848 the people ratified an amendment conferring the right of suffrage upon this class of the population. It appears that at the election held that year such an amendment was submitted to the people, and a majority voted for it; but, as the Constitution required a "majority of all the votes cast at such election," it was declared by the canvassers that, as a majority of those who had voted for State officers had not voted for the amendment, it had failed. The Supreme Court has decided that this was erroneous, and that the amendment was adopted, and that therefore negroes are entitled to vote in Wisconsin.

The public debt of Wisconsin at the commencement of 1866 amounted to \$2,664,550, which is an increase of about one hundred and fifty thousand dollars over the debt of the previous year. Almost the entire amount was incurred by expenses growing out of the late war, and will doubtless be cancelled when the war claims of the State against the General Government come to be settled. The total number of men furnished by the State to the national armies was 96,118, who enlisted for

periods varying from three months to three years. Reduced to a three years' standard, her contribution to the war for the Union was 78,985 men. The excess of men over all calls exceeded one thousand, and the total number was equal to one-half of the voting population.

Early in 1866 the lands, water-powers, and other property of the "Fox and Wisconsin Rivers Improvement Company" were sold by the trustees on behalf of the State, to meet the State indebtedness and the cost of completing the improvement. The sale produced an amount deemed sufficient for both of these objects, the latter being of more than local interest and importance. The opening or enlargement of any avenue for the traffic of the Northwest, which already chokes every existing outlet, concerns the Eastern States quite as much as the region more immediately interested, and this water-channel between the Mississippi and the lakes promises in a few years to become a most valuable feeder to Eastern trade. A debt was thus extinguished, which has been called a part of the State debt, because the evidences of it were issued by State authority, although the State assumed no other responsibility for it than to pledge the application of the revenue of the works to the payment of the principal and interest. The original plan, adopted by Wisconsin in 1849, for the improvement of the Fox and Wisconsin Rivers, contemplated locks thirty-five feet in width and one hundred and forty feet in length. In 1856 the locks were required to be lengthened to one hundred and sixty feet, and the canals to be enlarged in depth and width. This latter plan is nearly consummated, and from the proceeds of the late sale enough money, it is said, has been realized to prepare for the speedy passage of boats and barges of a moderate size and capacity from the Mississippi to Lake Michigan at Green Bay. An enlargement sufficient to pass any of the Upper Mississippi boats is urged by the Wisconsin journals, as a measure worthy of national encouragement and subsidy.

From official statistics, published by the Secretary of State, it appears that in 1864 there were in Wisconsin eight lines of railroad, with an aggregate length of track in the State of 1,631 miles. The number of through passengers carried during the year was 280,205, and of way passengers 1,622,688½; the total amount of freight carried was 1,892,076 tons, and the proceeds for carrying freight and passengers amounted to \$18,183,568.29. There is no statement of the total expenses of the companies, only from declared dividends. There were seventeen passengers and twenty-one employes reported killed, and eleven passengers and three employes injured, mainly by their own carelessness.

From the annual report of the Superintendent of Public Instruction for the year ending August 31, 1865, the following statistics are obtained:

Whole number of children over four years and under 20 years of age	883,593
Number of different pupils who attended the public schools	223,987
Number of days' attendance of different pupils in the public schools	14,681,167
Average number of days the schools were taught	184½
Per cent. of attendance of number registered	50
Per cent. of attendance of number registered entitled to school privileges	88
Number of different persons employed as teachers	7,582
Average wages of male teachers per month	\$36 45
Average wages of female teachers per month	\$22 24
State fund apportioned	\$151,316 84
Total amount expended during the year and on hand August 31st	\$1,035,101 88

During the year covered by this report there were 2,222 male teachers and 5,310 female teachers employed in the public schools, and 11,948 more pupils in attendance than in 1864. The whole number of pupils was sixty-six per cent. of the whole number of persons over four and under twenty years of age in the State. The number less than four years of age, who have been registered, is 1,252. The number over twenty years of age, who have attended school, is 1,523. There was raised by tax for school purposes \$2.70 for each child over four and under twenty years of age, and \$4.07 for each child registered as a member of public schools. The number of school houses is 4,338, valued at a million and a half dollars, and accommodating 241,595 pupils. The demand for teachers is at present greater than the supply. Hundreds of persons possessing limited attainments are employed, not because the people are indifferent to their qualifications, but because the school houses would be unoccupied unless these were employed.

The productive portion of the school fund is given as follows:

Amount due on land sold on certificates	\$675,037 11
Amount due on mortgages	239,123 75
Amount due on certificates of State indebtedness	897,000 00
Amount due on State bonds	108,700 00
One quarter of the Normal School fund	146,645 46
Total	\$2,118,506 32

which is less than the amount in former years, the decrease being due, according to the Superintendent, to the worthless security that loans were based upon during the first ten years of the administration of the fund.

WISEMAN, NICHOLAS PATRICK, an English Roman Catholic clergyman, Cardinal Archbishop of Westminster, born in Seville, Spain, August 3, 1802; died at his residence York Place, London, February 15, 1865. His father's family were of English origin, and his mother's Irish. When five years of age he was taken to England by his mother, by whom he was placed in a boarding-school at Waterford, and, subsequently, entered the college at Ushaw, where, for nearly eight years, he applied himself closely to his studies, laying the foundation for that profound and varied erudition which gave him such distinction in after life. In December, 1818, he went to Rome as a student of the English College, then but recently established. At the age of twenty-two years

he was graduated D.D.; in 1825 was appointed to the priesthood, and two years after was chosen Professor of Oriental Languages in the Roman University, at which time he was also Vice-Rector of the English College. On the elevation of Dr. Gradwell to the episcopate, and his consequent return to England, Dr. Wiseman succeeded him as rector of the college in 1828. This appointment, and the passing of the Catholic Relief Act at the time, may be said to have determined the future career of the eminent divine. At this period, notwithstanding the pressure on his time, and the many demands upon his energies, he wrote his *Horæ Syriacæ*, chiefly drawn from Oriental MSS. in the Vatican Library. Returning to England in 1835, he soon became celebrated as a preacher and lecturer, and in Lent of 1836 delivered at St. Mary's, Moorfields, a course of lectures on the principal doctrines and practices of the Catholic Church, which were afterwards printed and passed through many editions. These volumes were speedily followed by his "Treatise on the Holy Eucharist," which occasioned the celebrated controversy with the Rev. Dr. Turner, afterwards Bishop of Ely. This work was quickly followed by Dr. Wiseman's "Lectures on the Connection between Science and Revealed Religion." It has passed into several editions and as many languages, and it is held in such esteem as to form a text-book on the very important subject with which it so ably deals. After this he made another visit to Rome, where he remained for a short time, and, it is said, was mainly instrumental in inducing the then Pope (Gregory XVI.) to increase the Vicars Apostolic in England. Dr. Wiseman, shortly after, returned from the Eternal City as Coadjutor Bishop to Dr. Walsh, of the Midland district. He was also appointed President of St. Mary's College, Oscott. In 1847 he again visited Rome, on matters in reference to the Catholics of England, and, it is believed, to consult with the Pope on the subject of the important changes which were subsequently made. On the death of Bishop Griffiths, in 1848, Dr. Wiseman became Pro-Vicar Apostolic of the "London district," and was soon afterwards nominated coadjutor to Bishop Walsh, on that prelate being translated to London. On the death of Dr. Walsh, in 1849, Dr. Wiseman became Vicar-Apostolic. During the time that elapsed from his second visit to England up to his succession in 1849, great changes in religious opinions had taken place, and within the very centres of the two great Universities of Oxford and Cambridge the preachings and writings of Dr. Wiseman were operating. On the 6th of August, 1850, Dr. Wiseman was summoned to Rome by the present Pope, who, on the 29th of September in that year, issued his apostolic letter reestablishing the English Catholic hierarchy. At the same time his Holiness issued a brief elevating Dr. Wiseman to the archiepiscopal dignity, and, in a private consistory held

the following day, the new archbishop was raised by the Sovereign Pontiff to the dignity of Cardinal, by the title of St. Pudentia. Cardinal Wiseman was the seventh English Cardinal since the Reformation. Violent opposition was shown at first to this action of the Pontiff, but it soon subsided. The Cardinal's talents were of the highest order, and he was acknowledged as one of the first scholars in Europe. He was acquainted with most of the European languages; was well skilled in Hebrew and the Oriental tongues; a great Biblical scholar, a judicious critic, and a proficient in almost every branch of science. His works were numerous. Since his elevation to the cardinalate, three volumes of his contributions to the "Dublin Review" have been published, under the title of "Essays on Various Subjects." He has also written a tale entitled "Tabiola, or the Church of the Catacombs," which has been translated into several languages; "Recollections of the last Four Popes, and of Rome in their Times" (1858); a volume embodying lectures, sermons, and speeches delivered during a tour in Ireland (1859); "Rome and the Catholic Episcopate" (1862); "Essays on Rome, Ancient and Modern;" and a number of other sermons, lectures, etc. In the autumn of 1858 he visited Ireland, where his journeys were so many ovations, and his presence was hailed with affectionate veneration and acclaim.

WORCESTER, JOSEPH EMERSON, LL. D., an American lexicographer, geographer, and statistician, born in Bedford, N. H., August 24, 1784; died at Cambridge, Mass., October 27, 1865. He was the descendant of an old and influential family which had lived at Hollis, N. H., since 1750. His early education was obtained chiefly at Hollis, to which his parents removed soon after his birth, and at Phillips' Academy, Andover, Mass. He graduated at Yale College in 1811, and for several years afterwards taught school in Salem; and while here, prepared the greater part of his "Geographical Dictionary, or Universal Gazetteer," published at Andover in 1817. The following year he published his "Gazetteer of the United States" at the same place. In 1819 he removed to Cambridge, Mass., and the same year published his "Elements of Geography, Ancient and Modern;" in 1820, "Epitome of Geography;" in 1823, "Sketches of the Earth and its Inhabitants;" and in 1826-'28, "Elements of History, Ancient and Modern," "Epitome of History," and "Out-

lines of Scripture Geography." Dr. Worcester's first effort in the field of English lexicography was "Johnson's English Dictionary as improved by Todd, and abridged by Chalmers, with Walker's Pronouncing Dictionary combined," brought out in 1827, from which time he devoted most of his attention to this department of literature. In 1828, while engaged upon his "Comprehensive Pronouncing and Explanatory Dictionary," he was induced by the publisher of "Webster's American Dictionary" to prepare an abridgment of that work. From 1830 to 1881 he visited Europe, where he collected many valuable philological and lexicographical works. Subsequently he published a "Universal and Critical Dictionary of the English Language" (1846); a "Pronouncing, Explanatory, and Synonymous Dictionary" (1855); "A Dictionary of the English Language," his greatest work (1860); "Spelling-Book of the English Language;" and "Remarks on Longevity." He was also the literary editor of the "American Almanac" from 1831 to 1848 inclusive. Dr. Worcester received the degree of LL. D. from Brown University and from Dartmouth College, and was made a member of most of the scientific and literary societies in this country.

WURTEMBERG, a kingdom in Germany. King, Karl, born March 6, 1823; succeeded his father June 25, 1864. The Constitution of September 25, 1829, gives the legislative power conjointly to the king and a Diet (Landtag), consisting of two Chambers. The Upper Chamber consists of the royal princes, the heads of the principal noble families, and a number of members appointed by the king for life (such members not to exceed one-third of the house). The second Chamber consists of 13 members of the nobility; 6 superintendents of the Protestant Church; 1 Roman Catholic Bishop, and two other representatives of Roman Catholic bodies; the chancellor of the University of Tübingen, and 71 deputies of towns and rural districts. The area of the kingdom is 7,840 square miles. The population, in 1864, was 1,748,328, of whom 1,200,863 were Protestants; 2,661 Protestant dissenters; 538,694 Roman Catholics; 4,610 Jews. The capital, Stuttgart, contained, in 1864, 69,084 inhabitants. The revenue for the financial period from 1864 to 1867, was 51,226,785 florins; surplus of revenue over expenditures, 34,077 florins. The army consists of 28,786 men.

Y

YTTRIUM, AND THE SUPPOSED ERBIUM AND TERBIUM. M. O. Popp has investigated (1864) the rare earth, yttria; and he is led to conclude that the supposed bases, *erbia* and *terbia*, contained along with yttria proper and with small portions of the alkalis and lime in this mineral,

are in reality identical with the oxides of cerium and didymium. Carbonate of baryta, providing the cerium be present as a sesqui-oxide, precipitates from solution all the bases except yttria proper. The latter is obtained, after separate precipitation and ignition, in form of a

heavy powder, which, if pure, is of a yellowish white. Yttria is a strong base. Its crystalline hydrated salts have all a pale rose color.

The metal, obtained by reduction from a chloride with sodium, appears when dry as a blackish-gray powder: its equivalent is given by Popp as 84. It oxidizes in water, and more rapidly on boiling. Heated on platinum foil, it burns with an intense light—the color not so pure a white as that afforded by magnesium or aluminium, but inclining to reddish. This metal, in fact, shows much analogy with magnesium, as also do its compounds with those of the latter. The author, of course, concludes that the supposed elements, *erbium* and *terbium*, have no real existence. (Original paper in *Ann. der Chem. und Pharm.*, lv. 179.)

M. Marc Delafontaine, on the contrary, has contributed to the *Archives des Sciences*, etc., Geneva, an account of his researches on the yttria bases—a translation, entitled "On the Metals in Cerite and Gadolinite," appearing in the *Chemical News*, April 7, 1865, etc.,—in

which, while alluding to Popp's results, then just published, he maintains the opposite view. He briefly recounts how M. Gadolin in 1794 extracted the impure earth *yttria* from the peculiar black mineral (Gadolinite) of the Ytterby quarries; while subsequently, out of, or as associated with this earth, Ekeberg, in 1802, separated the metal *glucinum*; Berzelius, in 1815, *cerium*; Mosander in 1839, *lanthanum* and *didymium*; and the same chemist, in 1843, as he supposed, *erbium* and *terbium*. M. Delafontaine considers at length the chemical reactions and physical qualities of compounds accredited to the last two, and of those of yttrium and the other associated metals, besides presenting the spectrum of erbium, terbium, and didymium; and he unhesitatingly decides that erbium and terbium are distinct bodies and true elements. He regards the earthy bases of these two metals as protoxides, their formulæ being thus, ErO and TrO . Calling that of oxygen 16, the equivalents of these metals are found by him as, respectively, 95 and (nearly) 91.

INDEX OF CONTENTS.

ADAMS, CHARLES FRANÇOIS.—Letter to Earl Russell in relation to the Shenandoah, 811-818; second letter, referred to as an answer to Clarendon, 815-819.

Africa.—Expectations of the French, 1; outbreaks in Algeria, 1; defeat of the Hamian tribes, 1; Louis Napoleon visits Algeria, 1; decree of the French Government respecting Algeria, 1; commerce of Algeria, 2; insurrection in Morocco, 2; progress of the Suez Canal, 2; Abyssinia, 2; affairs in Madagascar, 2; South Africa, 2; Cape Colony, 2.

Agriculture.—Prosperity of the year, 2; drought, 2; cereal crops, 2; decrease, 3; rye crop, 3; barley do., 3; oat do., 3; hay do., 3; corn do., 3; cotton do., 3; tobacco do., 3; potato do., 4; sorghum do., 4; buckwheat do., 4; fruits, 4; grape crop, 4; wool and sheep, 4; hogs, 4; live stock in 1864-'65, 5; exports of agricultural products, 5; result of the grape crop, 5; hop culture, 5; New England district, 6; mode of cultivation, 6; hops, how picked, 7; drying, 7; baling, 8; the hop louse, 8; origin, 8; first attack, 8; multiplication, 8; effects of atmospheric changes, 8; enemies of insects, 9; the mould, 9; a disease, 9; causes, etc., 9.

Alabama.—Spirit of the people at the commencement of the year, 9; resolutions, 10; attack on Mobile, 10; raid of Gen. Wilson, 10; militia of the State, 10; reasons for further opposition, 10; desolation in the State, 10; Wilson's raid, 11; proclamation of President Johnson, 11; do. relative to Alabama, 11; Parsons appointed Provisional Governor, 11; duties, 12; losses of the State, 12; proclamation of Gov. Parsons, 12; how received, 13; State Convention assembled, 13; organized, 13; action relative to the election of State officers and members of Congress, 14; ordinance relative to the institution of slavery, 14; debate in the Convention, 14; ordinance relative to acts of the State Legislature, 15; debate on important points, 15; condition of the finances of the State, 16; ordinance of secession, 16; majority and minority reports of the committee on, 16; debate, 16, 17; its repeal, 17; other ordinances adopted, 17; the war debt declared void, 17; adjournment of the Convention, 17; State officers elected, 17; Legislature convenes, 17; message of Gov. Parsons, 17; on the proceedings of the Convention, 18; destitution, 18; State debt, 18; battle-flags, 18; State officers chosen by the Legislature, 18; amendment to the Federal Constitution adopted, 18; other acts of the Legislature relative to freedmen, 19; inauguration of Gov. Patton, 19; his address, 19; losses of the State by the war, 19; emancipation, 19; despatch

from Washington relieving the Provisional Governor, 19; do. to Gov. Patton, 20; freedmen Convention in August, 20; do. in November, 20; difficulty between Bishop Wilmer and the military authorities, 20, 21.

ALLEN, PHILIP.—Birth, 21; career, 21; death, 21.

America.—Close of the war in the United States, 21; reconstruction, 21; emancipation, 21; British American Confederation, 21; war in Mexico, 21; Juarez, his term of office, 22; Dominicans, success of, 22; Jamaica, disturbances in, 22; difficulties between Spain and Peru, 22; do. with Chili, 22; insurrection in Uruguay, 22; Paraguay declares war, 22; Brazil, war with Paraguay, 22; Congress of South American States, 22; alliance formed, 22.

Anglican Churches.—Statistics of, in United States, 23, triennial Convention, 24; question of reunion with Southern dioceses, 24; bishops from the South present, 24; admission of, 24; proceedings of the Convention, 25; resolution for a day of thanksgiving, 25; vote on, 25; lost, 25; division of the diocese of Pennsylvania, 25; number of bishops increased, 25; Southern General Council, 25; proceedings, 25; Board of Missions, 25; reports from Mexico, 25; mission to West Africa, 26; Church of England, 26; Bishop Colenso, 26; Order of St. Benedict, 26; efforts for a closer union of the English and Russian Churches, 26; proceedings, 26; views of Dr. Pusey, 27; colonial bishoprics, 27.

Anhalt.—A duchy in Germany, 27; area, 27; population, 27; divisions, 27; receipts and expenditures, 27; debt, 27.

Argentine Republic.—Government, 27; constitution, 27; area, 27; provinces, 27; inhabitants of Buenos Ayres, 27; immigrants, 27; receipts and expenses, 27; army and navy, 27; invasion of Corrientes, 27; war, 27; alliance with Brazil and Uruguay, 27; results, 28.

Arkansas.—Reorganization of the State, 28; Legislature, 28; State Convention, 28; acts of the Legislature, 28; disfranchising act, 28; restoration of order, 28; members of Congress chosen, 28; despatch of President Johnson, 28; number of slaves formerly in the State, 29; aid rendered by the Freedmen's Bureau, 29; destitution of the people, 29.

Army, Confederate.—Decline of the numbers, 29; final surrender, 29; see *Army Operations*.

Army of the United States.—Available force at the beginning of the year, 30; the draft, 30; additional acts of Congress, 30; proclamation of the President, 30; opinion of the Attorney-General, 30; strength of the force

in May, 80; result of the December call, 80; payment of bounties, 81; aggregate quotas charged against the several States, 81; number of troops furnished by States, 81; do. under different calls, 81; reenlistments, 81; colored troops, 82; number in the service, 82; applicants for commissions in these organizations, 82; order suspending drafting and recruiting, 82; order reducing expenses, 82; proceedings, 88; rapidity of disbanding the army, 83; subsequent organization of the army, 84; another project, 84; forces in the service at the close of the year, 84; operations of the Paymaster's Department, 85; disbursements, 85; losses, 85; operations of the Quartermaster's Bureau, 85; supplies furnished during the year, 85; cavalry horses, 85; record of persons buried, 85; hospitals, 85; sea-coast defence, 86; Ordnance Department, 86; signal corps, 86; officers retained in the regular army, 86; do. volunteer officers, 87.

Army Operations.—Continued operations through the winter, 88; movements of Hood, 88; do. of Thomas, 88; Schofield sent to the Atlantic coast, 88; Thomas defends the country around Atlanta, 88; reconnaissance from Eastport toward Corinth, 88; captures, 88; deserters, 88; Hood's forces march across Georgia to oppose Sherman, 88.

No important movement by the Army of the Potomac meanwhile, 88; call for troops, 88; attack on the Federal fleet in the James, 88; report, 88; marching orders issued to the army before Petersburg, 88; movement by the left, 89; cavalry reach Dinwiddie, 89; the enemy driven beyond Hatcher's Run, 89; rally of the enemy, 89; contest which ensued, 40; Lee's report, 40; losses, 40; the advantage finally gained, 40.

Small expeditions in the Shenandoah valley, 40; capture of Gen. Crook and Kelly, 41.

The present field of decisive operations, 41; three States, 41; Sherman begins his march through the Carolinas, 41; movements of Gen. Hatch against the Charleston and Savannah Railroad, 41; movements of Gen. Slocum, 41; Sherman's instructions to officers, 41; advance of his army, 48; opposition of Wheeler, 48; his letter to Howard, 48; reply of Sherman, 44; retreat of the enemy, 44; movement on Orangeburg, 44; Edisto crossed, 44; march upon Columbia, S. C., 44; bridge opposite Columbia reached, 45; Columbia surrenders, 45; report of Sherman, 45; burning of cotton by Hampton, 45; burning of the city, 45; troops which first entered the city, 46; consequences of Sherman's movements, 46; Hardee evacuates Charleston, 46; movement of Gen. Hatch, 46; surrender of the city, 46; report, 46; property captured, 46; report on the first entrance to the city, 47; movements of Hardee, 47; Sherman continues his march, 48; Winnsboro' occupied, 48; Rocky Mount, 48; feint against Charlotte, 48; destruction of the railroad, 48; Sherman's letter to Hampton, 48; Hampton's reply, 48; repulse of Capt. Duncan, 49; Cheraw, 49; Chesterfield occupied, 49; property captured, 49; Fayetteville, N. C., 49; march upon, 49; its occupation, 49; retreat of Hardee, 49; report of Sherman on his position, 49; concentration of Confederate forces under Johnston, 49; messengers of Sherman, 50; success, 50; movements of Schofield, 50; advance upon Wilmington, 50; retreat of the enemy, 50; occupation of the city, 51; Schofield operates from Newbern against Goldsboro', 51; its capture, 51; further advance of Sherman, 51; movements of Howard, 51; do. of Kilpatrick, 51; do. of Slocum, 51; position of Hardee, 52; attack, 52; Averyboro', 52; advance of Slocum, 52; statement of Sherman, 52; orders to Schofield, 52; attack by Johnston, 53; loss at Bentonville, 53; Sherman reaches Goldsboro', 53; his plans, 53.

Grant's preparations for final conflict, 53; movement of Sheridan to join Grant, 54; advance up the Shenandoah, 54; Staunton occupied, 54; escape of Early, 54; expedition to Scottsville, 54; burning of bridges, 54; destruction of the canal, 55; Sheridan arrives at City Point, 55; takes a position on the left of Grant's army, 55.

The line of Grant's army, 55; attack by the enemy on Fort Steadman, 55; repulse, 55; loss, 55; Meade's congratulatory order, 55; indications of the weakness of Lee, 56; marching orders given to the army, 56; movement of the cavalry, 56; do. of the infantry, 56; cannonade at Petersburg, 56; operations beyond Hatcher's Run, 56; repulse of Warren's division, 56; reinforced and the ground recovered, 58; battle of Five Forks, 59; repulse of the enemy, 59; report of President Lincoln, 60; Lee orders the evacuation of Petersburg and Richmond, 60; surrender of Petersburg, 60; occupation of Richmond, 60; fire, 60; military governor appointed, 61; orders, 61; first entrance of the army into the city, 61, 62; further operations against Gen. Lee's army, 62; letters captured, 62; the pursuit urged, 63; correspondence between Grant and Lee, 64; surrender of Lee's army, 64; paroles of the officers and men, 65; numbers surrendered, 65; salutes ordered by the War Department, 65.

Stoneman's march from East Tennessee to North Carolina, 66; destruction, 66; Sherman advances from Goldsboro', 66; hears the news of Lee's surrender, 66; hurries forward against Johnston, 66; letter from Johnston, 66; Sherman's reply, 67; interview between Sherman and Johnston, 67; Sherman's report, 67; terms of surrender agreed upon, 68; rejected by the War Department, 68; reasons, 68; Sherman's report of his proceedings, 69; correspondence with Johnston, 69, 70; surrender of Johnston, 70; farewell to his army, 70.

Expedition of Wilson into Alabama, 71; battle at Plantersville, 71; Wilson moves eastward, 71; captures Selma, 71; Montgomery, 71; and Macon, Ga., 71; his report, 71.

Movements against Mobile by the army and navy, 71; capture of Spanish Fort, 72; retreat of Taylor, 72; advance of Steele from Pensacola, 72; occupation of Mobile, 72; surrender of Taylor's army, 72; surrender of naval vessels and officers, 73.

Order of Kirby Smith in Texas, 73; the last battle of the war, 73; surrender of Kirby Smith's army, 73.

Military occupation of the insurrectionary States by the Federal forces complete, 74; review of Grant's and Sherman's armies at Washington, 74; disbandment, 74; Sherman's farewell to his army, 74; Grant's farewell to the armies, 75; Presidential order relative to commercial intercourse, 75; prisoners of war, 75; disbandment of sanitary and Union organizations, 76; destruction of the gunboat Webb, 76; retreat of Mr. Davis, 77; his proclamation, 77; capture and imprisonment, 77; numbers surrendered in the Southern armies, 77; Federal force in the field, 77; how distributed, 78; suspension of drafting, 78; progress in mustering out troops, 78; rapidity, 79; military organization adopted, 79; departments and sub-departments, 80; list of battles and skirmishes of the war, 81-84; difficulty of knowing the number killed and wounded, 84; organization of the War Department, 85; general officers of the regular army, 85; do. of the volunteer army on January 1, 1865, 86-89; organization of the Navy Department, 90; rear-admirals of the navy, 90; list of commodores in the navy, 90, 91.

ASHLEY, JAMES M.—Representative from Ohio, 205; on reconsidering the vote on the joint resolution amending the Constitution, 206; on reconstruction, 246, 255-257.

Asia.—Most important events in 1865, 91; progress of Russia, 91; China, insurrection in, 91; British, with Bhootan, 91; Afghanistan, 91; advance of civilization, 91.

Astronomical Phenomena.—The field of practical astronomy enlarged, 91; general view, 92; measurement of arcs of parallel and of meridian, 98; parallax and distance of the sun and moon, 98; preparation for observing the transit of Venus in 1882, 98; Asteroids, 94; Saturn, 95; satellites, 95; the planetary system, 96; comets, 97; Southern celestial hemisphere, 97; parallax of minute stars, 97; Herschel's catalogue of nebulae, etc., 98; nebula, 98; astronomical works and memoirs, 99.

Atmosphere.—Auroras, 100; question of the height of the atmosphere, 100, 101; temperature, 102; relations of air to chemical composition, 103.

Austria.—Emperor, 108; area, 108; population, 108; debt, 108; army, 108; navy, 108; commerce, 108; Parliament, 108; speech of the Emperor, 108; Cabinet, 108; change of the fundamental law, 104; rescript of the Emperor, 104; how received, 104; relations with Hungary, 104; release of the Poles, 105; action relative to Schleswig-Holstein, 105; committee on the public debt, 105; decree relative to the press, 105.

B

Baden.—A duchy of Germany, 105; regent, 105; heir apparent, 105; Legislature, 105; area, 106; religious divisions, 106.

Baptists.—Numbers in the several States, 106; other denominations of Baptists, 106; anniversaries, 106; Southern societies, 106; unanimous in continuing their separation from the North, 106; General Assembly of Kentucky, 106; negro churches South unite with the North, 106, 107; Swedish mission, 107; do. to Hayti, 107; churches in England and Wales, 107; in Europe, 107; Burmah, 107.

Banks of the United States.—Synopsis of the condition of the National Banks at each quarter of 1865, 107; details of their condition on January 1, 1866, 108, 109; State and National Banks in each State, 110; national banking system of the United States, 110; number of banks in cities, 110; banks by States, 111; banks of Canada, 111.

Barometer.—Uses, 112; correction for temperature in the measurement of heights, 112; observations in the Arctic region, 112; the earth's rotation and the sun's distance, 113; aerial tides, 114; principal causes of barometric fluctuations, 115; a new water barometer, 115; self-registering barometers, 116; Hough's typo-barograph, 116.

BARTH, HEINRICH.—Birth, 118; pursuits, 118; character, 118; death, 118.

Bavaria.—The reigning sovereign, 119; constitution, 119; Legislature, 119; area of the kingdom, 119; population, 119; public debt, 119; army, 119.

Belgium.—King and heir apparent, 119; council of ministers, 119; area and population, 119; inhabitants in large cities, 119; budget, 119; public debt, 119; army, 119; imports and exports, 119; movements of shipping, 119; number and tonnage of ships, 119; accession of Leopold II., 119; inaugural address, 119; royal civil list, 120.

BELGIUM, LEOPOLD GEORGES CHRISTIEN FRÉDÉRIC, KING OF.—Birth, 120; military services, 120; marriages, 120; death, 120.

BENTON, THOMAS H.—Nominated for Governor of Iowa, 440.

BLISS, GEORGE.—Representative from Ohio, 205; on reconsidering the vote on the constitutional amendment, 203.

Bolivia.—President, 120; area and population, 120; army, 121; finances, 121; movements of shipping, 121; number and tonnage of ships, 121; revolutionary movements, 121; explorations, 282.

BOWMAN, ALEXANDER H.—Birth, 121; military services, 121; death, 121.

BRAMLETTE, GOV. THOMAS E.—Proclamation to the officers of election, 404.

Brasil.—Emperor and heiress apparent, 121; General Legislative Assembly, 121; ministerial departments, 121; American minister, 121; area and population, 122; budget, 122; army and navy, 122; exports and imports, 122; movement of shipping, 122; wars with Uruguay and Paraguay, 122; immigration of Southerners, 122; explorations, 280, 281.

Bremen.—Government, 122; area and population, 122; revenue, 122; army, 122; movement of shipping, 122; exports and imports, 122.

BREMER, FREDERICK.—Birth, 122; education, 122; works, 122; visit to America, 122; visits to England and the south of Europe, 123; death, 123.

British North America.—Governor-General and aides-de-camp, 123; Canadian cabinet, 123; Lieutenant-Governors of Nova Scotia, New Brunswick, Newfoundland, Prince Edward Island, 123; raids, 123, 124; codification of statutes of Lower Canada, 123; Federal union, 123-126; Attorney-General Macdonald on Federal union, 124; delegation to England, 125; letters of Edward Cardwell to the Governor-General and to the Lieutenant-Governor of New Brunswick, 125, 126; Sir Narcisse F. Belleau succeeds Sir E. P. Taché as Canadian Premier, 126; "Confederate Council of Trade," 126; trade commissioners, 126; trade with the West Indies, 127; foreign commerce, 127; internal improvements, 127; Red River settlement, 127; St. Albans raiders, 127, 128; escape of Burley, 128; death of President Lincoln, 128; militia movements, 128; camp of military instruction, 128; number of volunteers and militiamen, 128; seat of Government removed to Ottawa, 128; Canadian public debt and finances, 128; canal tolls, 129; reciprocity treaty, 129; remarks of Mr. Galt, 129; trade of the maritime provinces, 129; internal trade, 130; confederation in Nova Scotia, 130; Sir W. F. Williams succeeds Sir E. G. Macdonnell as Governor of Nova Scotia, 130; confederation in New Brunswick, 130; trade of the United States with the British provinces and other countries in 1864, 131; tonnage entered from British provinces and other countries in 1863-'64, 131; Canadian exports and imports in 1864-'65, 131; tonnage of British and foreign vessels entered and cleared, 131; table of imports from Great Britain, the United States, and other countries, 131; table of exports, 132; table showing the imports and exports, revenue, and expenditure, population, etc., of the maritime provinces, 132; explorations, 279.

BROUGH, JOHN.—Birth, 132; political career, 132; death, 132.

BROWNELL, THOMAS CHURCH.—Birth, 132; labors, 132; death, 133.

Brunswick.—Reigning sovereign, 133; area and population, 133; religious statistics, 133; Legislative chamber, 133; budget, 133; debt, 133; army, 133.

BUTKED, JUDGE.—Opinions in the case of Thomas C. A. Dexter, 417-420.

C

California.—Area and estimated population, 134; climate, 134; soil, 134; grain crops, 134; root crops, 134; stock-raising, 134; forest trees, 134; fruits, 134; number of vines in 1864-'65, 134; prices of fruits, 134; tobacco, rice, and silkworms, 135; uncertainty of land titles, 135; Board of Agriculture, 135; gold, quicksilver, and copper mining, 135; asphaltum and petroleum, 135; eruption of Mount Hood, 135; earthquakes, 135; statistics of public schools, 135; Normal School, 135; colleges, 135. Re-

- form School, 185; Industrial School, 186; State Prison, 186; Legislature, 186; Constitutional amendment ratified, 186; riots occasioned by the news of President Lincoln's death, 186; newspaper offices sacked, 186; explosions, 879.
- CANNON, WILLIAM.—Birth, 186; political career, 186; death, 186.
- CARDWELL, EDWARD.—Correspondence with Gov. Eyre in relation to the insurrection in Jamaica, 450-458.
- CATRON, JOHN.—Birth, 186; legal and political career, 187; death, 187.
- Cattle Plague*.—Origin, 187; ancient ravages, 187; in the ninth, fourteenth, and fifteenth centuries, 187; fatality in Europe in the eighteenth century, 188; permanent on the steppes of Asia, 188; comparative mortality in western Europe, 188; descriptions of the disease, 189; highly contagious, 189; results of experiments with inoculation, 189, 140; first appearance in England, 140; probably imported from Hungary through Holland, 140; ravages in London, 140; orders in council, 140; royal commission, 140; action of the commissioners, 141; methods of disinfection of premises, 141; improvements in stables and cattle-sheds, 141; transportation to market, 142; number of cases in England, 142; estimated number and value of cattle in the United Kingdom, 142; sheep, goats, and swine affected, 142; homœopathic remedies ineffectual, 142; importation of cattle into the United States prohibited, 142.
- Central America*.—Guatemala: president and ministry, 142; area and population, 142; capital, 142; finances, 142; army, 142; imports and exports, 142. San Salvador: president and ministers, 142; area and population, 142; capital, 142; finances, 142; army, 142; imports and exports, 142. Honduras: president and ministers, 142; area and population, 142; capital, 142; Government receipts, 142. Nicaragua: president and ministers, 142; area and population, 142; finances, 142; capital, 142. Costa Rica: president and ministers, 142; area and population, 142; capital, 142; government receipts, 142; revolutionary movement of Gen. Barrios, 142; death of Barrios, 142; death of Rafael Carrera, 142; explorations, 880.
- CHANDLER, ZACHARIAH.—Senator from Michigan, 205; offers resolution relative to ships destroyed, 806.
- CHASE, Salmon P.—Letter to negroes in New Orleans, 515; Speech at Charleston, S. C. 765.
- Chemistry*.—Elements, 143; allotropic States, 143, 144; allotropic conditions of iron, 143; allotropic silicium and carbon in cast-iron, 143; an application of plastic sulphur, 144; compounds, 144-146; solubility of gold in acids, 144; new nitrogen compounds, 144; new compounds, apparently allied to ammonia, 144; solution of metallic oxides in fused caustic alkalies, 144; properties of liquefied carbonic acid, 144; properties of liquefied hydrochloric acid gas, 145; synthesis of organic compounds, 145; acetic and caproic acids, 146; substitutions among alcohol radicals, in their compounds, 146; physico-chemical phenomena and principles, 146-148; permeability of heated metals to gases, 146; dissociation of elements of compound bodies by heat, 146; crystallogenic force, 147; beautiful arborizations, 147; mineral arborizations in solutions of alkaline silicates, 148; efflorescence of crystals, 148; theoretical chemistry, 148-150; saturability as distinct from equivalency, 148; mechanical energy of chemical action, 149; constitution of ammonium amalgam, 150; applications of chemistry, 150-155; processes for obtaining oxygen, 150, 151; extracting iodine, 151; nitrogen, etc., 151; electro-chemical separation of metalloids, 151; a very sensitive reaction for iron, 151; Ozouf's process for carbonic acid, 152; Ozouf's process for white lead, 152; preparation of potash, 152; preparation of nitre, 152; preparation of alum, 152; detection of explosive gases in mines, 152, 153; applications of bisulphide of carbon, 153; extraction of vegetable oils by means of volatile hydrocarbons, 153; preparation of clay with glycerine, for modelling, 153; linoleum and its applications, 154; aniline black, 154; new solvent for aniline dyes, 154, 155; reviving the writing of old documents, 155; Smithsonian Institution, 155; recent publications and papers, 155, 156; new works on chemistry, 156.
- Chili*.—President and ministers, 156; Legislature, 156; area and population, 156; government expenditures, 156; army and navy, 156; imports and exports, 156; movements of shipping, 156; number and tonnage of vessels, 156; difficulty with Spain, 156-158; causes of complaint on the part of Spain, 156; demands of Admiral Pareja, 157; reply of the Chilean minister, 157; position of the Chilean Government, 157; protest of the diplomatic corps against the threatened action of Admiral Pareja, 157; declaration of war, 157; the Spanish blockading fleet, 158; blockade confined to six ports, 158; warlike measures of Chili, 158; capture of the Covadonga by the Esmeralda, 158; capture of a Spanish launch, 158; suicide of Admiral Pareja, 158; blockade confined to Valparaiso and Caldera, 158; alliance with Peru, 158; discovery of mines of coal and gold, 158; additional privileges granted to Protestants, 159; explorations, 882.
- China*.—Estimated population, 159; proposition of the Taipings to the treaty powers, 159; evacuation of Changchow, 159; fate of Burgevine, 159; insurrection in Western Tartary, 159; insurrection of the Nein-fai, 159; Pekin threatened, 160; increase of piracy, 160; Prince Kung degraded, 160; concession in favor of foreign shipowners, 160; treaty with Holland, 160; progress of Catholicism, 160; number of Protestant missionaries, 160; postal communication between Kiakhta and Tientsin, 160.
- Cholera, Asiatic*.—History, 160-163; place of origin, 161; ravages in Asia, 161; at Jessore, 161; at Orenburg and Astrachan, 161; at Moscow and St. Petersburg, 161; at Mecca and Cairo, 161; in England in 1831-32, 161; at Quebec and Montreal, 162; at New York, Philadelphia, Cincinnati, New Orleans, etc., 162; number of cases and deaths in Great Britain and America in 1831-32, 162; sporadic cases, 162; at Karrachee and Teheran in 1846, 162; ravages in Europe in 1848, 162; in America in 1849-49, 162; in California, 163; in the Crimea in 1855-56, 163; at Mecca, in 1865, 163; at Alexandria and Cairo, 163; checked at Constantinople by a great fire, 163; in Italy, France, and England, 163; arrival of the *Atalanta* with cholera on board in the lower bay of New York, 163; ravages in the island of Guadaloupe, 163; statistics of cholera, 163; mortality in various countries, 163; remote and proximate causes, 163, 164; not contagious, but portable, 164; Dr. Snow's theory of the disease, 164; how disseminated, 164; mortality among medical attendants, 164; virulence of cholera poison illustrated, 165; a rigid quarantine and thorough cleanliness imperative, 165; pathology, 165, 166; symptoms, 165; course, 165; duration, 166; treatment, 166-169; Dr. Hamlin's mode of treatment in Constantinople, 167; modes of English and French physicians, 168; first stage easily manageable, 168; opium, 168; injections, 168; chloroform, quinine, laudanum, camphor, and calomel, 168; treatment by missionaries at Constantinople, 169; investigations of Dr. Davies, 169; Dr. Chapman's mode of treatment, 169; failure of homœopathy, 169; immunity of the copper mining region of Rio Tinto, 169; sulphate of copper 169; importance of sanitary measures, 169.

CLARENDON, EARL.—Reply to Mr. Adams in relation to the Shenandoah, 818-815.

CLEMENS, JEREMIAH.—Birth, 169; political career, 170; works, 170; death, 169.

CODDEN, RICHARD.—Birth, 170; manufacturing career, 170; advocacy of free trade, 171; anti-corn-law league, 171; sent to Parliament, 171; large donation from free-traders, etc., 172; advocacy of Parliamentary reform, 172; opposition to the wars with Russia and China, 172; tour in the United States, 173; treaty of commerce with France, 173; an earnest friend of the United States, 173; death, 173.

Codification.—American independence, 173; codifications of the civil law, 173; common law never codified, 173; attempts in New York, 173; commissions appointed, 174; report in 1858, 174; aim of the commissioners, 174; questions as to the merits of the code, 175, 176; in Canada, 176.

COFFROTH, A. H.—Representative from Pennsylvania, 203; On civil prisoners, 239.

COGSWELL, MASON FITCH.—Birth, 176; professional and public career, 176; death, 176.

COLLAMER, JACOB.—Birth, 176; legal and political career, 177; death, 177.

Colombia, United States of.—President and ministry, 177; Legislature, 177; area and population, 177; capital, 177; budget, 177; public debt, 177; army, 177; imports and exports, 177; Panama Railroad, 177; internal troubles, 177; presidential election, 177; foreign policy, 177; civil rights of foreign residents, 177; protest of the United States minister, 178; telegraphic construction, 178.

Colorado.—Situation and area, 178; counties and capital, 178; Territorial government, 178; State organization, 178; vote on the Constitution, 178; vote on the word "white," 178; Legislature, 179; Executive and Administrative Departments, 179; salaries of public officers, 179; do. of judges, 179; pay of members of the Legislature, 179; banks of issue prohibited, 179; ordinance adopting the Constitution of the United States, 179; elections, 179; Executive Department, 179; Supreme Court, 179; application for admission to the Union, 180; action of President Johnson and Congress, 180; population, 180; vast mineral wealth, 180; mining districts, 180; agricultural interests, 180; grasshoppers, 180; irrigation, 180; sheep-raising, 180; new roads, 181.

Commerce.—Value of domestic and foreign produce exported in 1862-'65, 181; value of imports and exports in 1862-'65, 181; tonnage in 1860-'65, 181; value of imports and exports in 1849-'65, 181; tonnage of districts of New York, 181; exports of staple productions in 1859-'65, 182; clearances from the port of New York in 1852-'65, 183; American and foreign shipping at New York in 1850-'65, 183; treasure movement at New York in 1859-'65, 183; number of arrivals and tonnage of American and foreign vessels at New York from 1821 to 1863, 183; influence of Southern privateers, 183.

Commercial Intercourse.—Provision of the act of July 13, 1861, 194; licenses to trade on the Mississippi, 184; appointment of agents, 184; order of Gen. Grant stopping trade in Virginia, 184; contracts affected by the order, 184; ports declared closed by President Lincoln on April 11th, 184; restrictions removed by President Johnson, April 29th, 184; Mr. McCulloch's trade regulations, 185; Confederate cruisers in neutral ports, 185; instructions respecting trade regulations, 185; President Johnson's proclamation raising the blockade, etc., 185; further removal of trade restrictions, 186; proclamation respecting Tennessee, 186; final proclamation removing all restrictions, 186; International Trade Convention at Detroit, 186; proposed enlargement of New York canal, 186; and of the Welland and St. Lawrence Canals, 187.

CONANT, HANNAH O'BRIEN CHAPLIN.—Birth, 187; works, 187; death, 187.

Confederation.—See *British North America*.

Confederate States.—Breaking into fragments, 183; reduction of forces in the field, 183; desertions, 183; finances, 183; cotton unavailable, 183; depreciation of paper money, 183; value of gold in currency at Richmond in 1861-'65, 183; firmness of the Southern leaders, 183; letter of Jefferson Davis in relation to the appointment of Gen. Lee Commander-in-chief, 183; advice of the Virginia delegation to Mr. Davis, 189; resignation of Mr. Seddon, 189; address of the Virginia delegation, 189; John C. Breckinridge appointed Secretary of War, 189; action of the Congress, 189; measures for recruiting the armies, 189; efforts of the press to rally the military spirit, 190; measures proposed to improve the condition of the treasury, 190; negotiations for peace discussed, 190; appointment of Peace Commissioners, 190; instructions of Mr. Davis to the Commissioners, 190; effect of the fall of Fort Fisher, 190; causes of Southern reverses, 190; return of the Peace Commissioners, 191; meeting at the African church, 191; speech of Mr. Hunter, 191; remarks of Mr. Benjamin, 191, 192; proposition to arm the negroes, 192; arming the negroes discussed in Congress, 192; objections to the measure, 192; Gen. Lee appointed to command all the armies, 192; order of Gen. Lee of February 9th, 193; reasons urged for his appointment, 193; order of Gen. Lee of February 11th, appealing to deserters, 193; Gen. Lee's views of the future, 193; calling of the slaves into the field urged by Gen. Lee, 193; resolution of the Virginia Legislature in relation to arming the slaves, 193; bill passed by Congress authorizing the employment of negro troops, 194; effect of Sherman's movements, 194; reappointment of Gen. Johnston, and his order of February 25th, 194; financial measures, 194; proposition to impress cotton and tobacco, 194; large arrears due the army, 194; tax bill of the 7th of March, 194; bill to raise coin, 195; peace party, 195; peace measures proposed by Vice-President Stephens, 195; appeal of Congress to the people, 195-198; subsistence of Lee's army endangered, 198; appeal of Lee to the inhabitants of Virginia, 198; effect of the evacuation of Richmond discussed, 198; concentration of Federal forces, 198; last message of Jefferson Davis, 198; new measures proposed, 199; committee report on the message, 199; special bill passed, 199; adjournment of Congress, 199; confidence of the Confederates in the defensibility of Richmond, 199; Sheridan at City Point, 199; movement against the Southside Railroad, 199; Grant's final operations at Petersburg, 199; evacuation of Petersburg and Richmond, 200; General Lee at Amelia Court House, 200; dependence on foragers, 200; sufferings for want of food, 200; scenes on the retreat, 200; retreat on Lynchburg, 200; Grant asks Lee to surrender, 200; Sheridan at Appomattox Court House, 201; Gordon repulsed, 201; scenes at the surrender of Lee, 201; noble bearing of General Grant, 201; last words of Lee to his troops, 201; seat of government removed to Danville, 201; Semmes intrusted with the defence, 201; successive movements of Mr. Davis and his cabinet, 201; delay at Charlotte, 202; negotiations between Sherman and Johnston, 202; flight of Mr. Davis and cabinet, 202; demoralization of the cavalry escort, 202; capture of Mr. Davis, 202; demoralization among the slaves, 202; cessation of hostilities, 202.

Confiscation.—Steps taken in Richmond, 202; results of sales of property in New Orleans, 202; case of Leroy M. Willey, 202; proceedings suspended in reorganized States, 203.

Congregationalists.—National Council, 208; prominent delegates, 208; States represented, 208; address to President Johnson adopted, 208; reply of the President, 208; resolutions on the state of the country reported, 208; excursion to "Forefathers' Rock," 208; new declaration of faith, 208; resolutions on polity, 204; report on raising money for evangelization, 204; Congregational house in Boston, 204; report on "The fearful spread of Papacy," 204; general collection on December 17th, 204; Congregationalism in Missouri, 204; in Maryland, 204; in Louisiana, 204; statistics of Congregationalism in Europe and the British colonies, 204; churches in the London postal district, 204; Memorial Hall fund, 204.

Congress, Confederate.—See *Confederate States*.

Congress, United States.—List of members, 205; the second session of the 36th convenes, 205; passage of a joint resolution to notify Canada of the termination of the reciprocal treaty, 205; resolution relative to ships destroyed, 206; do. on the right of Congress to prescribe the foreign policy of the Government, 206.

In the House, a motion to reconsider the vote on the amendment of the Constitution abolishing slavery, 206; if slavery is wrong, it is our duty to abolish it, 206; what constitutes two-thirds of both Houses? 206; it has been decided two-thirds of a quorum can pass this amendment, 206; objected that if all the States save one adopted it, then it would not legally become a part of the Constitution, 207; the supreme power of the national Government is vigorously maintained throughout the Constitution, 207; how can any man defend the State sovereignty dogmas? 207; amendment to be submitted, 207; we only authorize the action of the people, 208; what would be the status of slavery if the war should end now? 208; the whole question would remain to be disposed of, 208; the people have responded in favor of emancipation, 208; are the Southern States foreign powers? 208; if they are not out of the Union, then they are among the number of the three-fourths required, 209; it makes us assume the character of aggressors, 209; on the same grounds the other regulations of States may be interfered with, 209; it is proposed by this amendment that the States in which slavery exists shall have no vote, 210; the question is simply one of power, 210; attempt to sweep away the reserved rights of the States, 210; improper time to amend the fundamental law of the country, 211; the right of amendment is limited by the Constitution, 211; by its intent and spirit and its foundation idea, 212; can three-fourths of the States subvert the State governments of one-fourth? 212; the States do not derive power from the Federal Government, 213; if a convention of States can take jurisdiction to protect property, they can to destroy, 213; the power of unlimited amendment is an element of democracy, 213; danger of an amendment at this time, 214; arguments against the amendment, 214; the lack of power examined, 215; every power granted by the Constitution is complete in itself, 215; the words of Washington about "specious pretexes," 216; motion to reconsider carried, 216; joint resolution passed, 216; further proceedings, 216, 217.

In the Senate, a bill to abolish the disqualification of persons carrying the mails by reason of color, passed, 217; yeas and nays, 217.

In the Senate, the bill to grant freedom to the families of colored soldiers considered, 217; moved to refer to the judiciary committee, 217; the needs of the country have weaponed the hands of the slave, 217; the nation needs defenders, 217; how can Congress free the servant who is held in servitude by the laws of a State? 218; where is the power under the Constitution to do

this? 218; can Congress take private property without making just compensation? 218; what is the object of the measure? 219; this constitutional power is doubted by many, 219; we may and probably shall have to pay for them, 219; has the doctrine of military necessity gone so far that when we are in a state of war, whatever Congress shall decree is constitutionally decreed? 219; Congress has the same power to enfranchise the families that it has to enfranchise the colored soldier, 220; motion to refer to the judiciary committee lost, 220; parts relative to the question, 220; the power to enfranchise a colored soldier has not been shown yet, 221; if we free the wives and children of those who are soldiers at present, we leave them more free to fight, 221; we have passed on our right to conscript and enlist the slave, 221; expediency of the measure obvious, 221; we have no authority to pass the resolution, 222; if a slave becomes free under a power of the Constitution on calling him to the army, his family does not, 222; resolution adopted, 223. In the House, the resolution considered, 223; these measures not introduced for the purpose of supplying soldiers, 223; will strengthen the arms of the colored soldiers, 224; resolution passed, 224.

In the House, a resolution relative to prisoners offered, 225; obstacles to an exchange demanded, 225; a long history connected with this subject, 225; the resolution implies remissness on the part of the War Department, 225; the public sentiment of the country demands the information, 225; resolution adopted, 225.

In the Senate, a resolution relative to exchange of prisoners, 225; condition of Union prisoners, 226; no retaliation made, though promised, 226; referred, 227; a resolution on retaliation considered, 227; report, 227; condition of our men will not be made better at the South by retaliation, 227; retaliation, in all ages, a means of bringing savage foes to a sense of their duty, 227; something in the way of a fair exchange, 228; the present condition of the contest, 228; amendment moved, 228; we have no precedent in our own history, 229; retaliation is a part and parcel of the law of war, 229; it is unnecessary to argue this question, 230; the barbarities committed on our men at Andersonville are indescribable, 230; it is urged we can afford in a military point of view to leave our soldiers, 230; high time Congress should look into the matter, 231; why has not the cartel been carried out? 231; efforts of the Opposition to make the Administration odious, 232; retaliation does not apply to a case of antecedent outrages, 233; is it expedient even if we have the power? 233; where is the struggle to end? 233; the law of retaliation has limits, 234; it is said if the treatment of our colored prisoners was the only obstacle, they ought to be left in prison, 234; a monstrous proposition, 234; what is the simple proposition submitted? 235; the refusal of this Government to exchange has wrought up the soldiers of our armies and the people to the prosecution of this war with an energy unknown to any other people, 235; amendment agreed to, 236; resolution adopted, 236.

In the Senate, a resolution as to requiring the inhabitants of the District of Columbia to take an oath of allegiance, 236; debate on the resolution, 237; adopted, 238; a bill requiring an oath of attorneys considered, 238; passed, 238.

In the House, a resolution relative to persons arrested, 238; cases of persons in confinement, 238; one case requires the adoption of the resolution, 239; other cases, 239; propriety of the investigation, 240; the law not violated under one department of the Government more than another, 240; other resolutions, 240.

In the Senate, a motion to strike out the section of the

appropriation bill requiring that no person should be tried by military commission where the courts were open, 241; what business has this proposition on an appropriation bill? 241; all the machinery of civil and criminal courts cannot punish one hundredth part of the rebels North and South who deserve to die, 242; our fathers fought in vain, 242; but for the strong arm of power there would be no country to-day, 242; such acts as this section seeks to avoid have arrayed nearly one-half the people against the Government, 243; act of justice to the Secretary of War, 243; his order, 243; you are setting an example utterly subversive of the Constitution, 244; this section proposes to liberate rogues and conspirators now confined in prison, 244; rather than allow this section to pass, I would see this appropriation bill and all others in perdition, 244; shall there be above the Senate and House a power to place a man on trial? 245; contrast the course of the law with the course adopted since the commencement of the war, 245; motion to strike out prevails, 246.

In the House, a bill to guarantee certain States a republican form of government considered, 246; the bill, 246-248; amendments moved, 243; general propositions of the Declaration of Independence, 248; the Government was instituted to secure the rights of all the citizens, 249; the demon of agitation will haunt us if we ignore the rights of these four million negroes, 249; substitute offered, 249; amendment to the substitute offered, 250; no work more momentous than bringing the States back to the Union, 250; features of the bill, 250, 251; history of the bill, 251, 252; the President's plan of reconstruction, 252; his views of the bill of last session, 252; the President's will undo the work of his friends in the last Congress, 253; case of Arkansas, 253; Louisiana, 253; what does this bill contemplate and propose? 253; a temporary Provisional Government over States in rebellion, 253; confirmation of emancipation, 254; disfranchisement of civil and military officers of the Confederacy, 254; formation of new State constitutions, 254; to incorporate certain conditions, 254; if the State refuses these conditions, it is to remain a Territory, 254; what is the effect of all this? 254; the bill is one to abolish slavery and to enfranchise the negroes, and disfranchise white men, 255; to change the social and industrial system of eleven States, 255; where is the power of the Government to do these things? 255; the same bill received the assent of the last Congress, 256; state the case and predict results from one course or the other, 256; bill laid on the table, 257; another bill reported, 257; laid on the table, 257.

In the House, a bill to forfeit the fee of insurgent landholders, 258; passed, 258.

In the Senate, a joint resolution to exclude the electoral vote of certain States, 258; amendment moved to except Louisiana, 258; a distinction between Virginia and Louisiana, 258; if we decide to receive her vote, we decide a State government to be in existence there, 259; position of that State, 259; none of these States can be out of the Union, 259; are the local authorities of Tennessee, Louisiana, and Arkansas, now in insurrection? 260; is it competent for Congress to legislate with reference to counting the electoral votes? 260; have we any guide in the Constitution? 260; it is not silent on this subject, 260; part of wisdom to settle this question, 261; this is all wrong, all uncalled for, 261; amendment proposed, 262; has Congress any authority to legislate on this subject? 262; are the votes of States in rebellion to be counted? 263; to restore the States to their rights, is it necessary to enact a law that the rebellion was suppressed? 263; the act of Congress and the declaration of

the President, 264; what are the facts about these acts? 265; will we carry out the arrangement of the President, or violate it? 265; effect of this joint resolution, 266; what is it proposed to answer to the loyal minority of Louisiana? 266; can any portion of a State attempt to govern the whole? 267; motion to postpone, lost, 268; what is the actual state of the case in relation to Louisiana? 268; the policy of the President is denounced as a military usurpation, 268; has Congress no power to act on the question whether those States should be reorganized or not? 269; the power of the United States over a conquered State is the ordinary power of a conqueror over the conquered, 269; motion to except Louisiana lost, 270; joint resolution passed, 270; passed in the House, 271.

In the Senate, an amendment of the Constitution in reference to representation offered, 271.

Counting the electoral votes, 271-274.

In the Senate, a motion to refer the credentials of Joseph Segar, successor of L. J. Bowden, of Virginia, deceased, to the judiciary committee, 274; the credentials are proper on their face, 274; there was no such objection made to the predecessor, 274; duty of the committee to ascertain if these credentials come from a proper source, 275; the whole country needs to be enlightened on this question, 275; its magnitude not exaggerated, 276; we are a progressive people, 276; duty of the Senate to inquire into the origin of credentials, 276; state of the question, 277; laid on the table, 278.

In the Senate, a joint resolution recognizing State government of Louisiana, 278; amendment moved and lost, 278; whence does the President derive the power to prescribe the qualifications for voters in Louisiana? 278; how was the government formed? 279; in what respect is it not republican in form? 279; no act of secession can take a State out of this Union, 279; can the Government thus interfere with the right of suffrage in a State? 279; propositions stated, 280; an amendment offered in the form of a bill, 280; words of the President's proclamation, 281; nature of the State governments, 281; definition of a State in the Union, 282; how it becomes out of the Union, 283; what the laws of nations allow the conqueror, 283; the Government must hold the South in the iron gripe of war, 284; has it the same rights of conquest over a State? 284; it must be final judge how long military occupation shall last, 284; the facts out of which this question has arisen, 285; the judiciary committee thought it not to be in the power of the President to bring the States back, but Congress could do it, 285; objections to this opinion, 285; in what way can a State come back? 286; qualifications of electors to be prescribed by the State, 287; nature of the amendment proposed, 287; there is a strife here, 288; the question is, What is to be done with four million negroes? 288; shall one-third of this body be permitted to delay an important bill? 288; a stupendous hoax, 289; prior orders taken up, 289.

In the Senate, a resolution never to recognize the Confederate debt adopted, 289.

In the House, a resolution relative to the sovereign capacity of the President offered, 289; do. relative to terms of negotiation, 290; laid on the table, 290; resolution on apportionment of representation, 290; adopted, 290; other resolutions offered, 291.

In the Senate, a call for the proceedings of the recent Peace Conference, 291, 292.

In the House, a bill relative to freedmen's affairs reported, 292; it will not accomplish the object desired, 292; its features, 292, 293; what it proposes to repeal, 293; objections considered, 294; extracts from a con-

- munication to the President, 294, 295; further debate, 295; report agreed to, 296; report of committee of conference considered in the Senate, 297; debate, 298; adopted, 299; the bill, 299.
- In the Senate, oath administered to Vice-President Johnson, 300; his address, 300.
- Connecticut*.—Assembling of the Democratic Convention, 301; resolutions, 301; assembling of the Republican Convention, 301; resolutions, 301; result of election, 302; State debt, 302; valuation of property, 302; school fund, 302; railroads, 302; banks, 302; troops furnished, 302; vital statistics, 302; resolution of Legislature on national affairs, 302; action of the Legislature on granting the suffrage to colored men, 304; vote of the State on the question, 304.
- CORNNES, JOHN.—Senator from California, 205; on trials by military commission, 244; on reconstruction, 263.
- Conspirators*.—See *Military Commission*.
- COEWIN, THOMAS.—Birth, 304; career, 304; death, 304.
- Costa Rica*.—See *Central America*.
- COSTELLO, DUDLEY.—Birth, 304; pursuits, 304; death, 305.
- COWAR, EDGAR.—Senator from Pennsylvania, 205; on retaliation, 229; on trials by military commission, 245; on the electoral vote of Louisiana, 263-267; on the admission of a Senator from Virginia, 274.
- COX, SAMUEL S.—Representative from Ohio, 205; on the amendment to the Constitution, 218; on the exchange of prisoners, 225; on civil prisoners, 229.
- CROCKER, NATHAN B.—Birth, 305; education, 305; career, 305; death, 305.
- D**
- DAVIS, GARRETT.—Senator from Kentucky, 205; on giving freedom to families of colored soldiers, 218-221; on exchange of prisoners, 221-224; on the electoral vote of Louisiana, 265.
- DAVIS, HENRY W.—Representative from Maryland, 205; offers a resolution on foreign affairs, 206; on civil prisoners, 228-240; on reconstruction, 256; birth, 305; legal and political career, 305; death, 306.
- DAVIS, JEFFERSON.—Reply to the Virginia Legislature in relation to the appointment of Gen. Lee as Commander-in-chief, 188; memorial of the Georgia Convention for the release of, 307; message to the Congress at Richmond, March 12, 1865, 717; petition in his favor from the ladies of Abbeville District, S. C., 766; proclamation offering a reward for the apprehension of, 302; resolution of the Virginia Legislature praying his release, 318.
- DAVIS, THOMAS T.—Representative from New York, 205; on the amendment to the Constitution, 210.
- DAWES, HENRY L.—Representative from Massachusetts, 205; on reconstruction, 250.
- DELANOY, WILLIAM HEATHCOTE.—Birth, 306; education, 306; labors, 306; visits to England, 306; death, 306.
- Delaware*.—Area and population, 306; financial resources, 306; national banking system authorized, 307; internal improvements, 307; slavery abolished, 307.
- Denmark*.—King and heir apparent, 307; reduced area and population, 307; dominions, 307; inhabitants in large cities, 307; statistics of churches, 307; debt and finances, 307; army and navy, 307.
- Dialysis*.—Utilization of brine, 307; Mr. Whitelaw's mode of freshening salt meats, 307; Dr. Morgan's mode of preserving the flesh of animals, 308; detection of vegetable poisons, 308.
- DIMAN, BYRON.—Birth, 308; education, 308; acquirements, 308; career, 309; death, 309.
- Diplomatic Correspondence, etc.*—Recognition of the end of the war by Earl Russell, 309; Secretary Seward's letter to Sir F. W. H. Bruce, 309, 310; his note to Secretary Welles, 310; the cruiser Shenandoah, 310; letter of Mr. Adams to Earl Russell in relation to the Shenandoah, 311-313; delivered up to the United States Consul at Liverpool, 313; Earl Clarendon's reply to Mr. Adams, 313-315; second letter of Mr. Adams, referred to as an answer to Earl Clarendon, 315-319; Southern emigration to Mexico, 319; Mexican complicity with the rebels, 320; Dr. Gwin's schemes, 320; the French occupation, 320, 321; non-recognition of Maximilian, 321; the Charles Windsor extradition case, 322; opinion of Mr. Justice Smith in relation to the St. Albans raiders, 322, 323.
- DOOLITTLE, JAMES R.—Senator from Wisconsin, 205; on reconstruction, 263, 269.
- DRATTON, PIERCEVAL.—Birth, 323; naval services, 324; death, 324.
- DUNNE, WILLIAM J.—Birth, 324; career, 324; death, 324.
- DUPIN, ANDRÉ MARIE JEAN JACQUES.—Birth, 324; legal and political career, 324; death, 324.
- DU PONT, SAMUEL FRANCIS.—Birth, 325; naval services, 325; death, 326.
- E**
- EASTLAKE, SIR CHARLES LOCK.—Birth, 326; pictures and works, 326; death, 326.
- Ecuador*.—Ministerial departments, 326; area and population, 326; chief cities, 326; value of exports, 326; insurrectionary movement, 326.
- EDGARTON, JOSEPH.—Representative from Indiana, 205; on reconstruction, 251.
- Electoral Votes*.—Counted by Congress, 271-274.
- ELIOT, THOMAS D.—Representative from Massachusetts, 205; on reconstruction, 249; on freedmen's affairs, 294-296.
- Europe*.—Territorial change, 327; peaceful relations, 327; distant wars, 327; elections in England, Italy, and Spain, 327; municipal elections in France, 327; the Progressive party in Sweden, 327; affairs in Hungary, 327; in Prussia, Germany, and Russia, 328; telegraphic communication with America, 328; growth of shipping of various countries, 328; proportion of sailors to number and size of ships, 328; geographical explorations, etc., 324.
- EVERETT, EDWARD.—Birth, 328; education, 328; early career, 329; political life, 329; visit to Europe, 330; Minister to Great Britain, 330; Secretary of State, 330; in the Senate, 330; nominated for the Vice-Presidency, 331; death, 331; characteristics, 331; personal habits, 332.
- F**
- Fenian Brotherhood*.—Origin, 332; organization, 333; oath, 333; Congresses at Chicago and Cincinnati, 333; Congress at Philadelphia, 334; new constitution, 334; release of John Mitchell, 334; the organization in Ireland, 334; escape of James Stephens, 335; alarm in the British American provinces, 335.
- Finances of the United States*.—Actual receipts and expenditures for the first quarter of the fiscal year, 335; estimates for the remaining three-quarters, 335; excess of actual receipts and expenditures over estimates, 335; laws authorizing loans, 335; amount of loans authorized, 336; receipts of the Government from extraordinary sources, 336; total expenditures, 336; items of increase and decrease of the public debt, 336; amount of United States notes or currency in circulation, 337; fractional currency outstanding, 337; actual receipts and expenditures for the first quarter of the fiscal year, 1866, 337; estimates for the remaining three-quarters, 337; estimates for 1867, 337; legal tender notes in circulation,

- 837; notes furnished to national banks, 837; treasury and compound interest notes, 837; total amount of paper money, Oct. 31, 837; question as to its legality, 837, 839; tabular statement of the national debt on June 30, 838; bank note circulation at various periods, 839; inflation of prices, 839; gold balance against the country, 839; contraction of the currency, 839, 840; the Secretary of the Treasury on the payment of the national debt, 840, 841; table of the public debt from 1791 to 1865, 841; table of the value of real estate and personal property in the States and Territories in 1850 and 1860, 841; value of farms, live stock, etc., 842; agricultural products, 842; other products, 842; sales of gold coin, 842; value of bullion deposited at the mint and branches, 842; coinage, 842; commercial intercourse with the Southern States, 842, 843; table of the annual product of manufacturing industry, 843; tables of the price of gold for 1863, 844; for 1863, 845; for 1864, 846; for 1865, 847; prices of Government paper at New York for 1865, 848; prices of railroad shares in 1865, 848; gold and silver deposited at the mint and branches since 1847, 848; gold and silver of domestic production deposited, 848; prices in New York of leading articles of commerce for eight years, 849; business failures in the Northern States for nine years, 849.
- Vine Arts.*—In England, 850; enormous rise in the value of pictures, 850; sale of Mr. Wallis's collection, 850; of Mr. Blackburn's, 850; of Mr. Reeves's, 850; of Mr. Knowles's, 850; of John Leech's sketches, drawings, etc., 850; and of those of David Roberts, 851; sales of collections of water-color drawings, 851; annual exhibitions, 851; mural decorations of the Houses of Parliament, 851; Church's pictures in London, 851; embellishments of St. Paul's Cathedral, 852; restoration of St. Patrick's Cathedral, 852; plastic art, 852; acquisitions of the British Museum, 852; South Kensington Museum, 853; Royal Academy, 853; wood engraving, 853; new method of decorating pottery, 853; deceased artists, 853.
- In France, 853; sale of Count de Pourtales-Gorgier's collection, 853; of Baron Grootelinsdt's gallery, 854; of the Duc de Morny's collection, 854; mural pictures at the Hotel des Invalides, 854; exhibitions of water-color drawings, 854; architectural improvements, 854; plastic art, 854; Doré's illustrated edition of the Bible, 854.
